

# Maryland DHIA Report For December

The December Dairy Herd Improvement information for dairy herds from the DHI processing center in Provo, Utah. The list includes herds from Maryland, Pennsylvania, and West Virginia. The information is listed by herd name, county association, number of cows in the herd and the average production per cow in the herd based on Energy Corrected Milk (ECM). ECM combines milk production and components.

The ECM formula is: (7.2 x lbs. protein) + (12.95 x lbs. fat) + (.327 x lbs. milk). To be included, the herd must have 10 cows averaging 65 pounds or more of ECM per cow, per day. All herds reported are on official DHI or DHIR test. Also listed are the top 10 herds in Maryland for the Brown Swiss, Guernseys, and Jerseys, and the top seven herds for Ayrshires.

## ROASTED BEANS FOR PROFIT

Some of the many advantages of using Roasted Soybeans

- \* All natural protein with no harmful chemicals or fillers
- \* Very high bypass protein, unlike solvent soybean meal
- \* Increases ration palatability to heighten dry matter intake
- \* Includes a broad spectrum of the essential amino acids
- \* High protein and energy, yet low neutral detergent fiber. (NDF)
