Weekly Dairy Market Outlook

Ken Bailey
Penn State

Aug. 31, 2001

Butter Prices
Head Higher

- CME Grade AA butter reaches \$2.23/pound.
- Block cheese prices weaken.
- USDA announces August class prices.

Grade AA butter prices at the Chicago Mercantile Exchange jumped from \$2.1750 per pound on Monday, Aug. 27 to \$2.2250 by Wednesday, Aug. 29. Butter prices remained unchanged on Friday, Aug. 31.

Cash butter prices are \$1 above year ago levels. Some industry insiders are expecting Grade AA butter prices will reach \$2.50 per pound sometime this fall. Others, however, are expecting prices to ease once milk production rebounds later this fall.

While it is very hard to pre-

dict, U.S. butter prices will likely ease sometime this fall. Retail butter prices are now over \$3 per pound. The Bureau of Labor Statistics reported that U.S. city average retail prices for July were \$3.549 per pound, 31 percent higher than a year ago. USDA also reported this week that butter consumption for January through June of this year was down 3.7 percent relative to the same period a year ago. This was likely due to the higher retail prices.

Another factor to consider is that butter imports have been growing this year, particularly from New Zealand. Milk production will seasonally peak in New Zealand in October-November. Thus even more butter imports will be available to U.S. markets. Butter imports into the U.S. market are attractive whenever domestic butter prices on the West Coast exceed \$1.64 per pound. That is based on a high-tier tariff rate of \$0.70 per pound, world butter prices of \$0.65 per pound, and import

costs of about \$0.09 per pound. Butter imports reportedly are selling \$0.20 per pound below Grade AA domestically produced butter.

Cheese prices at the Chicago Mercantile Exchange were mixed this week. Barrel prices held at \$1.68 per pound all week. Block cheese prices, however, declined from \$1.78 per pound on Monday to \$1.72 per pound Wednesday through Friday. Prices have generally been high for cheese because of reduced milk supplies and lower solids levels this summer. Cheese consumption has been relatively steady the first half of the year.

There are two factors that could cause lower cheese and butter prices the last quarter of the year. First is a return to normal milk production levels. Cow numbers appear to be stabilizing. An increase in productivity this fall because of cooler weather and improved forage could bring on more milk. The other factor is the economy. The

real gross domestic product, or GDP, increased at an annual rate of 0.2 percent during the second quarter of 2001. That means the economy is barely growing. Economists are still trying to figure out whether we are in the middle of an economic recession. A slow growing U.S. economy will likely translate into slower sales of dairy products.

USDA reported August 2001 class and component prices. The August federal order class prices with changes from the month before are Class II \$15.98 per CWT (+\$0.02), Class III \$15.55 (+\$0.09), and Class IV \$15.06 (+\$0.25). The product price averages used in computing the class prices were butter \$1.9990, nonfat dry milk \$0.9473, cheese \$1.6693, and dry whey \$0.2886.

Average Farm Feed Costs for Handy Reference

To help farmers across the state to have handy reference of commodity input costs in their feeding operations for DHIA record sheets or to develop livestock feed cost data, here's last week's average costs of various ingredients as compiled from regional reports across the state of Pennsylvania.

Remember, these are averages, so you will need to adjust your figures up or down according to your location and the quality of your crop.

- Corn, No.2y — 2.28 bu., 4.08 cwt.
- Wheat, No.2 — 2.45 bu., 4.09 cwt.
- Barley, No.3 — 1.37 bu., 2.94 cwt.
- Oats, No.2 — 1.40 bu., 4.36 cwt.
- Soybeans, No.1 — 4.40 bu., 7.34 cwt.
- Ear Corn — 61.87 ton, 3.09 cwt.
- Alfalfa Hay — 112.50 ton, 5.63 cwt.
- Mixed Hay — 108.75 ton, 5.44 cwt.
- Timothy Hay — 117.50 ton, 5.88 cwt.
