### Almanac

For the week ending Wednesday, Jun. 11

**Temperature**  
Low ..... 54  
Normal low for week ahead ..... 60

**Precipitation**  
Month to date ..... 3.24"  
Year to date ..... 18.78"  
Normal year to date ..... 18.57"

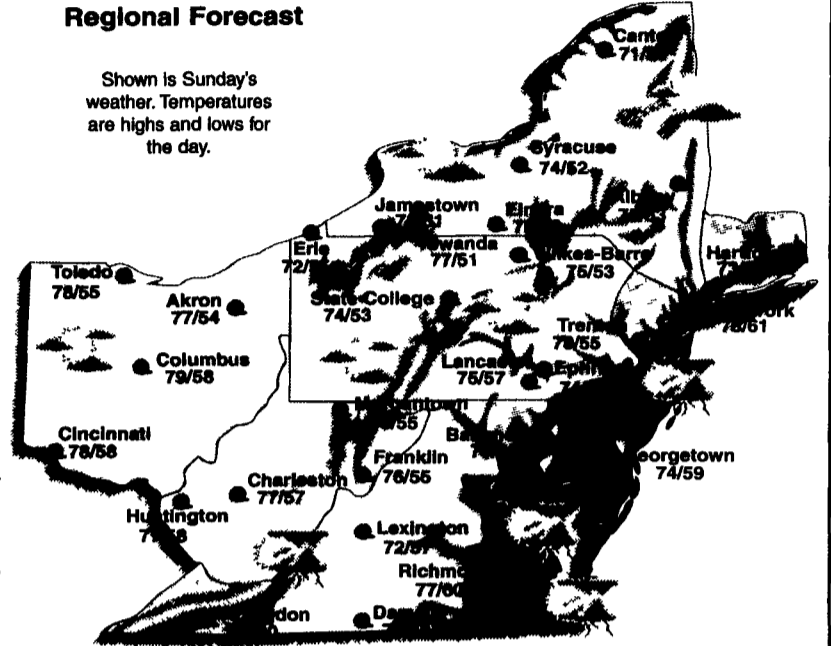

**Growing Degree Days**  
Season to date ..... 486

### Farming Forecast

The region will start to dry out early this week as high pressure slowly presses southward. As the high moves offshore later this week, a return southerly flow may bring back more showers. Sunday will feature 5-8 hours of sunshine. Average relative humidity will be near 90 percent in the morning and 40-50 percent in the afternoon. There can be a shower.

### Regional Forecast

Shown is Sunday's weather. Temperatures are highs and lows for the day.

*Dande says...* **Worried about too many acres of late planted corn??**

# Century & Summer King BMR

**First Cut Ready in About 40 Days!**

### SORGUM SUDAN HYBRIDS

**Century BMR**  
- Locally proven hybrid  
- 80-85 days to boot

**Summer King BMR**  
- New lower cost product  
- 60-65 days to boot

**Brown Mid Rib (BMR) Sorghum Sudangrass** may be the summer crop for you! The weather has challenged dairy farmers this year, and made high quality forage supplies very tight. No one knows what summer will bring. Will we have enough heat units to finish a corn crop? Do you have enough forage on hand to wait for a corn crop? Sorghum sudans require heat as well, but cost much less to grow. The energy levels in BMR are similar to corn silage with approximately twice the protein when harvested at 30-36 inches.

### Management Tips:

- Apply 75 units of Nitrogen at planting.
- Plant at 35-60 lbs per acre.
- Seed depth approximately 1"
- For Super Feed Quality:**  
Harvest for balage at 30"  
For silage at 36"  
For grazing at 18"
- Apply 50 units of Nitrogen after first cutting, or after second grazing.
- Approx. 30 days between cuts.

Helping the family farm prosper by specializing in high quality forages and grazing since 1993.
