

Now, short forage won't leave you short on nutrition. Improve ration flexibility with Pennfield Feeds and Optigen® 1200.

This year's drought impacted both the quantity and quality of forage. Pennfield Feeds has the solution: Optigen® 1200 controlled release nitrogen. This unique ration formulation tool allows your Pennfield Dairy Consultant to increase the

nutrient density of your Pennfield dairy ration. The result is extra room in your cows' diet for additional nutrients to offset the challenges presented by "short" forages.

Contact your Pennfield Dairy Consultant today, and let us formulate the feeding program that meets your goals. Call 1-800-995-0333, or visit us at www.pennfield.com.
