Offal Composting Meeting

BLOOMSBURG (Columbia Co.) — Small-scale slaughtering operations and farmers interested in learning more about composting butchering waste will want to attend a meeting Tuesday, June 24, at Gensemer's Processing near Bloomsburg. The meeting will begin at 7 p.m.

Gensemer's Processing has been using composting as a means to reduce the amount of offal that needs to be sent for rendering. The composting process not only reduces the volume of waste but also creates a usable

Participants will meet at Gensemer's for discussion on composting and to view the compost system. Afterward, participants will go to the nearby office of Penn State Extension to view a video from Cornell University regarding composting of animal mortality and butchering waste.

To get to Gensemer's from I-80, take Exit 236 Bloomsburg/ Lightstreet. Follow Rt. 487 north for about a mile and turn right onto Ridge Road. Go about a quarter mile and Gensemer's Processing is on the right.

For more information on the meeting contact Dave Hartman, extension agent, at (570) 784-6660 or HYPERLINK "mailto:dwh2@psu.edu" dwh2@psu.edu.

Muck Crops Field Day June 16

CELERYVILLE, Ohio — This year's Muck Crops Field Day will be June 26 from 10 a.m. to noon at the Ohio Agricultural Research and Development Center's (OARDC) Muck Crops Branch in Celeryville.

The 15-acre Muck Crops Branch, two miles south of Willard on Rt. 103, lies in the heart of Ohio's salad vegetable industry. There, rich muck soil (with 20 times more organic matter than typical Ohio soil) yields excellent produce.

The free field day is an excellent opportunity for commercial vegetable farmers, crop advisers, home gardeners and other participants to get a taste of what Ohio State University researchers are doing to improve vegetable production in the area, said branch manager Rick Callendar.

Some of these efforts have to do with management practices, such as improving pesticide application technology for peppers and collards, studying plantingdate effects on red lettuce coloration, and determining the right spacing for optimum yield and quality of cilantro.

For more information, contact Rick Callendar at (419) 935-1201 callendar.l@osu.

Farm Pasture Walk June 19

KIRKWOOD (Lancaster Co.) On June 19, 10 a.m. - 1:30 p.m., there will be a pasture walk at the farm of Arden and Carolyn Landis, located at 667 Puseyville Rd, Kirkwood (two miles south of the Solanco Fairgrounds at the junction of Rt. 472 and Puseyville Road).

The Landis family manages a seasonal organic dairy with 90 cows on 120 acres. They have

been grazing for 10 years. New this year, they are using shades and have some Italian ryegrass test plots on the farm.

Everyone interested in learning more about grazing is invited. Please pack a lunch. The Landis family will provide drinks.

For more information, contact either the Lancaster County extension office at (717) 394-6851 or the Landis family at (717)

Well Drillers Pull Out Of Dairy Farm

EPHRATA (Lancaster Co.) — Drillers searching for a new municipal water source on the Paul B. Zimmerman dairy farm near Ephrata apparently haven't found as much water as they'd hoped for.

"It wasn't enough to warrant the cost of developing the well," said East Cocalico Water and Sewer Authority Chairman S. Eugene Heft. "The geologists call the shots," he added, but "it appears there will be no further development of that well."

Heft said the Zimmermans would be reimbursed for damage to their property.

The proposed well had sparked controversy since Februarv, when the township staked an alfalfa field on Zimmerman's 80-acre farm along the Cocalico Creek. The field was one of three test drilling sites identified by Lancaster-based Enviroscan Inc.

Zimmerman, fearing that a new well would ruin the dairy he operates with his son, Paul Jr., hired a Harrisburg attorney to fight the project.

Friends and neighbors joined in the outcry.

The township was hesitant to seize the land by eminent domain but argued that it needs to boost water capacity to meet future needs and ensure dependable supplies for current residents.

Zimmerman later decided not to seek an injunction to stop the testing just off Garden Spot Road. "We left them come in," he said.

Drillers arrived May 27 and left June 4, according to Zimmerman. He said testing revealed a groundwater flow of 12 gallons per minute, much less than the 100-gallon range preferred for municipal use.

Heft said the flow was somewhat greater, but not enough to justify the expense of continuing. Depending on treatment for nitrates and water softening, he noted, it costs \$300,000 to \$400,000 to develop a municipal

Dry holes are not unusual, according to Heft.

"We found more water in the other two wells," he noted. The township is waiting for a laboratory to test the quality of the water before pursuing landowner negotiations.

"This has been the most controversial issue we've had," he said of the Zimmerman well, but it seems to have worked out for both parties.

"Maybe it was meant to be." From a June 8 Lancaster Sunday News report.

Pennsylvania: 9,300 **Dairy Families Strong**

HARRISBURG (Dauphin Co.) — Proclaiming June as Dairy Month in the commonwealth, Gov. Ed Rendell early this month encouraged Pennsylvanians to celebrate agriculture and the dairy industry.

"Pennsylvania is proud of its dairy industry and the important contribution it makes to our economy and the welfare of our citizens," Rendell said. "We salute dairy farmers and their families for the strength and vitality they bring to rural communities throughout the commonwealth."

Agriculture Secretary Dennis Wolff added, "Today's dairy farmers must juggle many challenges in order to succeed in farming and make it a profitable business. The lines between farming, the environment, technology, and science have grown increasingly blurred in recent years, and farmers must understand all of these things in order succeed at their trade.

"As a dairy farmer, I understand the challenges facing the industry, and I am happy to say that Pennsylvania's dairy farmers are meeting these challenges with success. Our state's dairy farmers stand at the forefront of the dairy industry and of agriculture," Wolff said.

More than 9,300 families operate dairy farms in the commonwealth. These families are stewards of 599.000 cows and oversee the production of 10.8 billion pounds of milk annually - approximately 6.6 percent of the nation's milk supply.

A leading agricultural enterprise, the dairy industry generates nearly \$1.79 billion in revenues for the state economy. Pennsylvania continues to lead the country in dairy products, ranking fourth nationally in milk, butter, and ice cream and sixth in cheese production. According to the USDA, each person consumes an average of 29.8 pounds of cheese, 23.2 gallons of milk, and 32 quarts of ice cream a year in the U.S.

Rich in calcium, potassium, and nine essential nutrients, dairy products help to better manage your weight and reduce the risk of high blood pressure, osteoporosis, and certain cancers. Nutritionists recommend eating three nutrient-rich dairy foods per day as part of a healthy diet. As part of the "3-a-Day" allowance, the Pennsylvania Department of Agriculture encourages Pennsylvanians to enjoy our state beverage milk — and other dairy choices such as cheese, yogurt, and ice cream.

For more information on Pennsylvania's dairy industry, please contact the Pennsylvania Department of Agriculture at (717) 783-8462.

High Pressure Produce Sprayers Trailer or 3 Pt. Hitch Models

Zimmerman's manufactures several different model sprayers designed for produce spraying. They are built for the small farmer that cannot justify a large expensive sprayer. Trailer models are available with a 200 or 300 gallon tank and 3pt hitch models with a 110, 150, 200 or 300 gallon tank. The 25' single sided boom has 7' plus clearance and requires a minimal amount of drive rows because of the wide span. It also has a hydraulic cylinder that allows the operator to level the boom from the tractor seat. A Hypro high pressure diaphragm provides up to 290 p.s.i. and non-drip nozzle bodies keep chemical loss minimal. Stop or call Zimmerman's today to see how we can help you with your spraying needs and improve your profit margin.

Paul B. Zimmerman Inc. • 50 Woodcorner Rd. • Lititz, PA 17543 • (717) 738-7350

HEAVY DUTY HOOF TRIMMING TABLES

Endorsed by the International Hoof Trimming School of Wisconsin

- 12-year building experience in the tables design
- 2"x2" tube frame chute
- chute measures 75"x28"x75" high
- 4" casters for cradle fold-
- 2 10-inch lift belts
- 3500 lb. axle with or
- two hydraulic cylinders for extra stability
- tool box for D.C. pump and battery protection
- manure grate to keep work area clean
- fold away side gate
- removable head board
- 45 min video from International Hoof Trimming School of Canada

FOUR MODELS TO CHOOSE 1. PORTABLE 2. STATIONARY 3. 3-POINT HITCH 4. SKID STEER MOUNT
