SEYMOUR's Patent Rollers.

THEIR superiority consists in being frees, emboles and boney-combed places, which are commonly found in rollers cast in sand, or clay moulds. These patent rollers are cast in iron moulds, previously heated, and will be found to be more dense, solid and durable than any rollers beretofore wied. Another important advantage they, have over others, is, that the necks require no turning, but are immediately sit for use, and from their accuracy, run with less frision, and require iess water to make them perform their work. They may be had by application to the Patentee in Plymouth, of Gen. Nathaniel Goodwin, or of Messes. Thateher and Hayward.
