THEIR superiority consists in being free from holes and honey-combed places, which are commonly found in rollers cast in sand, or clay moulds. These patent rollers are cast in iron moulds, previously beated, and will be found to be more dense, solid and durable than any rollers beretofore used. Another important advantage they have over others, is, that the necks regidne no turning, but are immedaitely fit for use, and from their accuracy, run with less friction, and require us water to make them perform their require left ecturacy, run sorth left friction, and require left water to make them perform their work.
