SEWAGE TREATMENT SYSTEM FOR SALE

Unused FAST (Fixed Activated Sludge Treatment) System Biologically oxidizes organic matter to produce a clear odorless effluent which is then disinfected by an ultraviolet sterilizer. This system was originally designed to be used onboard ships but is also usable on land. It is sized for approximately 125 people or 7000 gallons per day. The effluent could be directed toward a stream, or used for watering. Here is how it works.

Arrangement: This system includes two pumps, a Roots blower, UV Sterilizer, diverter valve, three float switches, control panel and remote alarm panel. All equipment except the remote alarm panel is assembled on the unit.

The unit is divided internally into two tanks, a media tank and a wet well. The wet well is a retention tank, sized for adequate disinfection time during peak flow periods. Biological treatment takes place in the media tank. The media is assembled into blocks using corrugated sheets of PVC, which provide flow channels and a large surface area for microbial growth.

Operation: Raw sewage enters the media tank through the influent trap at one end of the unit displacing an equal amount of clear water into the wet well.

The wet well is discharged by one of the duplex discharge pumps. Each is rated for 100% duty, ergo one pump is selected as the "duty" pump and the other as "standby". If the duty pump malfunctions, the water level in the well reaches the "high level" float switch, automatically starting the standby, which will pump until the wet well level reaches the "pump off" float switch which turns the standby pump off.

One pump runs continuously, pumping water from the wet well through the UV sterilizer, the diverter valve and back to the wet well. Each time the water passes through the UV sterilizer, the germicidal ultraviolet radiation disinfects the water, and the water cools the UV lamps. The throttling valve regulates flow through the UV sterilizer.

The tank is approx 16' long x 8' wide x 9 ft high. Drawings and more detailed information is available. Although the system is unused and never run, bearings and seals in the motors may have to be replaced due to long storage. The original price was approx \$55,000.

Our price is \$18,000.
