

Genetically Engineered Food Could Be Lifeline For Developing World, Cornell Researcher Suggests

WASHINGTON, D.C.—In the developed world, societies enjoy abundant diets more varied now than at any other time in history. That's in stark contrast to the developing world where millions of people confront profound food insecurity every day. Part of the solution to righting this imbalance might involve something that is increasingly controversial in the developed world: genetically engineered food.

Cornell University's Susan McCouch, associate professor of plant breeding, asks if it is ethical for well-fed people in the United States, Canada, and Europe to ignore the potential of biotechnology to improve the nutritional status of hungry people around the world, particularly when the same technology is being used to extend life expectancy by producing pharmaceuticals. McCouch made her observations in her talk, "Is Biotechnology the Answer?" at the annual meeting of the American Association for the Advancement of Science in Washington, D.C.

If used appropriately, agricultural biotechnology can help alleviate world hunger and malnutrition, said McCouch, noting the development of genetically engineered rice to produce iron or provitamin A (beta carotene) as an example of a product that has the potential directly to improve the quality of life for millions.

"People who suffer from malnutrition generally lack essential levels of micronutrients because they lack the purchasing power to obtain sufficient diversity in their diet," said McCouch. The

impact of delivering those essential micronutrients through food products such as enriched yellow rice is parallel (in the United States) to fortifying milk with vitamin D, salt with iodine, or orange juice with calcium." Transgenic rice, she noted, offers immediate assistance as a staple food to people in need.

McCouch said she believes there is evidence of public support for the use of genetic engineering to improve diet and nutrition in the developing world. In her view, people support the technology when they see societal benefits, not just corporate benefits. Some opinion surveys show that people initially are uncomfortable with the idea of using biotechnology to transfer genes between organisms, she said, but those reservations can be overcome if people perceive a particular ethically or morally persuasive benefit.

McCouch said that careful consideration must be given to different kinds of agricultural systems around the world, and the risks weighed against the benefits to those different systems. "Clearly, not all people have the same choices nor will they have the same preferences," she said.

While the term biotechnology was originally coined during the industrial revolution, it has evolved into its contemporary meaning only in the last 25 years, which McCouch defined as modifying living things to suit human needs and preferences.

"According to this definition, humans have practiced biotechnology for about 10,000 year, or as long as they have practiced agriculture," she said.

"Most of our domesticated food and fiber species have been altered through traditional crossing and selection to such an extent that they are no longer capable of surviving in the wild," said McCouch. Instead they prosper when nurtured and cultivated by human beings. The interaction of natural processes and human activity has given rise to novel agro-ecosystems and is responsible for generating and sustaining a vast array of genetic and ecological diversity on the planet.

Today, most people associate biotechnology with genetic ma-

nipulation at the DNA level, said McCouch. But not all biotechnology involves genetic engineering. "A large part of what biotechnology represents today is new knowledge about the natural processes of DNA replication, breakage, ligation and repair that has paved the way for a much deeper understanding of the mechanics of cell biology and the hereditary process itself."

This new knowledge, she said, has brought us to the edge of an ethical dilemma. While the ability to manipulate the hereditary process is not new, the depth of

our understanding of this process has changed and the knowledge we have gained has opened up an endless array of possibilities for affecting future evolutionary trajectories.

"How the potential of the human imagination and creative spirit should be nurtured, guided, interpreted and ultimately directed and controlled with respect to biotechnology is a question of profound social, economical and ethical dimensions," said McCouch. "It deserves to be discussed, contemplated and digested at all levels of society."

Lancaster County Conservation District Conducts Seeding Sale

LANCASTER (Lancaster Co.)—The annual tree seedling sale of the Lancaster County Conservation District is in progress. Deadline for placing orders is March 10. All prepaid orders can be picked up April 7 at the Kiwanis Pavilion located in Lancaster County Central Park.

For the past 26 years, the district has been a local source of affordable plant materials for tree, shrub, and groundcover plantings. Proceeds from this sale benefit environmental education activities in the county.

Among the sale items this year are bare-rooted conifer and hardwood seedlings, three types

of groundcover, an assortment of potted stock including native shrubs, ornamental grasses, hosta, day lilies, and ornamental flowering fruit trees. Several popular varieties of apple trees

will be available for purchase on the pickup date.

If you would like to receive an order form, call (717) 299-5361, ext. 5

Our 20,000 Sq. Ft. Facility Enables Us To Serve You Better

Your One-Stop Hydraulic Shop

Beiler Hydraulics is a Full Service Facility Specializing in:

- **Engineering**
All types of hydraulics & pneumatics
- **Air Compressors**
Complete Rebuilding of all brands
Road service
Lots of parts in stock
- **Cylinders**
Complete rebuilding
New parts machined
Custom built cylinders
- **Machinery conversions**
Hydraulic & pneumatic
- **Pumps & Motors**
Complete rebuilding of all brands
Lapping & resurfacing
Authorized build center for Permco
- **Fully Equipped Service Truck**
Hydraulic installations
Maintenance
Repair
- **Truck Systems**
Wet line installation
Trouble shooting
- **Hose Assemblies**
Made to order
- **Hydraulic Power Units**
Custom built to your specifications
Gas or electric
Stationary or portable

Beiler Hydraulics

440 Concrete Ave • Leola, PA 17540 • 717-656-4878 • Fax 717-656-4682

Est. 1979

Hauls Everything From Tools to 10-Pointers.

The new Polaris RANGER takes you where your pickup can't. Whether you're on the farm, the construction site or deep in the woods, RANGER gets the job done with outstanding power, easy handling and a comfortable ride.

- Liquid-cooled 4-stroke 500 engine
- Automatic transmission with hi/lo range and reverse
- True 6-wheel drive at the push of a dash-mounted switch
- All-shaft drive front, center, and rear
- Side-by-side seating, steering wheel
- Hydraulic disc brakes, front and rear
- 1,500 lb towing capacity
- Accessories include winch, blade, electric box assist and more
