

If you were to ask local corn growers about Basis Gold® this is what they would say:

"With four years of Basis Gold® use on our farm, I have learned that the best corn herbicide program is 1 pt. of Dual at planting followed with Basis Gold® + 3 oz. of Banvel. This has eliminated Fall panicum problems and does what I like to see done to Canada thistle.

Basis Gold® saves me money and eliminates the crop damage from late post broadcast herbicides too.

"This year Basis Gold® will be on all 600 acres of our conventional corn and no-till corn."

"I have been farming most of my 57 years; Basis Gold® is the best weed control I have ever experienced.

One-trip Basis Gold® cut in half my bill for hard-to-control weeds. No Velvetleaf, Lambsquarters, Quackgrass or Fall panicum. We did not need to re-spray any of the 1,400 acres of Basis Gold®

Unlike what I have experienced in the past, Basis Gold® did not hold my corn back, which resulted in higher yields, earlier maturity and lower drying costs. Basis Gold® saved me a lot of money this way too."

"It was a difficult year for weed control in most corn fields in this area last year; several growers saw our corn fields and wanted to know what we used to keep them so clean.

We switched to Basis Gold® on almost all 2,500 acres of corn. Our main programs was .33 oz. Basis + 1 lb. Princep in March after we deep ripped, then followed with 14 oz. Basis Gold® + 2 qt. nitrogen + crop oil on 6 inch corn.

One of our irrigated corn hybrids with Basis Gold® - averaged 226.69 bushels on 165.4 acres. We would like to stay with what works, and will be using the same weed control this year."

Basis Gold® one trip

"We used total post weed control on 1800 acres of corn. Our Basis Gold® program on 600 acres was one trip with 14 oz. Basis Gold® + 3 oz. Banvel for Fall panicum, Foxtails and Canada thistle

We have found we are only fooling ourselves thinking we can use a full rate of a pre-product then trying to spot spray to clean up escapes; we usually realize at harvest that we should have resprayed all the acres postmerge

Based on our Basis Gold® results, present thinking is to use at least as much Basis Gold® this year and will likely increase to 1,200 acres of Basis Gold® on this year's corn crop. The residual advantage in Basis Gold® is important to us"

"Our NCGA winning entry came from an old cow pasture field that has soil with excellent moisture holding capacity and is loaded with lots of weed seeds including giant ragweed plus several different kinds of grasses; I figured ahead of time it would take a two pass program to end up with clean corn.

Basis Gold® cleaned the field up and it did not effect the corn at all. Basis Gold® is a great value too."

"Our experience was with 14 oz. Basis Gold® + 4 oz. Banvel on 1,200 acres where we expected the worst weed problems like Fall panicum & triazine resistant weeds. We used one trip with Basis Gold® on conventional tillage and applied Princep early followed by Basis Gold® + Banvel postemergence on no-till. Basis Gold® worked well and is a lower cost program than what we had been using.

We like how Basis Gold® enables us to use fewer plastic jugs and get away from the liability of carrying bulk herbicides on our trucks. We also like the way the corn jumps out of the ground with a Basis Gold® program.

It was our best irrigated corn crop ever. We keep learning more about how to do it right every year; our two best irrigated hybrids treated with Basis Gold® averaged about 230 bushels/acre. I see more Basis Gold® planned this year."

"Last year our corn yields weren't the best because of the dry weather. Our weed control program gave us clean corn despite the dry weather. This is the second year we used Basis Gold® for problem weeds like Lambsquarters, Foxtail, Shattercane and Johnsongrass. We will be using Basis Gold® again for the third straight year."

Tom Frey, President  
Frey Dairy Farms, Inc.  
Conestoga, PA

"What was frustrating me was the large number of acres we were spraying twice. Our pre-emergence sprays were failing. I was looking for a better way. Then we tried Basis Gold®. Since using Basis Gold®, we've done very little re-spraying. Weed control isn't always perfect, but it is very acceptable. For three years Basis Gold® has been our main herbicide program. We will use it again this year on our 700 acres of field corn.
