GREEN SWEETMEATS. - Take watermelon rinds and scald in alum-water four hours: cover closely with grape or cabbage leaves; should they be clear and tender then, take them out and throw into cold water; if not, let them boil longer; change this water morning and night until all taste of the alum is extracted; then make a thin syrup of two pounds of sugar to one of truit; boil it a little and pour it hot over the rinds. and let them stand three days; then boil the sweetmeats until they are transparent and the syrup is quite thick; in the meantime have some white ginger soaked until it is soft enough to be scraped and sliced thin; boil it first in cold water, then in the syrup, together with lemon peel and mace to your taste; tie the ginger in a muslin bag to prevent its coloring the syrup; it is well to put in the grape leaves in layers during the process of scalding, then a layer of rind; keep kettle closely covered; do not use the juice of the lemons.

To CLARIFY SUGAR, -Take the finest kind, break it into large lumps and put it into a preserving-pan. If for syrup, add a pint of cold water to each pound ; if for candying, a couple of wineglassfuls to the pound will be sufficient. Beat the white of an egg, add it to the water, mix it well, and pour it over the sugar; one egg is enough for twelve pounds of sugar, if it is fine, or two if it is coarse. When the sugar is nearly melted stir it well and put it over a gentle fire; do not stir it after the soum begins to rise; let it boil five minutes, then take it off the fire, let it stand a minute or two, then take the scum carefully off; put the pan again on the fire. and when the syrup begins to boil throw in a little cold water, which should be kept back for the purpose; boil till the scum rises, draw it off the fire, and skim it as before; repeat this till quite clear; it is then fit for use. It is by long boiling that the different degrees are acquired which the confectioner requires.

POTATOES SEVEN WAYS .- Sunday, peel, steam, mash, add milk, butter and salt, and then beat like cake batter, the longer the better, till they are nice and light; keep hot. The steaming and beating will be found a great improvement, Monday, baked potatoes in their jackets. Tuesday, peel and bake with roast beef. Wednesday, fried raw potatoes. Thursday, peel, steam and serve whole. Friday, "potatoes a la pancake," peel, cut in thin slices lengthwise, sprinkle with pepper and salt, and fry in butter, turning like griddle cakes. Saturday, potatoes boiled in their jackets. And so on through as many days more in as many different ways, ad libitum.

WORK-BASKETS can be ornamented in many pretty ways. Choose an openwork basket of some fanciful design; in the bottom paste with mucilage a lining of silk, or yelvet, or satin, on which is painted or embroidered a spray of flowers. Around the edge of this lining in the bottom of the basket put a row of plaited ribbon, and another at the top also. It is not necessary to line the These baskets make pretty gifts.

BLOTTERS that are useful and are suggestive of pleasant thoughts are made of pieces of blotting-paper, the width of a good-sized envelope and twice the length. Cut several of these say three or four-tie them together at one end with a bow of narrow ribbon; on the ture, If you cannot find one picture that is suitable for this on account of its length, put a dividing line of black through the centre of the cover, and put a small picture on each side of it.

An elegant screen is made by using an ebony frame which forms one square space. Fill this with dark olive satin; on this, in oil colors, outline a hill and a tree. Use as dark shades as you can, and make them effective; brighten with yellow light, using Naples yellow. A design for the suggested landscape can be found in some book of wood cuts. and with a little work can be made very brilliant. Squeeze the paint from the sorb the oil, and so prevent its spread-

CARROT SALAD. - Select very tender French carrots and cook them in fast boiling water till tender; cut into very thin slices, put them into a glass salad bowl and sprinkle with sifted loaf sugar; add the juice of a large, fresh lemon and a wineglassful of olive oil. By way of garnish, place round the margin of the dish an onion cut in exceedingly thin slices and small bunches of any fresh, green salad leaves.

WASHING WOOLEN SHAWLS, RUGS, ETC. -Put half an ox-gall into two gallors of water, warm but not hot; wash the shawl in it with soap and water. Have another tub ready with tepid water and the other half of the ox-gall; rinse the shawl in it well, shake it out, open it wide and let it hang to dry in a het 100m, but not in the sun. Carpet rugs washed thus look as fresh as new, scoured with a soft brush.

ELDERBERRY WINE, -Take four quarts of berries and boil ten minutes in three quarts of water; stir during the time; hen strain off the liquor and add four pounds of sugar, after which boil ten minutes. Place in a jar, and when sufficiently cool place two slices of toasted bread spread with yeast on the liquor. This should be left standing in a warm place until it is done fermenting, after which bottle it, and it is fit for use,

TOMATO SALAD. - Take the skin, juice and seeds from nice, fresh tomatoes, chop what remains with celery, and add a dressing made of two hard-boiled eggs. rubbed fine and smooth, one saltspoon of English mustard, the yolk of one raw egg beaten into the other. Add very best salad oil, poured in by very small quantities, and beaten as long as the mixture continues to thicken, then add vinegar till as thin as desired. If not hot enough with mustard, add a little cayenne pepper.

Succotash.—Take a pint of shelled Lima beans (green), wash, cover with hot water, let stand five minutes, pour off, place over fire in hot water, and boil fifteen minutes, have ready corn from six good-sixed ears, and add to beans; boil half an hour, add salt, pepper and two tablespoonfuls of butter. Be careful in cutting down corn not to cut too deep; better not cut deep enough and then scrape; after corn is added watch carefully to keep from scorching.

MEAT that has gathered moisture in the refrigerator should be dried in the oven before being sent to the table, even if it is to be eaten cold. Meat is often wasted just from a lack of this

If the water in which new turnips are boiled are well salted, and is changed twice or three times, the strong and disagreeable flavor noticed in them before frost comes will almost certainly be removed.

AGRICULTURE.

MANY farmers do a large amount of

cooking for themselves and their cattle, poultry, &c., in copper and brass kettles. Any of them when not used for a time are lined with verdigris, called in the books subacetate of copper, also oxide of copper, and it is soluble in water, and is a virulent poison. Brass kettles are made from copper and zinc. Any acid will always act upon metals. If you stew apples, cranberries, tomatoes, or any fruit or vegetable that is of an acid nature, the acid eats or corrodes the copper or zinc. No matter how small the quantity swallowed it is a foreign substance, as well as poisonous and produces indigestion. The acid of apples is called malic or sorbic acid, and if it comes in contact with copper, zinc, lead or tin, will produce malatate of copper, zine, lead and tin. The fermentation of apples, or cider made from apples, produces vinegar, which is dilute acetic acid, and it will also produce the same chemical changes if it has the opportunity, and the results will be acetate of copper, acetate of zinc, lead and tin. When the milk becomes sour it produces lactic acid, which will act in the same manner as the two acids. and form lactate of copper, lead zinc and tin, and all of these metals are poisonous, and every one injures the health of the individual who has eaten them in his or her food. Dyspepsia is some of its forms, paralysis, neuralgia, and affection of the organs of the body are the consequences. I would as soon have a copperhead snake in my house as a brass or copper utensil for cooking purposes. If they are scoured ever so clean, the acid will act upon them even more readily. It is a common occurrence when pickles become a little changed in the spring, to put pickles and vinegar in a copper or brass kettles and boil them for a time and they come out much improved in appearance and handsomely greened. This bright color is acetate of copper. Tin vessels also lose their lustre by long exposure, and form a poison called oxide of tin. Lead pipes have been used for many years to convey drinking water; if it stands for some time in the pipe the

A VALUABLE CROP FOR SHEEP .- In England rape is considered a most valuable crop for sheep-keep, yielding the earliest autumn teed. It is a crop especially adapted to fen and peaty soils full of vegetable mould. Well manured and cultivated on the flat, in rows fifteen inches or thereabouts apart, it yields in its leaf and succulent stem a large nutritive produce. Among English farmers, after the land has been manured and cultivated during the spring months, four or five pounds of seed are sown with some 300 or 400 pounds of superphosphate in June for the main crop, though any time after April (in England) it may be well to sow portions in order to have a succession of food available for sheep from August onward. The rows are heed out as turnips are, but with a narrower hoe and without any special attempt to single the plants. The intervals between the rows should be horse and hand hoed. It is ready for the stock in about three months after sowing. English farmers frequently manage to have an earsides, though this is a matter of choice. ly piece of rape to give sheep between grazing and the turnip feed. Rape is also said Brown at the club that evening. cultivated in Great Britain to some extent on rich alluvial soils for seed. Sown late, as in July or August, it is cultivated as when intended for sheep food, but thinned out more severely in hoeing. It blooms in early spring, and is ripe and ready to cut in July, when it is tied in sheaves to dry, and threshed on a sheet in the field, outside paint a pretty little outline pic- yielding thirty bushels and sometimes more of seed per acre.

oxide of lead is formed and any one

drinking it is poisoned.

examination by introducing a finger by the side of the mouth into the space between the nippers and the grinders, when he will move his tongue to get rid of the finger and show so much of the nippers or lower teeth as to enable you to ascertain his age. Sulky horses require to have their lips held apart, and vicious ones will strike out with a fore foot when their month is meddled with, wherefore care is sometimes required. A cow's mouth cannot be examined without first holding her uose, elevating her mouth, and drawing tubes on blotting-paper, which will ab- down her lower lip. Some cows, like some people, will not allow themselves to be taken by the nose, and it can only be done by stratagem. Some have a way of curling up their nostrils when held, so that their pressure against the holder's fingers renders them powerless, but a steady pinch of the thumb nail against the septum or partition of the nose will make any cow

> Most of our grapes are accidental seddings. Deliberate attempts to raise seedlings have not been encouraging. The late Dr. Miner had 1500 seedlings, and selected some of the best. The selections have good points, but this is about ail.

> In looking over the history of the sheep industry it will be found that the small flocks have succeeded much the best. This is in a great measure due to the fact that small flocks get the best attention, thrive better and are less liable to accident.

Prussia has seven agricultural colleges. fifteen agricultural schools, twenty-five farm echools, 253 country agricultural schools and about forty special schools for gardening, etc , making about 358 agricultural schools.

Unless land is very wet, Prof. F. Farsky finds that potassium salts exercise a very beneficial action, but they are best as manures when in combination with phosphoric or nitrogenous substances. Chloride of potassium turned out to be of greater advantage than a mixture of bran and

KEEP all stables, pens and sheds in perfect cleanliness. They should be well ventilated, and not too warm, which is unhealthful. Filth is too often a cause of disease. We seldom hear of trouble from sickness where the stock are well fed and have clean skins, pure air and dry beds,

Be careful about permitting cattle to drink from ditches or from pools in which they are accustemed to stand, or in which their droppings are deposited. Such impure water is not only liable to injure the health of the stock, but is also a ruitful cause of malarial and typhoid fever among those who use milk from cows thus watered.

Two or three old cattle will add onethird of a pound more per day to their weight upon prepared hay and roots than upon the same materials unprepared.

HEN manure carries less water than stable manure, but more nitrogen and organic matter. As to potash and phosphor- in one year fourteen thousand boxes of ic acid, there is a great similarity in the "Seller's Liver Pills." They cure malaconstituents of both materials.

Two small hogs, maturing early, are more profitable than one large one.

A good hog may be produced by crossing the Suffolk and Chester White.

HUMOROUS.

PATRIOTISM: Monselet and Jundt were of hated Teutons, who were served with a splendid mountain trout, while they merely got a stale pasty. The two Frenchmen gazed anxiously at the flish, while their vis-a-vis as gloatingly eyed the pasty. A happy idea suddenly flashed across Jundt. Cutting the pie in two he set to work upon his share and devoured it, uttering the while loud encomiums upon its composition, flavor, etc. Passing the second half to Monselet he said to the latter, sotto-voce, 'eat it." "But it is a month old," objected Monselet. "Never mind; don't you see the Prussians are dying for it. Est it-out of patriotism." Monselet no longer hesitated, and swallowed the

"My Back Aches So,

and I feel miserable" said a bard-working man. The dootor questioned him and found that he had been habitually costive for years, that now his kidneys were disordered and his whole system deranged. Kidney-Wort was recommended and faith fully taken and in a short time every trouble was removed. The cleansing and tonic power of this medicine on the bowels and kidneys is wonderful. - Congrega-

A PARTY of New York snobs passed through a few days ago on the Texas on a sort of a jaunt, you know. One snob in tight pants and with hair parted in the middle said to another snob in tight pants with his brains balanced similarly: "Aw-I see by the paper that the cane crop of aw Louisiana will be "Pshaw!" said the second snob: "I nevaw admiawed large can. s, they are so vulgaw. Small ones, the size of one's fingaw, aw the awsthetic," "Y-a-a-s," responded snob the first. "It is prawbably a mistake. These Sawthern papers aw so unreliawble.' And they called the porter to inquire if the sunflower and lily were ever found in these wild countries.

BATTLE CREEK, MICH., Jan. 31, 1879. GENTLEMEN. - Having been afflicted for a number of years with indigestion and general debility, by the advice of my doctor I used Hop Bitters, and must say they afforded me almost instant relief. I am glad to be able to testify in their be-THUS. G. KNUX.

Too literal: "I see," said Mrs, Brown, 'that in this boat race the Scudamores took water first. Poor fellows! How thirsty they must have been; but what do they put it in the paper for?" "It doesn't mean that," jerked out

Brown. "Doesn't mean that!" said Mrs. B.;

'then what does it mean?" "Why,"said Brown, "it means-why means that they were the first to take water, that's all. You women can never understand anything."

"The idea of letting women vote!"

In The Family.

CORNER WYOMING AND LUZERNE STREETS, PITTSTON, Pa, Sept. 9, 1881. H. H. WARNER & Co: Sirs-I have used your Safe Kidney and Liver Cure in my family with marked benefits and can highly recommend it. C. W. CARR.

Ar an Eastern revival meeting the minister in the course of his remarks in-A morse's mouth is easily opened for formed his hearers that he was the conductor of a salvation train; the accommodations were first-class; that there were no misplaced switches to fear, and that Peter was waiting to receive them at the depot at the other end of the line. Thereupon a tall, gaunt, keen visaged man in the outskirts of the croud, addressing the clergyman, said: "I'm a good deal consarned in what yeou have to say, stranger, and ef yeou kin git me a back seat on enny of them air keers for half price I'll buy a ticket."

unsavory food with every appearance of One of the most remarkable applications of photography is that by which it is now made to register, and in the most accurate manner, the mechanical motion of the heart. The device by which this result is attained is indeed a triumph of inventive skill. It consists of a thin India rubber bag, to which a short glass tube is attachea; sufficient mercury is poured into the apparatus to fill the bag and a portion of the tube, and the instrument is then placed over the heart of the person to be examined. Arranged in this manner, every pulsation of the heart is indicated by a corresponding movement of the mercury of the tube, and, by suitable photographic apparatus, provided with a moving sensitive alip of paper, a perfect registration of and Pacific overland train for California the extent and rate of the pulsation is obtained. The interesting fact is made known by this process that the fall of the pulse sometimes takes place in successive horizontal lines, the column reascending two or three times before falling altogether.

Vegetine!

SAFE AND SURE.

MR. H. R. STEVENS:
In 1872 your Vegetine was recommended to me, and, yielding to the persuasions of a friend, I consented to try it. At the time I was suffering from general debility and nervous prostration, superinduced by overwork and irregular habits. Its wonderful strengthening, and couralive properties derful strengthening and curative properties seemed to affect my debilitated system from the first dose; and under its persistent use I rapidly recovered, gaining more than usual health and good feeling. Since then I have not hesitated to give Vegetine my most unqualified indorsement, as being a safe, sure, and powerful agent in promoting health and restoring the wasted system to new life and energy. Vegetine is the only medi-cine I use; and as long as Llive I never expect to find a better. Yours truly, W. H. CLARK, 120 Monterey Street, Alleghany, Pa.

For Nervousness, Sleepless Nights. WASHINGTON, D. C., March 12, 1877.

Dear Sir—I do not believe in puffing, nor would I indorse a humbug, but I consider it no more than real justice to speak well of Vegetine, believing it to be an excellent medicine. I have used several bottles of it to my entire satisfaction and great relief from an inexplicable Nervousness, which had caused me great suffering and sleepless nights, have walked the floor and resorted to different methods for relief, to no purpose. I finally thought I would give Vegetine a trial, with little faith, I will admit; but to my surprise and great relief, a few do-es conv.nced me that I had got hold of the right thing for my difficulty. It sent out humor from my blood that, I have no doubt, was the cause of the misery I had endured, and I found relief as soon as a medicine could relieve a disease of that kind. When I began its use I seldom got a might's sleep, or half a one, and my appetite was poor and as a consequence. I was remained down of this kind: "Mothers should know that poor, and as a consequence, I was running down rapidly; but, after a few doses, I saw a radical change every way, and am thoroughly satisfied with Vegetine, and recommend it to any person suffering as I did. Respectfully, MRS. J. A. JOHNSON.

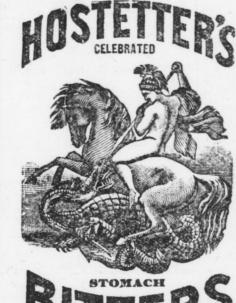

Dyspepsia, Nervousness and General Debility. CINCINNATI, O., April 9, 1877.

MR. H. R. STEVENS: Dear Sir-I have used several bottles of Vegetine for Dyspepsia, Nervousness and General Debility, and I can truly say I never had a remedy so sure in its effects; therefore I may recommend it to since.' Walnut Hills, 41 Court street.

Chapped hands, face, pimples and rough skin cured by using Juniper Soap, made by Caswell, Hazard & Co., New York.

Mr. Jablochkoff s electric candle, alhough very ingenious, must be still further improved before it can come into general use. Mr. Tehipaleff says that in order to give the best result, that kind of andle requires magnetic electric machines with a changeable current, and they are much more expensive than the machine with constant current. A candle 0.12 metre long will burn 30 minutes, giving a ight equal to 250 normal candles, and costs 50 centimes, so that a light of 1000 candles costs 4 francs an hour, besides the expense of working the machine. The cost of lighting the Palais d'Industrie in Paris by Jablochkoff's candles would be about 6 0,000 francs instead of 50,000, the cost of the ordinary regulator arrangement for the same purpose.

Those who use Carboline, as now improved and perfected, the great petroleum hair renewer, are always distinguished by the beautiful soft texture of the hair protive. It counteracts a tendency to premature decay, and sustains and comforts the aged and inall toilet preparations.

> Hair Hygrometer .- In a new hair hygrometer, by Dr. Koppe, of Zurich, the hair, protected by a sheet metal frame, is stretched by a small German silver spring, which can bear & grain. In adjustment, cloth covered frame, after being moistened with water, is pushed into the back wall of the apparatus. In less than a minute the pointer rises to 100; or it can be exactly brought to 100 by turning with a watch key the shaft to which the end of the hair is attached. If the moist frame be now withdrawn, the apparatus soon shows the moisture of the surrounding air.

C. G. Williston, who has had ample opportunity to investigate the subject says that the danger from rattlesnake bites has been largely overestimated.
