STRAUB'S PATENT FLAME ENCIRCLED OVEN

COOKING STOVE.

THIS Stove combines all that is valnable in existing Cooking Stoves with certain improvements peculiar to itself. It is constructed upon a new and entirely distinct principle truly philo sophical, so as to pass the flue entirely round the oven, thus making it enveloped or flame encircled. without impairing the necessary draught of the stove. This method of thus passing twice round, once over and once under the oven, is the secret of its great economy in the use of fuel, while the enlargement of the sir chamber affords increased space for the rarefaction of air and compensates for the usual disadvantages of a circular easier and better than any Stove yet offered to the public, with the advantage over most of them of saving one half the fuel. It is superior to the "Queen of the West," "Buck's Patent," "Eclipse" or "Hathaways Patent," for the following reasons: In these Stoves the upper side of the oven is dependant for heat and cas have from no other source than what radiates through the plate on which | Pa.," on the tip. the fire is made. If the ashes be lifted clean, too much heat will radiate and burn the bread on the upper side, if too much ashes be left, the bread will not bake on the upper side. Of this defect all good cooks complain. This Stove is entirely free of this objection, the oven always heating exactly alike top and bottom, and ends. Many buy the Premium or step stove and others of similar model. These Stoves consume much fuel, for first the fire chamber is too deep, the pots &c., are too high above the fire. Second when using th oven, all the heat which passes off under the oven being one half, never comes in contact with the boiling utensils, passesoff into the pipe and is lost. Also our Stove is so arranged with a bank or elevation FEAHE subscriber has just returned for the flame without suffcient concen- Picking's.) tration.
