T-wall Bunker Silo

**Slant-back J-style
Feed Bunker**

**High Capacity
H-style Feed Bunker**

Cattle "Waffle Slat"
8000 psi

**Keystone Knuckle
Beam System**

helps support pit wall
(NCRS approved)

**"The answer to
the most common
question is
'No, there is
no build-up.'"**

"In my previous barn, I scraped two times a day, and I was tired of it, not to mention the danger to the cows if a cable snapped. I thought I would not be able to justify the additional cost until my builder suggested a design change which brought the cost down relatively close to the original design.

The biggest benefit to me is the labor savings. Two people can handle all the chores for our herd. I save money not only on labor but also on repairs.

The cows' hooves are healthier, and they show heat better because they are not afraid of slipping. During the five years with slats, I have not lost a single heifer from slipping. The cows stay much cleaner, even with my misting system for cooling them. The water has a place to escape."

- Raymond Good
Good's Dairy Farm

"Our original plan was to install scrapers. But after 10 minutes in a slatted barn in Somerset County, we changed our minds. Some people stay away from slats because of the initial cost, but that extra cost is made up for in the first couple years.

The one thing I like the most about slats is that there is no expense. I don't have any scrapers or drive units to maintain. I don't have to run scrapers every day or haul manure like we did in our previous tie stall barn. The cows' foot health has been a lot better, and the cows stay much cleaner. Our milk production is up and the somatic cell count has gone down. I give at least some of the credit to the slats because with less moisture on the floor, there is less bacteria."

- David Wolfskill

**"We would use
slats again if
doing it all over!"**

Thank you and Congratulations to all Dairy farmers that have installed slatted floors.

Jobs Done and in Progress for 2002
