SATURDAY AFTERNOON.

BY THE LATE N. P. WILLIS. I love to look on a scene like this,

Of wild and careless play, And persuade myself that I am not old, And my locks are not yet grey; For it stirs the blood of an old man's heart,

And makes his pulses fly, To catch the thrill of a happy voice. And the light of a pleased eye.

I have walked the world for fourscore years,

And they say that I am old-That my heart is ripe for the reaper Death, And my years are well-nigh told.

It is very true-it is very true-I am old, and "I blde my time;" But my heart will leap at a scene like this,

And I halt renew my prime.

Play on ! play on ! I am with you there,

In the midst of your merry ring: I can feel the thrill of the daring jump, And the rush of the breathless swing.

I hide with you in the fragrant hay,

And I whoop the smothered call, And my feet slip up on the seedy floor, And I care not for the fall.

I am willing to go when my time shall come, And I shall be glad to go-

For the world, at best, is a weary place, And my pulse is getting low:

But the grave is dark, and the heart will fail In treading its gloomy way: And its wiles my breast from its dreariness,

To see the young so gay.

A STRANGE CASE.

A Young Lady Living Without Food-Remarkable Features of the Case. To the Editor of the New York Times .-

Some publicity has recently been given to facts which, for several months past, have been familiar to many families in Brooklyn, respectmy the inexplicable peculiarities of Miss Mary ------, who has been afflicted, and is still suffer-ing from disease, and who presents a study not only for the medical faculty, but for students in mental science. About a year ago this young iady had the misfortune to be thrown from a borse, and received severe injuries in con-sequence, but so far recovered as to be able to walk and fide out for exer-cise. On one of the occasions when she was riding in a car, as she attempted to step in the street, her hoop-skirt caught, and she was thrown down and dragged some distance, receiving very severe injuries, which caused apprehensions that she would lose her life. She was taken to her mother's residence, where she has since remained, and where every possible tenderness and attention were lavished upon her; and though many physicians have seen her and several of her friends, yet the history of the case, which may be regarded as extremely important to science has been hitherto velled from the public-publicity being the last thing that the family, of which the young hady is a most estimable daughter, would desire. The very great importance of the case, notwithstanding its mar-veilous character, must be the excure for breaking silence upon the facts.

It appears that Miss Mary _____, after being taken home, was a sufferer from severe spasms, after which she reclined on her right side, with her right hand under the back of her right The left hand was at liberty, and one of the lower limbs was twisted around the other, the toes being somewhat near each other. In this condition the patient remained, her eye-lads and teeth being closed, so that the physi-cians were of the opinion that lockjaw had set in. The patient not only took no food and no drink, but she did not sleep. Her eyes were closed, but her mind was always awake. The variations from these conditions and posture were only during sousms, when the limbs were set at liberty for a moment, and then flew back to their wonted places.

While in the ordinary position and unaffected by spasms, the patient soon begins to display by splains, the powers, which will be compre-hended when they have been described. She wrote with her left hand to her friends, and never failed to write on the ruled blue lines of the paper with the same case as if she had the use of her eyes. Her letters to her friends and schoolmates are cheerful compositions, written in an elegant lialian back hand, although the use of the thumb of the left hand is denied to her. The pen has always been taken by the forefingers and firmly grasped, the little finger and the edge of the hand being parallel to the paper. These letters have been familiarly signed "Mollie," and breathe no complaint at paper. her sufferings. This young girl, however, not been deserted by nature altogether, and left to be pilted. She has been able to call up the deepest interest, because she seems to be gifted with clairvoyance to a remarkable degree. She crochets, and that, too, in colors. The materials are placed at the back of her head, when she uses the thumb and foreinger of her right hand and her left hand in producing very handsome results. She can crochet thus, at the back of her head, without making any mistake in the colors, as well as any young lady who has use of vision and her two hands. She can also cut beautifully in paper, and do embroidery work, and in this way she finds both employ-ment and amusement. Another faculty that she possesses is that of reading any book without ever opening it. k seems, however, that it must be near her, or that she must touch it. A published report says that she does not see in this way everything in the room. This is possible, and even probable; but it seems that she can see, without the use of her eyes, anything that is near her. Our well known in this cominformant, who is munity, avers that there is no doubt of her complete power of clairvoyance, although he has heretofore been satisfied that any case has been well authenticated, and h called the attention of Professor Agassiz to the subject, in the hope that some scientific report, beyond the question of a doubt, may be made upon the facts. The latest condition of the patient varies somewhat from that in which she has been for many months. About Christmas she fell into a trance that lasted twenty days, and since that time hopes have been entertained that some nourishment is given to her, but the physician in attendance states that so far as lood or drink are concerned, she cannot be said to have taken any for nine months. It will naturally be asked if she has not become emaciated from such fasting. This would be the usual inference, but in her case she presents a picture altogether the reverse, She has grown more bandsome and apparently more healthy during her disease. No signs of ill-health mark her chocks. As she reclines npon her right arm, when not engaged in her employment, she might be regarded as in a gentle sleep. She is not pleased with the visits of physicians, but she is gratified to have the presence of friends. The question of her recovery is doubtful, although the fact that she has seemed to obtain some very slight nourishment lately gives a She is attended by one of the most little hope, physicians of Brooklyn, who states eminent that while she is ill it is impossible to give any opinion as to the direct cause of this peculiar malady. It is certain that at one period, from the 19th of September until Christmas, she never ate, drank, or slept, and that during that time she worked at her employment and books as though possessing all her faculties. So wonderful a case as this, of course, is liable to be received as a report of imaginary facts, but the knowledge that the whole matter, for the sake of science, must soon be made public, is the only apology that is required for directing public attention to the case. The medical men of Brooklyn have been much interested in this interesting young patient, and are able to corroborate the statement made, but they have no opinion to offer, so far as can be learned, on the causes of the malady. It is thought by some that the spine has been injured, and that the clairvoyands is the result of some abnormal condition of the brain

CITY INTELLIGENCE. FOR ADDITIONAL LOCAL PTEMS SHE FIFTH PAGE.]

STRAN BOILERS AND LEGISLATION .-- In Selec Conncil chamber was last evening held a meeting of the Council Committee to prepare legislation for the prevention of bolier explosions. Mr. Robert M. Evans, of Common Council, presided. There were present some fifty persons, including the test practical machinists and manufacturing en-

incers of the city. Wm. Sellers and Mr. Blanchard, Examiner for the United States Patent-office, Dr. C. M. Cresson, Henry Rowson and Mr. Birkinbine were examined

at length. From J. E. Wootten, Engineer of Machinery of the Philadelphia and Reading road, was read a

the Philadelphia and Reading road, was read a communication. The act of May 7, 1864, authorizing the appoint-ment of an Inspector of Bollers is sufficient for the purpose desired, if the provisions of the third sec-tion were fully taken advantage of, by establishing proper regulations, and by setting forth explicitly rules for the government of the Inspector while examining. For whilst under the act equally competent engineers may differ after examining the same boilers, and whilst there may be cases in which no enseific rule can be given for action. which no specific rule can be given for action there will, in most instances, be a decided advan tage in establishing such general regulations as

That boilers or boiler flues of a certain dia meter and length shall have a given thickness of iron in and length shall have a given interness of that hat the sheets of which they are composed; that safety valves shall bear a certain proportionate relation in area and number to the boilers; that all gauge cocks, or other water gauges, shall be in a certain prescribed condition; that a prescribed test be made of steam pressure gauges; that when two of more bollers are connected in one gang, certain conditions shall be observed, tending toward the maintenance of a strict water level throughout the

The question of what shall constitute a safe hotler and its attendant fixtures to be referred to a committee appointed by the Frankfin Institute. The communication advocated inspection o

Other parts of city, boilers, 100 Total, boilers, 1115 Mr. H. B. Lyons recommended the appointment of a chief engineer and four assistants for the in-spection of boilers for the city; to keep a record of bollers in use, makers, use, age, power of pressure, average pressure, and other data; to make exami-nations semi-annually, testing the bollers by hydraulic pressure, and note at each examination the thickness of the iron and the corrosion by rust; to examine engineers and report their fitness, and make it criminal for a firm to employ an engineer Another recommendation was for the appoint-

ment of three inspectors by the Mayor. The tenure of office of the inspectors to be during good be-

havior, or for two years. havior, or for two years. From a number of engineers of the city was re-ceived a document expressing gratification that a system was about to be inaugurated by which competent engineers would be employed. The appointment of a board of examiners is urged, whose diploma shall be the prerequisite of em-ployers.

ployers. Mr. Sellers suggested that a Chief Inspector and two assistants extannee every boiler at least once a year, and test each by water pressure lifty per cent. above that usually applied, and that no boiler should be set for use without the inspection and permission of the examiners. In case a boiler is declared dangerous it should be criminal to con-tinue its use. Each boiler should be placed sepa-nated way ways a two rately, and provided with a safety valve, two gauges and float, and have a fixed water appa-ratus. When hollers are set over each other, the valves, pipe and all other apparatus should be ap-proved by the inspector. Mr. Evans said that from New York he had re-

Mr. Evans said that from New York he had re-ceived a statement of the operations under the New York law: In that city there have been-boilers examined, 4,207; defects corrected, 715; boil-ers tested hydrostatically, 3,086; boilers repaired 191; gauges repaired, 254; safety-valves repaired 195; boilers removed, 9. Mr. Evans submitted an ordinance, as a basis for the action of the committee providing that

for the action of the committee, providing that Councils shall organize a department for inspect-ing stationary steam engines and boilers. The head of the department to be a chief inspector of head of the department to be a charman inspection of steam engines and bollers, to be appointed by the Mayor; the Inspector having been employed in the building and management of steam engines for ten years. The Chief Inspector to appoint, with the Mayor's approval, four first and four second assistants, of seven and five years' experience res-The Chief Inspector to keep a record of each boiler and engine inspected, their location and use, and all particulars relating to them; to see that each engine and boiler is inspected at least once a year by a first assistant, the boilers being examined internally and externally, and subjected to a hy-drostatic pressure of at least twenty per cent. above the highest working pressure that the boiler will be allowed to use; to see that the boiler has at least a good and sufficient safety valve and three-inch gauge cocks, and that each boiler or pair of bollers shall have a good pressure gauge; to cause a written report of the inspected bollers to be de-livered to the owners. When repairs are needed, the first assistant to direct them. The owner of every steam boiler in the city, ex-cept fire engines, steamboat and railroad locomotive boilers, shall report its location to the Chief Inspector, and the boilers shall then be inspected. A certificate of the good condition of a boiler shall be issued by the Chief Inspector, stating the maximum pressure of steam it shall carry. No one shall be employed to take charge of an engine or boiler unless holding a certificate issued by the Chief Inspector. The salary of the Chief Inspec-tor to be \$3000; First Assistant \$1500; Second Assistant \$900. The Chief to report quarterly to the Mayor the number of boilers examined, and their condition. Penalties are provided for neglect of the ordinance. The committee held the ordinance under consideration Dr. Cresson submitted as the most frequent causes of explosion: Improper form of construc-tion and staying defective or thin materials; wear from use, including coating with scale, low water, hot fuel too near the shell, expulsion of water be-tween flues; galvanic wasts from the introduction of metals in the water; cleaning; use of corrosive materials to prevent the formation of scale; low water and injection of feed water upon highly heated plates; low water and sudden starting of engine; sudden removal of scale by starting engine and valve, presenting fresh hot service to the water: want of blowing out and the injection of fresh fred water. All these, the doctor thought, could be remedied by educated engineers. The committee at a late hour adjourned.

A LONG-LIVED INSTITUTION.—Last evening, at the Franklin Institute, was held the eighty-second anniversary of the Philadelphia Society for Alle-vinting the Mistries of the County Prison. J. J. Barciay, E.S., Dessided The County Prison. J. J. vinting the Miseries of the County Prison. J. J. Barciay, Ezg., presided. The Scoretary was Mr. John J. Lytie. He read the annual report, which recommended the system of punishment now used at the Eastern Penitentiary. Its great specially is solitary confinement. A house of correction was also warmly indored. There were no sta-tistics given in the report. The facts and figures will be reported to the Legislature. Addresses were delivered by Hon. William S. Petros, Rev. Dr. Beadle, Hon. James Pollock, and Dr. Joseph Parrish. The inster stated that the general proportion of the State population to prison ard asylum inmares was: Is one of the few domestic remedies which have come into general use and favor, without puffing. It is the product of a simple shrab, harmless in all cases, and, as a domestic remedy, unequalited. UURES:

TOROPOSALS FOR NEW JAIL .- DEPARTment of the Interior. WASHINGTON, January 24, 1867.

Trescores.—The Louvre Mneeum has just pur-chased six frescores by Luini from a palace at Milan. They are said to be important both from 1b ir size and artistic merit. In SPECTION OF FLOUR AND MEAL FOR the week ending February 7, 1867;—3471 barrels of superfine; 71 barrels of rye; 99 corn meal. Total, 3632 barrels.

A BOLD THIEF .- A bold robbery was perpetrated last evening, between the hours of 6 and 7 o'clock, at the store of Mr. John Miller, Eighth and Che-nut streets. A few minutes after Mr. Miller had temporarily left the store, a negro came in and handed a note to the young lady left in charge, worded as follows:---

"Send me what money you have in the drawer to change a twenty-dollar note for this young man. JOHN MILLER." oung man.

The young lady, not suspecting that anything was wrong, proceeded to the drawer, and taking ten dollars therefrom, held the same in one of her hands, while with the other she was searching for more. At this moment the fellow sudseized the notes, and, quick as a flash, ienty darted out of the door and escaped before the lisconcerted young lady could give any alarm. The daring robber had paid several visits to the store during the past two or three days, and last evening it was evident that he had been watchan opportunity to commit the robbery shortly after the proprietor had temporarily retired from the store.

SENATOR SWANN SERENADED .-- Governor Thomas Swann, of Maryland, lately elected United States Senator, and who has been sojourning in Philadelphia for two or three days past, was tendered the compliment of a serenade last night, at ten o'clock, at the dence of his brother, Dr. Swann, No. 1512 Walnut street. The serenade was under the anspices of the Keystone Club of Philadelphia. Governor Swann appeared at the window, after several airs had been performed, and in a brief manner tendered his thanks for the compliment paid him, and excused himself from making any extended remarks in consequence of the unpro-pitious state of the weather, and also from the fact that he was suffering from a slight indispo sition, caused by the heavy labors that had lately devolved on him.
