Senior division: 1. Thomas Harwood. 2. Amy Kulick.

Intermediate division: 1. Scott Walton. 2. Amy Kaucher.

Junior division: 1. Jan Stamy. 2. Sarah Wickard.

Champion: Thomas Harwood.

## (Continued from Page A10)

prices. This is an outrage. Family farms provide a work ethic important to society. In today's society many seem to think that only the less intelligent need to do manual work. Many young people today are unwilling and nearly unable to do physical work. This will have serious consequences in the future. Farms also are very important in maintaining agricultural support services. Every farmer realizes the importance of this. I cannot think of an example in history where consolidated agriculture has been efficient in the long term. As the farming population becomes more distant from ownership, they become less productive.

In 1994, the GATT agreement was passed after the elections in a cowardly lame duck session of Congress. Since then unelected. incompetent, and downright treacherous trade negotiations have sold out important segments of our economy, and common sense solutions are smugly sneered at as not being "GATT" legal. Since economist and politicians have said that higher farm gate milk prices will be bad for the "dairy industry" in the long run, they will hurt

growth, efficiency and be bad for the consumers. Actually, high farm prices will slow the frenzied pace of consolidation in farming. This is good. Higher prices should result in greater efficiency as a result of being able to update and improve equipment and facilities. Efficiency should result in less work and a better lifestyle instead of a totally stressed out lifestyle. As far as being bad for the consumers, it could be clearly shown that retail prices trend upward regardless of farm prices. Since 1978, retail prices of dairy products have more than doubled while farm milk prices are essentially the same as they were 22 years ago.

It's time that we wake up and realize that family farms are valuable and efficient. The "raw commodity" that we produce does have a real value based on how much it costs to produce it and should be priced accordingly, even if this requires some form of supply management.

"Indeed the wages of the laborers who mowed your fields, which you kept back by fraud, cry out; and the cries of the reapers have reached the ears of the Lord of Saboath." James 5:4
