FOREIGN SCIENCE.

ETHER VS. CHLOROFORM.

The use of chloroform as an aniesthetic was ately discussed in the Paris Academy of Science, n a paper by Dr. Petrequin, of Lyons. He favors the use of other, and shows that the former inconveniences attending its use have been obviated. Dr. Petrequin says:-

These inconveniences were removed by the etherizing bag, invented by a physician of Lyons, and also by the improved methods devised for obtaining ether perfectly pure. At present the operation of etherizing proceeds in a most satisfactory manner. The patient lies in a horizontal posture, with his head slightly raised in order to prevent his swallowing any other; about twenty-four grammes of other are raised in order to prevent his swallowing any ether; about twenty-four grammes of ether are poured at once on the sponges of the bag; the patient is directed to inhale copiously; the orifice of the bag is then closed, and the dose of ether doubled. The patient's eyes are carefully bandaged, and the profoundest silence is observed: in this way ansethesia is promptly obtained without agriation. It is easy to prevent accidents by closely observing the circulation and breathing. In general the pulse is first accelerated, then becomes regular again; were it to become concentrated, irregular, or low, the inhalations should be stopped, and air low, the inhalations should be stopped, and air administered. As to the breathing, it is at first subdued, but soon becomes complete. If it were to become difficult or interrupted, the apparatus should be removed and the ian used. In this way there has not been a single death at Lyons by etherization for the last fourteen years, while, according to Dr. Velpeau's own showing, the use of chloroform is never unaccompanied by danger.

To this paper Dr. Velpeau replied that there had indeed been a few deaths by chloroform, but it was not quite certain that there had been none by ether. At all events, he (Dr. Velpeau) had for the last fitteen years been administering chloroform to severil thousand patients, and had never seen any die from that cause. "THE TRIDESCOPE."

At the last sitting of the Academy of Sciences, at the Institute of France, Dr. Jules Cloquet presented a very interesting optical instrument, called a "Tridescope" by its inventor, M. R. Houdin, and by means of which the spectator may see deeply into the interior of his own eyes, and follow the movements which take place during the process of vision. This new discovery will be of great service to oculists by enabling them to study the different and numerous maladies which affect the interior of the eye and in-jure the sight. The Academy referred the in-strument and the paper which accompanied it to MM. Becquerel and Poucault for examina-UTILIZING MARSHES.

The Paris Acclimatization Society has pub-

The Parts Accommatization Society has published in its last builetin a report from Dr. Sace on the means of utilizing the marshes which still cover so large a portion of Central and Northern Europe, and produce scarcely anything but rushes and peat. According to the author of the notice, that end might be attained by sowing them with Canada rice and importing a certain number of beavers. Canada rice, which was brought into notice some ada rice, which was brought into notice some years ago, is known to botanists as zizania aquatica. It has the appearance and qualities

aquatica. It has the appearance and qualities of rye, and differs from that grain solely in preferring a marshy soil. While green, it makes excellent food for cattle, and when the corn is ripe, it supplies excellent straw. The grain itself may be eaten boiled like rice, or may be ground and made into bread.

As for the beaver, which would give good meat and admirable furs, it would remain most readily in those marshes. This animal, which lives on grass and the bark of trees, formerly existed it, all the European streams, but has long since been everywhere destroyed, except on a few points of the Rhine and the Vistula. The result of this war of extermination is that European furriers annually send large sums to European furriers annually send large sums to America to purchase beaver-skins which might be produced at home almost without cost, by keeping these animals in a haif-domesticated state in the marshes, after first planting the latter with willows, alders, beeches, poplars, and other soft-wooded trees, the bark of which is the beaver's favorite food. Like Canada rice, these valueble amphibious animals can arrive, these valuable amphibious animals can endure the most rigorous climate. The Berlin and Moscow Societies of Acclimatization have every interest in seconding this attempt, which, it successful, would give a considerable value to an immense extent of land at present producing next to nothing.

At a late meeting of the Paris Academy of Sciences, a paper was received from M. Seguin on aerial navigation, or rather aviation, as it is termed, because it is founded, not on the principle of a gas lighter than air, but on that of the wings of birds, whose bodies, though heavier than air, are easily conveyed through it. tion, therefore, depends on a more or less correct imitation of the mechanical conditions of

avial organism. ANIMAL PLECTRICITY.

The number of fish provided with an electrical apparatus is not great, being limited to eighteen species of the torpedo, or two of the Gymnotus, two of the Mormyrus, and one of the Malapterurus. M. Charles Robin announces, in a paper addressed to the Paris Academy, that the ray possesses a similar apparatus. Thus there are two kinds of seafish that are decidedly electrical, the torpedo and the ray.

M. Robin's experiments were not of easy exccution. The ray is usually caught at an hour's sailing at least from the coast, and it does not live more than twenty minutes out of its element. Owing to its size and shape, it is not easy to keep in a vessel with sea water; nor is it possi-ble to conduct delicate physiological and electrical experiments in a fishing boat; so that for a long time M. Robin's efforts were fruitless, Fortunately the experimental basins now built at Concarneau, under the superintendence of M. Coste, have removed these difficulties. The aquaria at that place are large basins in the sea water is constantly renewed by the tide. and in which fish may live and multiply under the most advantageous circumstances. Robin carried on his experiments with a galvanometer, and a sufficient number of electro-scopic frogs. Sometimes the ray, when out of the water, makes violent muscular efforts, and flaps its pectoral fins.

During these efforts an electric discharge is scarcely ever obtained, but after a few seconds' rest there comes a succession of small discharges. At other times the fish remains quiet for three or four minutes, and then begins before to make great exertions, during which the galvanometer and the frogs give no sign of electricity, and then comes a short period of rest, when a few discharges are obtained. In some instances, however, after three or four minutes of rest, the animal suddenly and voluntarily discharges electricity. Discharges may also be obtained by pricking, pinching, or other wise exciting the fish. But, under whatever cir-cumstances the phenomenon be produced, it is always accompanied by a slight motion of the ocular globes and a contraction of the bronchial cavity, as also by similar contractions of the caudal firs. It is well known that similar motions are observed in the torpedo at the moment of a discharge.

-Postmaster-General Dennison is having printed a postage stamp of the denomination of iffeen cents, which will soon be ready for Issue. A stamp of this price, it was found, was greatly needed for the payment of postage on quarter ounce letters for France. On the face of the stamp is a finely executed portrait of Abraham

-Campo Bello Island, an attack on which by the Fenians has been predicted by the sensa-tional papers of New York, is in the Bay of Fundy, at the entrance of Passamaquoddy Bay. breadth, and is a part of the territory of New Brunswick. St. John's, with its rich shipping and commodious barbor, is about forty miles distant from Campo Bello, and can be reached in a few hours by means of steam communica-tion. Directly opposite is the coast of Nova Scotis, thirty-six to forty miles distant, with good harbor for light vessels.

GOVERNMENT SALES.

SALBOF STEAM GRIST MILL

CAVALRY DRPOT, GIESBORO, D. C.
QUARTERMASTER-GENERAL'S OFFICE,
FIRST DIVISION,
WASHINGTON, D. C., April 17, 1866

PHILADELPHIA, September 9, 1818.
We have carefully tested the sample of CHE-NUT
GROVE WHISKY which you send us, and find that it
contains NONE OF THE POISONOUS SUBSTANCE known as
FUSIL OIL, which is the characteristic and injurious ingradient of the whiskies in senteral use. gredient of the whiskies in general use.

BOOTH, GABRETT & CAMAC.

New YORK, September 3, 1858.

I have analyzed a sample of CHESNUT GROVE V.HISKY received from Mr Charles Wharton, Jr., of Philadelphia: and having carefully tested it, I am pleased to state that it is entirely regef from Porsonous OR DELETERIOUS Substances. It is an unusually pure and fine-flavored quality of whisky.

JAMES E. CHILTON, M. D.,

Analytical Chemist.

Boston, March 7, 1859. I have made a chemical analysis of commercial samples of CHESNUT GROVE WHISKY, which proves to be free from the heavy Fusil Ohs, and perfectly pure and madulterated. The line flavor of this whisky is derived from the grain used in manufacturing it.

Respectfully. A. A. HAYES, M. D., State Assayer, No. 16 Boylston street.

EUREKA! THE INFALLIBLE HAIR RESTORATIVE.

THIS IS NO HAIR DYE. TFF IMMENSE SUCCESS with which this prepara

TFF IMMENSE SUCCESS with which this preparation has met during the short time it has been before the public, has induced the theusands and tens of thousands who have used and attested its virtues to pronounce it the ONLY and TRUE Hair Restorative. The Eureka has been introduced into all the principal cities both East and West, and having taitinfully performed all that is claimed for it, has super-seed all other Hair Proparations. The Fureka restores Grey Hair to its original color: prevents the hair from failing out, by causing a healthy condition of the scalp imparting to the hair a softness, and gloss, and y utiful appearance that no other Hair Preparation can produce. The Eureka is free from all impurities or poisonou drugs and can be use without sulting scalp or nands.
