At the Federal Blast Furnace, In Carver—for Slitting, Plating, and Rolling MILLS.

SEYMOUR'S Patent Rollers. THEIR superiority consists in being free from holes and honey-combed places, which are commonly found in rollers cast in sand, or clay moulds. These patent rollers are cast in iron moulds, previously heated, and will be found to be more dense, solid and durable than any rollers heretofore used. Another important advantage they have over others, is, that the necks require no turning, but are immediately fit for use, and from their accuracy, run with less friction, and require less water to make them perform their work. They may be had by application to the Patentee in Plymouth, of Gen. Nathaniel Goodwin, or of Messrs. Thatcher and Hayward. Boston, Aug. 31. Sept. 19—\$6t.
