TK crawlers work where conventional tractors can't

Minimum slip
 Since tracks keep slippage to a minimum, they boost performance. The tractor is capable of pulling its own weight. As a result, it can pull and drive wider implements than a conventional rubber-tired tractor of the same horsepower. That increases efficiency and lowers operating costs.

A TK crawler turns tighter than conventional tractors, too. That's a big advantage in cramped quarters or when making headland turns. For extended road transportation, TK tracks can be fitted easily with clip-on steel pads or "street plates."
