

THE CITY OF ROCHESTER.

The city of Rochester (N. Y.) is one of the most flourishing and attractive towns in the interior of the country. It is located on both sides of the Genesee river, but seven miles from its entrance into Lake Ontario. The Genesee river affords unlimited water power, full advantage of which has been taken by the inhabitants, especially in the department of flour manufacture, the flouring mills being perhaps the most extensive of their kind in the United States. The 22 mills which were in operation in 1860 had a capacity for producing over 7000 barrels a day. The town was settled in 1812, and was incorporated as a city in 1834. Its rapid progress in all the elements of prosperity is indicated by its great increase in population, which in 1860 amounted to 48,000, and in 1865 to about 60,000. The Water Works Company of the city, which keep even pace with the other institutions of the city, have thrown a limited amount of their first mortgage seven per cent. bonds upon the Philadelphia market. These reliable and profitable securities may be obtained of Glendon & Davis, the agents in this city, at No. 48 S. Third street, at the low rate of 87 1/2 per cent., with the accrued interest from the first of July last. The interest is payable semi-annually, in January and July, and altogether the bonds present one of the most desirable investments now obtainable. In this connection, the following correspondence is of interest:—

Mr. A. H. Nicolay wrote, July 28, 1868, to John Williams, Esq., President of the ROCHESTER WATER WORKS COMPANY, desiring to know the condition of the Water Works of that city, also to ascertain the time when the company contemplated introducing the water in the City of Rochester, to which he received the following reply, together with a long report of the Chief Engineer of the Company, under whose direction the works are being constructed, giving an explicit and interesting account in detail of the enterprise, and furnishing information worthy of perusal, a copy of which is herewith attached.

ROCHESTER, August 3, 1868. Mr. A. H. Nicolay—Sir:—Your asking information respecting the Rochester Water Works Company, was received a few days since. Having been confined to my house by sickness for the past two months, I could not answer you as fully as desired. I, therefore, requesting him to give me a full statement, which I send herewith, and have every reason to believe the report to be a correct statement of the work.

Yours respectfully, JOHN WILLIAMS, President Rochester Water Works Co. Chief Engineer's Report. ROCHESTER, N. Y., July 31, 1868. John Williams, Esq., President Rochester Water Works Company—Dear Sir:—In compliance with your request, and in accordance with the letter of Mr. Nicolay, of New York, which you have handed me, I beg to submit the following report on the present condition of the work:—

At the commencement of the undertaking, it was confidently believed that the works would be so far completed as to let on the water by the first or about the middle of the present month; but, notwithstanding it has been pushed forward with great energy and judicious management, many impediments have been met with, and causes herein explained have presented themselves, delaying the completion of the work. Legislation has been necessary in order to render the securities of the company unquestionably safe. The corporation has existed since 1852; the parties interested deemed it advisable to have every act (including the contract for building the work) legalized by the Legislature up to the present time. This has been done.

Considerable trouble has presented itself in procuring the rights of way, in consequence of the belief among the farmers, agitated by mill owners on the stream of supply, that the mills would be deprived of water. All this trouble has been obviated by the decision to go nine or ten miles nearer the Hemlock Lake, and by the location of the large reservoir near Richmond Mills, which comprises an area of fifty acres, and will hold when completed, and independent of the reservoir at East Henrietta (twenty acres in extent), an ample supply for the city of Rochester for the whole dry season. It is the intention to store water in these reservoirs when the water in the lake is abundant and the mills are not endangered by its swollen stream; for use in the dry season, when it would interfere with the working of the many mills on the line to take the supply from the lake.

Since this plan has been adopted, mill owners and farmers are giving every facility to the prosecution of the work. The great question to be settled was the right of mill owners, which has done more than anything else to retard the work in its early history, is entirely and satisfactorily adjusted; and by taking the water in all its purity from the great outlet of the Hemlock Lake, the only prejudice the citizens of Rochester have had to the water is most agreeably dispelled; and when it becomes generally known that the company will get the supply from the lake, the fact will operate most beneficially on the securities and public confidence in the character of the work.

The foregoing will fully explain the reason why the water is not to be introduced as soon as has been expected. As concerns the mechanical construction of the work, notwithstanding it was required to be completed in July, and every means which energy and money could command have been actively used, it has been impossible, in my opinion, to push the work to a more advanced state than it is at present in. Large quantities of materials have had to be procured; machinery for erecting pipe had to be erected, in order to make even a proper commencement; so that the undertaking, which laborers have been extremely scarce during the whole season, notwithstanding the contractor has procured men from New York and other places at different times, and is paying twenty-five cents per day higher wages than is paid on any other work; notwithstanding those difficulties, the constant importation of emigrants from Europe has kept up a very large force, and the work has progressed with great rapidity. After the completion of laying and harrowing, there will be great increase in the force employed upon the work, and the latter part of the work will be completed with despatch.

The work may be included in the following divisions, viz:—The distributing pipe in the city; the distributing reservoir near the city line, the Henrietta Reservoir, and a reservoir near the city; the storing reservoir near Richmond Mills; the supply main, seven and a half miles from the city to the Henrietta Reservoir; of sixteen miles from the Henrietta Reservoir to the storing reservoir, and one-half mile from the storing reservoir to the source. There are about six miles of cast-iron pipe laid in the streets of the city, and a considerable quantity of pipe now on hand, ready to be laid. The pipe laid includes all the most difficult part of the work; the sixteen inch cast-iron main under the bed of the Genesee River is laid in a trench blasted out of the solid rock, and re-filled, to preclude the possibility of damage to the pipe under any circumstances. Cast-iron pipe mains have been laid under the canals at all the necessary crossings.

Of the conduit pipe, from the city to the Henrietta Reservoir, between two and three miles are laid and covered up, and the trench has been excavated the whole distance, ready to receive the pipe which is now being supplied at the rate of four miles per month. The Henrietta Reservoir comprises twenty acres of land, on a clay and hard pan soil; the banks are of this material, ninety-five feet thick at the base, and twenty-two feet high, have stood the storms and weather of the fall, winter, and spring, without showing any damage whatever. This work was interrupted by early winter frosts or it would have been completed with the force then employed, in about two weeks.

completed with the force then employed, in about two weeks. Of the sixteen miles of conduit pipe to be laid south of the Henrietta Reservoir, and to connect with the storing reservoir at Richmond Mills, about four miles are laid and being covered up. A large force is now operating on the trenches, and a quantity of pipe is ready to be laid. This work was progressing before harvest time, at the rate of three miles per month.

Another pipe factory is being established at Richmond Mills, and when harvest is over and laborers plenty, extra force will be put at work on the different sections, so as to ensure a completion of the work at the earliest possible time. The large reservoir at Richmond Mills will be completed simultaneously with the other work. Considering the extensive preparations made, the facilities for prosecuting the work, the prospect of a large influx of laborers after harvest, and the quality of material provided, I have every reason to expect that the work will be ready for the introduction of water into the city during the early part of November.

This work, when completed, will be of a character unsurpassed by any water works in the country or elsewhere, with a population of 70,000, and fast increasing, on a limestone formation, and, consequently, has none but hard water. Many portions of the city are out of the reach of the river and canals, and which are entirely unprotected, so much so, that in many places insurance cannot be effected without difficulty. Along the line of the pipe the farmers through which have been almost without water for the last two summers, except what they have hauled from long distances in barrels, wells having been drilled. On the whole route of the supply pipe through the country, the inhabitants will generally become water drinkers.

These works will cost but little to operate than the water being supplied and distributed by gravitation, with an abundance beyond a question or contingency, of very excellent soft water (see analysis of waters in accompanying report), from a source one hundred and seventy feet above the distributing reservoir, which is one hundred feet above the city of Rochester. From a careful enumeration of the uses which will be made of this water in the city, and the villages and farms through which the pipes pass, it is estimated that the rental from these works will not be less than \$160,000 yearly. An accompanying is my report, made in 1860. Respectfully submitted, (Signed) DANIEL MARSH, Chief Engineer R. W. W.

CITY ITEMS. BARAGAN offered in Summer Clothing and in Summer Goods made to order, to close out stock. Assortment still good, but being rapidly closed out. All prices guaranteed lower than the lowest elsewhere, and full satisfaction guaranteed to every purchaser, or the sale cancelled and money refunded.

Half-way between Fifth and Sixth streets, BERNETT & CO., TOWER HALL, PHILADELPHIA, AND 600 BROADWAY, NEW YORK. CINCINNATI, Aug. 25, 1868.

MESSRS. S. M. PETTINGILL & CO., No. 37 Park row, New York, and No. 19 State street, Boston, are our agents for the East, and specially authorized to contract for advertising in "The Commercial" at our lowest cash rates.

The Chinese Government having (through the Hon. Anson Burlingame) conceded to this Company the privilege of connecting the great steamer of the Empire by submarine electric telegraph cable, we propose commencing operations to China, and laying down a line of 900 miles at once, between the following ports, viz:—

Table with 2 columns: Port Name and Population. Ports include Canton, Macao, Hong Kong, Swatow, Amoy, Foo-chow, Wau-uh, Ningpo, Hang-chee, and Shanghai.

Total Population: 5,910,000. These ports have a foreign commerce of \$900,000,000 and an enormous domestic trade, besides which we have the immense internal commerce of the Empire radiating from these points, through its canals and navigable rivers.

The cable being laid, this company propose erecting land lines, and establishing a speedy and trustworthy means of communication, which must command there, as everywhere else, the communications of the Government, of business, and of social life, especially in China. She has no postal system, and her only means now of communicating information is by courier on land, and by steamers on water.

The Western World knows that China is a very large country, in the main densely peopled; but few realize that she contains more than a third of the human race. The latest returns made to her central authorities for taxing purposes, by the local magistrates, make her population 240,000,000 and 400,000,000. This is more likely to be under than over the actual aggregate. Nearly all of these who are over ten years old not only can, but do read and write. Her civilization is peculiar, but her literature is as extensive as that of Europe. China is a land of teachers and traders; and the latter are exceedingly quick to avail themselves of every proffered facility for procuring early information.

It is thought that there transmit messages in English alone. To-day, great numbers of fleet steamers are owned by Chinese merchants, and used by them exclusively for the transmission of early intelligence, if the telegraph were open, connecting all their great seaports, we now in existence, it is believed that this business would pay its cost within the first two years of its successful operation, and would steadily increase thereafter.

No enterprise commends itself as in a greater degree remunerative to capitalists, and to our whole people. It is of vast national importance commercially, politically, and socially. Shares of this company to a limited number, may be obtained at \$50 each, \$10 payable down, \$10 on the 1st of November, and \$25 payable in monthly installments of \$20 each, commencing December 1, 1868 on application to
