NEW! Now Available!
 Accu-puls 12V milking systems without inverter, runs strictly off of your 12V diesel batteries. Results are usually better milkout, faster milking, better rest period on milkers, less sore teat ends, less mastitis, which all helps to lower your somatic cell counts and helps produce more and better quality milk.

We specialize in cleaning vacuum lines and servicing milker systems. It has been proven over and over you can't properly clean your line with water only. Armor digest will bring lots of dirt out even after being cleaned with water once every month. Also any galvanized lines cannot be cleaned properly, all vacuum lines should be 2" PVC for proper milking performance and lower somatic cell counts. Any milking system and pulsators should be cleaned and serviced once a year, twice a year is better yet. Farmers could prevent a lot of mastitis and produce more and better quality milk if this was done, prevention is cheap compared to a cure.
Call 717-529-1226 for more information
 P.S. Summertime is the best time to clean and service vacuum systems, we can do our best job and clean your line easier when your cows are out in the pasture.
