## 4-H'ers Review Farm Safety At Annual Lebanon Event

ANDY ANDREWS  
Editor

LEBANON (Lebanon Co.) — 4-H Farm Safety members and leaders gathered here at the Lebanon Expo Center last week to learn about a lot of things.

One, tractors and all-terrain vehicles, or ATVs, can overturn easily on slopes or steeply graded hills.

Another, even horse and buggies have to have the safety orange triangular shield on the back, otherwise known as the slow-moving vehicle, or SMV emblem.

Mark Kennedy, Middletown, demonstrates proper lighting and SMV marking during the countywide farm safety night.

Josh Burkholder uses a model tractor to demonstrate a potentially fatal rollover accident.

Still another, if you don't have a lifeline attached to you and you're working in a grain bin, within 20 seconds you could get buried and soon suffocate.

Having the proper equipment, using it properly, and knowing common-sense safety procedures were the highlights of the annual Countywide Farm Safety Night last week at the Lebanon County Exposition Center.

Del Voight, extension agent, was the chair of the event. Funding for the program, which included a free fire extinguisher to every family, came from a Pennsylvania Department of Agriculture Farm Safety Grant, according to Voight.

The grant total, \$2,500, helped pay for powder, or ABC, Amerex fire extinguishers from Messick's.

Also, several 4-H members were given awards during a tractor certification course conducted the previous Saturday at the fairgrounds.

Pete Hanson, Palmyra, 4-H leader, noted that the certificate for driving a tractor is not a driver's license. To get the certificate, 4-H'ers also had to do a demonstration at the farm safety night.

Demonstrators included Mark Kennedy, Middletown, with proper lighting and SMV marking; Josh Burkholder, rollover demonstration with model tractor; Jared Balsbaugh and Brad Wenger, grain bin safety using a portable drill with a bit as an auger and a model bin setup; Tom Bomberger, proper hitching; Steven Martin, proper starting of tractor and the importance of staying away from bypass starting; and John Donmoyer, 3-point hitch hookups.

Steven Martin won a special recognition for scoring in the tractor-driving contest for his age division.

Derek Cibik and Samuel Thomas highlighted the importance of rollover protection systems, or ROPS. Ryan Weidman and Brandon Wenger demonstrated how to get a tractor out of the creek. Nathan Brandt provided an SMV sign demonstration. Brandt noted an SMV cannot be used for any other reason, must be displayed on any towed SMV tractor, and that farmers should replace the SMV sign if it is faded.

Brandt was awarded the tractor driving recognition from the previous Saturday's contest at the fairgrounds.

Hanson, who handed out the extinguishers, noted that the ABC-type extinguisher is good for any type of fire, including trash, wood, liquid fuels, or electrical. "For \$22 a piece, it's cheap insurance," he said.

The extinguishers have a one-use life, with a shelf life of about seven years, but can be recharged. He explained the 30 seconds of firefighting power they provide can be instrumental in saving thousands of dollars.

However, the dry powder can rekindle, so water needs to be applied. He suggested an investment in a refillable, pressurized water extinguisher as well.

"When using the extinguisher, pay attention," said Hanson. "Use your head."
