AGRICULTURAL.

EFFECT OF HEAT ON HOGS -Hogs generally gain very little during the summer on account of the neglect on the part of their owners to provide for their comfort. In some cases their skin cracks open by the iufluence of the direct rays of the sun, and sores are formed which are intested by insects. The large amount of fat contained in the body of the hog renders it impatient of heat, and means should be provided for rendering the animal as cool as possible. The pastures in which hogs are kept should be well supplied with water, not only for drinking but for cooling purposes. If there are no natural streams or ponds, there should be pools made in which they can wallow when they desire. They should have plenty of grass and other green food, as well as sour milk and slops. Corn and other heating articles of food should be fed sparingly. Cooling shade is essential to the comfort and well being of nogs during the hot days of summer. Farmers who have the advantage of groves and forests located on the banks of streams and rivers, or on the shores of lakes, generally have little trouble with hogs during the summer. The ground protected by the trees and bushes remains cool and moist even when that exposed to the rays of the sun is parched and hot. The streams and ponds afford water for drinking and bathing. The hog is a cleanly animal when it is allowed a fair chance. If a hog pasture contains no natural shade and water, they should be provided. Water can be conducted through pipes from springs and wells at a small expense, and made to supply poels and watering troughs. Shade can be afforded by planting trees or erecting sheds covered by straw or running

GYPSUM AND HOW TO APPLY IT. -- Gypsum sulphate of lime, is not strictly a fertil izer, yet it acts directly upon the plant and indirectly upon the soil as a fertilizer. When sown upon growing crops especially clover and the grasses, it attracts and gathers the ammonia of the atmosphere, and fixes it upon vegetation, deliquescing upon the leaves and spears, so that it is taken up into the circulation. This ammonia not only serves as one of the nutritive elements of crops, but is carried by the circulation down into the roots and acts as a fertilizer in after years. It does not benefit the crops upon all soils, for instance, it has not been found beneficial to crops in the tide water district of Virginia, as well as other localities. When clover, grasses and other crops, are two or three inches high, and the dews are heavy, sow the gypsum on the growing plant when heavily laden with dew before evaporation takes place in the morning. The plaster adheres to the green crops, forming a sort of mucilage, attracting the ammonia, and fixing it in the plants. One bushe', or less quantity will suffice for an acre, and do just as well as a large quantity Its influence is felt and seen, upon the crops in a few weeks after being sown. It is good for all garden vegetables and vines, and dusted upon them frequently, will drive tery in adults. away insects.

vines.

BRING HOME SOMETHING. - Nearly every farmer goes to the nearest village to trade,

DOMESTIC.

GREEN GOOSEBERRIES FOR TARTS. -- Hill very clean, dry, wide-necked bottles with gooseberries picked the same day, in dry weather, and just before they have attained their full size. Wrap a little hay round each bottle, and set them up to their necks in a boiler of cold water, which should be brought very gradually to a boil; a little hay must be put in the bottom of the boiler, and the bottles fixed firmly. Let the fruit simmer gently until it appears shrunken and perfectly scalded, then take out the bottles, and fill up as many as you can quite full with some of the cooked gooseberries-it is generally necessary to sacrifice one of the bottles in doing this, taking care not to break the fruit. Directly the bottles are full of gooseborries, pour boiling water into the bottles up to the brims, else they will mildew. Tie bladder over the tops immediately, and keep the bottles in a dry, cool place. When the gooseberries are used, pour off the greater part of the water, and add the same sugar as for fresh truit, of which they ought to have the same flavor and appearance. Prepared in this way, gooseberries are perfectly wholesome, and will keep until the fruit comes in again.

DRAWN WORK STITCHES. - These are for use on linen or crash. For towels, table covers, buffet scarfs and doylees they are most admirable. The pupil may begin with the old hemstitch, and as she progresses, add lace stitches herring-bone buttonhole, overcasting, chain stitch, darning the end of a piece of linen for about an little shaver!" inch in depth. Pass a thread through the middle of the strands that are left, crossing and catching them in bunches of two

or three. This can be used as the heading tor fringe around doylees. Catch and secure with your needle a few threads close to the body of the stuff at top and bottom of a drawn space. This leaves the effect of even rows of threads a little separated. Then use a chain stitch to draw these rows together in bunches of four in the center. The foregoing pattern may be elaborated by a thread introduced in a waving line over and under the bunches of threads. Repeat this waved line in returning, and where the lines cross in the center finish with small figures in lace stitches. An ingenious workman will make endless combinations and varieties for herself.

FOR THE SIGK. -Frequently we find sick people whose stomachs reject all kinds of nourishment, until conditions follow that are in many cases fatal. I have never known the simple saucer of parched corn pudding refused. The corn is roasted brown, precisely as we roast coffee, ground as fine as meal in a coffee-mill, and made either into mush, gruel, or thin cakes, baked lightly brown and given either warm or cold, clear, or whatever dressing the stomach will retain. Parched corn and meal boiled in milk, and fed frequently to children suffering from summer diarrho a. will almost always cure, as it will dysen-

WIT AND HUMOR.

BROWN : "Yes, Miss, I dew look prooty well, but I suffers horeful from rheumatic gout." Young lady: "Well, Brown, why don't you go to the dispensary down there and get something for it?" Brown: "Noa, noa, Msss, wife's a-takin' physic from theor, fur bronkiters, an' now an' then I takes a good long suck at it." Young lady: "Well, but it might be quite wrong in your case, Brown." Brown : "Well, you see, Miss, what I ses is this, what's sauce fur the goose is sauce fur the gander!"

A POETESS moans : "My heart lay on the threshing floor; I stifled every wail as blow on blow descended from one who held the flai!." It was enough to kill her ! But a woman who is so careless as to leave her heartlying on a barn floor until it is pounded into jelly with a flail doesn't deserve a particle of sympathy. The thresher perhaps didn't know it was "only a woman's heart." He may have mistaken it for a section of condemned bologna sausage, and we, therefore, ask for a suspension of public opinion in his behalf until his side of the story is printed.

PAPA was at his toilette, and his youngest daughter, aged six, who had found her way into his drassing room, was watching the progress of his shining razor with the keenest interest. Presently her elder sister came in search of her, urging, "You must come away, May, while papa is shaving." "I guess not," retorted the little and knot stitch. Draw the threads from wit, quickly, "I can stay, 'cause I'm his

> Young man, beware of stock and grain speculations! If you want an "option" that is safe, get the option to the hand of a good sensible girl of marriageable age, and put up a lot and a neat little cottage as a margin. It will be the grandest speculation you ever made, and will bring you big profits. You can stake your last dollar on that and be safe.

"WHY, I'm so glad you've come. Did you know that I've been worrying about you, John, all the evening ?" "That's just what I marrid you for. It is pleasant to think that there is some one home worrying about you." Somehow this view of the matter didn't exactly coincide with her ideas of marital amenities.

A LOVING bride: A young man has just been married. On the evening of the happy day he observes his bride carefully restoring her bouquet of orange blossoms within a globe of glass prepared for the purpose. Much surprised he inquires the reason. She, with a charming smile, replies: "But, my dear, 1 may be able to keep it for next time."

"MA," said a little girl, "I don't think Solomon was so rich as they say he was." "Why, my dear, what makes you think so?" "Because he slept with his fathers; and I think if he had been so very rich he would have had a bed of his own to sleep

"My dear Professor, I want to thank you for your lecture. You made it all so plain that I could understand every word." Professor - "I am truly glad you did un-

VEGETINE

Chills, Shakes, FEVER AND AGUE TARBORO, N. C., 1878;

DR. H. R. STEVENS DR. H. R. STEVENS: Dear Sir :- I feel very grateful for what your valuable medicine, Vegetine, has done in my family. I wish to express my thanks by inform-ing you of the wonderful cure of my son; also, to let you know that Vegetine is the best medi-cine I ever saw for CHLLS, SHAKES, FEVER and AGUE. My son was sick with measles in 1873, which left him with Hip-joint disease. My son suffered a great deat of wath all of the time: the suffered a great deal of pain all of the time; the pain was so great he d d nothing but cry. The loctors did not help him a particle, he could not alt his foot from the floor; he could not move without crutches. I read your advertiement in the "Louisville Courier Journal,' that Vege-Ine was a great Blood Purifler and Blood Food. I tried one bottle, which was a great benefit de kept on with the medicine, gr(dua) y ainthe kept of with the medicine, griduary) an-ing. He has taken eighteen bottles in all, and he is completely restored to health; wilks with-out crutches or cane. He is twenty years of age. I have a younger son, fitteen years of age, who is subject to CHILS. Whenever he feels ae coming on, he comes in, takes a dose of egetine, and that is the last of the Chill. Vegtine leaves no ball effect upon the system like most of the med cines recommended for Chi is. I cheerfully recommend Vegatine for such com-plaints. I think it is the greatest medicine ip he world.

Respectfully. MRS. J. W. LLOYD. VEGETINE.--When the blood becomes lifeless and stagnad, eith r from change of weather or of climate, want of exercise, irregular diet, or rom any other cause, the VEGETINE will renew the blood, carry of the putrid humors, cleanse the stomach regulate the bowels, and impart a tone of vigor to the whole body. Pharmacy," Spencer, Mass., reports : My customers speak very highly of the Great German Remedy, St. Jacob's Oil, it having always given excellent satisfaction. One of them, Mr. Henry Belcher, has been greatly benefited by its use in a case of

Druggists' Testimony.

MR H R STEVENS . MR. H. R. STEVENS: Dear Sir—We have been selling your remedy, the Vegetine, for about three years, and take pleasure in recommending it to our customers, and in no instance where a blood purifier would reach the case, has it ever failed to effect a cure, o our knowledge. It certainly is the *ne plus ultro* of renovators. Respectfully, E. M. SHEPHERD & CO., Druggists, Mt. Vernon, Illinois.

takes a load to market, but he rarely brings ble, haul a load of material that may be obtained for nothing, and which will be of great benefit to his land. Most village people make no use of the ashes produced in their stoves or the bones taken from the meat they consume. Scarcely any brewer has any use for the hops that have been hardly ever saves the clippings he takes from the feet of horses. All these materishavings cut from the hoofs of horses con decomposed in time, and crops of all kinds would derive benefit from them, They may be so treated that they would produce immediate results. By covering them with fresh horse manure they will decompose of milk, one teaspoonful of soda, two of very rapidly. They may also be leached cream tartar and a pinch of salt. Make the in a barrel and the water that covered them cake, put in the pan, cut the citron thin drawn off and applied to plants. Water and put in the cake endways; push down in which pieces of horns and hoofs have been soaked is an excellent manure for will prevent the citron from falling to the plants that require forcing. It stimulates the growth of tomatoes, rose bushes and house plants very rapidly, and emits no offensive odors. A vast amount of fertilizing material is wasted in towns that farmers could obtain the benefit of with very little trouble.

GREASE is fatal to all insect lite. Insects breathe by means of small pores on their sides. Grease or oil that comes in contact with the insects closes the pores and stops the breathing. Mercurial ountment kills as much by the lard in it as by the mercurythat is, so far as the vermin are concerned, but not as to the animals that lick it off from their bodies, so that almost any oily or greasy application will be destructive to insect vermin that infest animals, if it is applied where it will do the most good.

THE wood of drinking-water tanks may be preserved by coating it with genuine asphaltum, purified by melting it over a fire and stirring it occasionally for six hours. Apply to the dry wood and let it stand several days before wetting.

The way Plate Glass is Made.

To cast, roll, polish and burnish plate glass requires machinery of peculiar construction, and a "plant" that is costly by reason of its complex nature, The pouring of liquid glass from the furnace upon the cast iron plates, and the subsequent rolling, are processes comparatively simple. Any housekeeper who has used a rolling-pin on a batch of pie-crust dough, performs an operation very similar to this stage of plate glass making. It is the succeeding process of grinding and polishing and final burnishing ments have been made in Paris, The rethat require time and costly mechanism. After leaving the rolls and bed plate glass is rippled and rough, and only fit for grat- ment, provided it is supplied with sufficient ings or sky-lights. Each plate must be good drinking water; that a horse can subtransferred to machines that resemble the sists for barely five days without water; tables of a railway.
