FOR SALE,

BY MATHEW CAREY, No. 118,

Market-Street,

## An Essay on Slavery,

Designed to exhibit in a new point of view its effects on morals, industry, and the peace of society. Some facts and calculations are offered to prove the labor of freemen to be much more productive than that of slaves; that countries are rich, powerful and happy, in proportion as the laboring people enjoy the fruits of their own labor; and hence the necessary conclusion, that slavery is impolitic as well as unjust.

PRICE 25 Cents.

## JUST PUBLISHED,

BY

**THOMAS DOBSON,**

Bookseller, at the Stone House in Second street,

Philadelphia,

VOLUME XI OF

## ENCYCLOPEDIA,

OR A

Dictionary of Arts, Sciences, and Miscellaneous Literature,

ON a plan entirely new; by which the different sciences and arts are digested into the form of distinct treatises or systems. This volume contains the articles, medals, medicine, metallurgy, metaphysics, methodists, Mexico, microscope, midwifery, and a great variety of biographical and miscellaneous articles, illustrated with nineteen copperplates. The tables of logarithms, &c. which were deficient in the tenth volume, are subjoined to this.

Eleven volumes of this work are now published, and the XIIth is in some forwardness. On the first of September, 1792, the price of this description was increased TEN dollars on all sets not taken before that time. The subscription is still open on these terms, and if any copies remain by the first of July next, the price will be raised TEN dollars more, on any copies which may be subscribed for after that period.

As many of the subscribers have taken only two, three or four, &c. volumes, they are earnestly requested to take up and pay for the remaining volumes, as it becomes difficult to complete the sets, and the publisher does not hold himself bound to make up any sets after the first day of July next.

From the Independent Chronicle.

## AGRICULTURE.

Messrs. Printers,

AS the Crows are frequently very troublesome, by eating the Indian Corn after it is planted, I wish you to publish the following very easy method to prevent it: Dissolve three quarters of a pound of Salt-Petre in water enough to cover half a bushel of seed corn; let it soak three or four days; stir it carefully once or twice each day, that all the corn may be impregnated with it, and the Crows will not visit the field more than once, and then will eat but very little of it. It is also of great service against the Grub-Worm, so troublesome in low ground.

And Messrs. Printers, let me also recommend planting Corn the beginning of May, and if by a late frost in the spring it is killed, do not replant it, as it will sprout again, and before the fall recover its full growth, and be as forward as if the frost had not touched it. Many are so fearful of a frost in the spring, as to make it so late before they plant, that the corn is often hurt by the frost in the fall, which it can never recover.

A FARMER.

From the General Advertiser.

## AN ACCOUNT

OF A

## NEW SPECIES OF WHEAT.

THE history of forward winter wheat, accidentally discovered in Virginia, is now more known. A Mr. Houl, in the county of Caroline, of that state, about seven years past, purchased of a merchant a quantity of mixed wheat, and having sown it, when his wheat was in flower, observed a single ear, almost ripe. Hence he conceived an idea, that it might be a different species. To determine this, he carefully preserved the wheat produced by this solitary ear, which has now multiplied to such a degree, as that several thousand bushels will be produced at the next harvest, it having been distributed into many hands.

But the character of this wheat deserves greater attention. And as in all probability, it has not yet entirely unfolded its qualities, it is much to be desired, that the best informed botanical knowledge, and the most accurate agricultural experiments, were united in its investigation.

The following observations, have, for their basis several trials upon different soils, made in the two last years; a term so short, that it would be dangerous to allow them an unscrupulous reliance.

This wheat ripens from 15 to 20 days earlier than any other; the straw is shorter by about one third, than that of any other kind, and the same proportion is maintained in the length of the ear. But the ear always possesses a full and permanent appearance. The straw is encumbered with very little fodder.

The circumstance of its ripening so early, produces the following important effects.

1st. It is never destroyed by the rust. An effect, towards which the nakedness and lowness of the straw, by allowing more freely the action of the sun and air, must considerably contribute. Upon this point, the experiments appeared to be conclusive.

The two last years were singularly unseasonable upon wheat in general, after it was in the ear, where the experiments were made, and most so upon this particular species. But this bid defiance to the pestilence, and weighed above sixty pounds to the bushel, whilst all others suffered a loss of about one third in quantity, and did not in weight exceed an average of fifty-five. The experiments were made in six different places. Upon new, old, stiff, light, poor and rich ground. And the different sorts of wheat were sown on the same day, immediately contiguous to each other, early and late.
