

From Harvest To Tillage This

Still Simply the Best.

A Case-IH Rotary Axial-Flow Combine has only ONE moving part in its entire threshing/separating process - a single large-diameter rotor. Open up the side shield on any other rotary combine and compare it to the drive mechanism, and you will see that the Case-IH rotary combine has fewer moving parts, which means fewer problems and easier adjustments. Because the more moving parts there are, the greater your chance of breaking down.

Introducing The New 2001 Model Axial Flow Combines
Making you even **more** productive with the following enhancements

Hydraulic Feeder Reverser

A new hydraulic feeder reverser, located on the left-hand side of the feeder jackshaft replaces the electric feeder reverser on previous models. The reverser will deliver 50% more torque to the feeder driveshaft compared to the output of the electric reverser.

Side Adjust Sieve Ready - All Models

The 2001 model combines will be ready to accept a future side adjust sieve feature. This will be available as a Service Parts Kit.

New View Door and Light

The 2001 models will have a new side-viewing door with a light for easier visibility of the chopper and chaffer sieves.

12 Row Corn Head Capable

Factory options are available for the 2001 model 2388 to be capable of handling the size and weight of the 2200 series 12 row corn heads.

New Fuel Tank

The 2001 Model 2388 combines will have a new 180 gallon fuel tank - a 46% increase in capacity over the 123 gallon tank on previous models.

New Exit Lighting

This feature will enhance visibility when exiting the cab after dark. This light will stay lit for 30 seconds allowing the operator to exit down the ladder safely.
