**Dismantle & Remove Pole Building w/Steel Siding**

Building Approx. 30,000 sq. ft.  
Dimensions: 95' x 200'  
35' x 90'  
With 13' Overhangs  
Located at Kutztown, PA area

**Contacts: Don Cooper, Bob Hess 610-269-4685**

**Everlast Roofing, Inc. Metal Roofing & Siding**

**The Ultimate G-100 Process "The Best"**

- 1 Valspar 10S Finish Coat
- 2 Epoxy Primer
- 3 Zinc Phosphate Pretreatment
- 4 G-100 Zinc Coating
- 5 Full Hard Steel (80 000 min yield)
- 6 Heat formed less paint cracks

**NOTE! It is more important what is under the paint than what you see on top!**

- 1 One of the best paints, superior acid rain, cracking resistance and color retention
- 2 Primer coat promotes outstanding top coat adhesion
- 3 Zinc phosphate pretreatment. This is a very important process - if your current supplier cannot supply you with this or does not know you should reconsider
- 4 G-100 Galvanized. Most metal roofing has approx. 40% less galvanized under the paint. G-100 is more galvanized than most unpainted panels
- 5 Full Hard. Anything less than full hard will bend easier, lower snow loads, etc.
- 6 Heat formed. Metal is painted before ribs are formed. Most paint cracks at bends, heat forming greatly reduces cracks. (check metal siding that is installed for 5-10 years)
- 7 Stronger design, superior strength, more metal per L.F.
- 8 Add Everything Together And Price Should Be \$53.37 Per Square \$1.69 Per L.F.

**OUR SPECIAL PRICE ONLY**  
**\$48.32 PER SQUARE**  
**\$1.53 PER LINEAL FT.**

**What's against soft paint?**

In metal roofing and siding some manufacturers use soft pliable paint to prevent cracks. The disadvantage with softer paint is that it scratches so easy Handling during erection, flying debris during storms, children playing against it, etc can easily scratch softer paint. Scratches on softer paints tend to rust prematurely Everlast heat forms to prevent this. Ask our competition if they heat form. It's important.
