## THE DAILY EVENING TELEGRAPH-PHILADELPHIA, MONDAY, NOVEMBER 15, 1869.

# Evening Telegraph

#### PUBLISHED EVERY AFTERNOON (SUNDAYS BROEFTED),

AT THE EVENING TELEGRAPH BUILDING, NO. 108 S. THIRD STREET,

### PHILADELPHIA.

The Price is three cents per copy (double sheet); or eighteen cents per week, payable to the carrier by whom served. The subscription price by mail is Nine Dollars per annum, or One Dollar and Fifty Cents for two months, invariably in advance for the time ordered.

#### MONDAY, NOVEMBER 15, 1869.

ET CHANGE IN CARRIERS,-Mr. John Hanhauser will hereafter serve our subscribers residing in the district bounded by the north side of Thompson street and Montgomery avenue, between the west side of Fifth street and the east side of Broad. Mr. J. W. Parks, the former carrier, is no longer in our employ, and subscribers will please give the pay for their papers to Mr. Hanhauser alone.

#### THE SUEZ CANAL.

The completion of the Suez Canal will apparently solve the problem which puzzled the European navigators for many centuries, and at last furnish the short passage to the Indies which Columbus strove in vain to discover. after one of the mightiest nations on the globe has been created in the New World which he found peopled by savages. It remains to be seen whether the enterprise will prove, in all respects, an industrial and financial success. Although this is highly probable, yet, in this practical age, men prefer to await tangible and fully-attested results before they render a final and comprehensive judgment on any novel project. It is difficult, if not impossible, to assign limits to the capabilities of modern engineers. Give "them men and money enough, and they can not only dig ship canals, but remove mountains and construct edifices far more gigantic and imposing than the famed Egyptian pyramids. The real question at issue is, whether the new ship canal will prove a paying investment, and whether its utility, as measured in dollars and cents, will afford a remunerative recompense for the labor and expenditure involved in its construction and repair. The boat canals, especially in northern latitudes. have been superseded by railroads to such an extent, that even the great Erie Canal of New York, although sustained by continued State appropriations, is barely able to compete, during the summer months, with the railway lines, and the ordinary canal stocks are among the poorest of modern investments. It is possible, however, that the success of the most gigantic artificial water communication ever constructed may react favorably upon some of the boat canals by suggesting methods for their improvement, and that the triumph of M. Lesseps, at Suez, may not only insure the construction of an interoceanic canal between the Atlantic and the Pacific, but give a new impetus to the various important internal canal projects now under consideration in the United States and fense, and, as is well known, oftentimes with other countries. terrible effect. These engines of destruction The commercial advantages of the Suez Canal, although very great, may be overestimated. It will shorten the length of voyages, and thus save the interest on cargoes, the wear and tear of ships, the cost of freight. and the wages and time of crews, but when these savings are added up, the sum total is, after all, not strikingly impressive in these times of huge financial aggregates, for the reason that when a sailing vessel is fairly started on what is at best a long and tedious voyage, no very great expenditure is involved in its prolongation for a few weeks or even a few months. There is, however, an ample margin for profit if the Suez Canal permanently realizes the expectations of its projectors, and ship owners can well afford to pay them a large percentage on the cost of their work, if they practically abrogate the tedious route around Cape Horn. The American merchants of the Atlantic coast will share the advantages of the new improvement with the Europeans. They, too, will find their shortest sea route to Calcutta and Canton by the Suez Canal until a similar work is completed on the Isthmus of But, meanwhile, California and Darien. Oregon will remain the most convenient avenues of communication between the eastern coast of Asia and a civilized and friendly people. No triumph of modern engineering can neutralize the great natural advantage connected with the western frontier of our ocean-bound republic, and every year of progress will add immensely to the utilization of this superiority. In spite of all that France or England can do, San Francisco can still trade more advantageously with China and Japan than Marseilles or Liverpool, and, in a national point of view, it matters but little in what section of our wide domain the immediate profits of Asiatic commerce are realized. The jealous hostility displayed by Great Britain to the early movements of M. Lesseps shows how much she dreads the proximity of another powerful rival in her gigantic schemes of Asiatic aggrandizement and aggression. The new canal will greatly diminish the former difficulties in the way of a prompt despatch of French fleets and French armies to the coast of Southern or Eastern Asia. Already the advancing lines of Russian absorption closely approach the English outposts, and the day may not be far distant when France, too, will seek to sway vast districts of territory and countless hordes of human beings on Asiatic soil. If Napsleon III, or his successors, choose to embark in such an undertaking, the aid furnished by M. Lesseps will prove invaluable. It will diminish the risk, dangers, and difficulties a hundred fold, and this single fact may work changes in the destiny of a large portion of mankind which will outweigh in importance the prospective commercial results of the new improvement.

alification and a second

IN TERING BURNER CHAR BOX STAND ADVID

THE REMOVAL OF THE NATIONAL | public debt is being paid off with unexpected CAPITAL. For a number of years past the probabilities of the ultimate removal of the national capital from Washington to some point more

desired purpose.

near the geographical centre of the continent have been discussed without any very serious thought being bestowed upon the subject. During the past summer, however, St. Louis and other presumably eligible localities, for want of something more important to agitate themselves over, have managed to get up an excitement in a small way by discussing the expediency and propriety of such a removal. As a matter of course, the people of the Mississippi Valley are all of one mind as to the propriety of locating the capital somewhere between the Alleghenies and the Rocky Mountains, the Lakes and the Gulf of Mexico. The only trouble is, that each city and town, every settlement of half-a-dozen shanties, and every tract of land upon which it is hoped that a city may sometime be built, considers that it is the one locality that combines all the essentials of a first-class position for the

This subject has excited but little or no interest east of the Allegheny Mountains, except in the city of Washington, which has been thrown into a sort of agony of fear at the very idea of withdrawing from it the public patronage by which it lives. The ineligibility of Washington, on many accounts, as a site for the national capital is generally admitted; and if a choice was to be made at this day, it is very certain that it would not be the spot selected. The citizens of Washington know this perfectly well, and hence their tribulation. To the majority of the nation, however, the objections urged against Washington are not of so much importance as to warrant the expense and trouble of a removal, and the probabilities are that the dome of the Capitol will overlook the broad Potomac for many generations to come.

To make assurance doubly sure, however, the right of Congress to order a removal of the seat of government is to be tested. It is argued that the Government having accepted the District of Columbia from the States of Maryland and Virginia, under a provision of the Constitution, it cannot cede it back again to them without an amendment of the Constitution. But Congress has already ceded back to Virginia that portion of the District south of the Potomac, and the right to do so has never yet been questioned. Those opposed, however, to the removal of the capital are going to bring this up as a test case by disputing the right of Mr. Mackenzie, the lately elected member of Congress from Alexandria, to sit as a Representative from Virginia. We have no doubt that the unconstitutionality of the retrocession of the southern section of the District of Colum bia will be proved if it is made a test que tion: and we are glad that it is likely to com up, as it will be an easy way of putting quietus on the agitation that is going o about removing the seat of government t St. Louis or some other place in the far Wes TORPEDOES FOR COAST DEFENSE DURING the Rebellion torpedoes were largely used by the Rebels for river and harbor de-

period is confidently predicted, the pecuniary necessities of the people must be remembered, and it is especially desirable that proper provision be made for the increased demand for a circulating medium which has arisen from the progress and prosperity of the South and West. This is important, not only to the districts referred to, but as a precautionary measure for the relief of the established financial centres. While the business of the country has increased immensely since the beginning of the war, and enhanced prices have added to the demand for large amounts of money for the management of industrial affairs, the circulating medium is scarcely a whit larger now than it was ten years ago. Then, in addition to hundreds of millions of gold and silver which passed freely from hand to hand, there was a large bank note circulation, which was increased, by State action, in every locality which required increased banking facilities. In the present condition of affairs the use of gold and silver as money has entirely ceased; and the immediate benefits of the national banking system are confined almost exclusively to the Eastern and Middle States, leaving the South West in an extremely destiand financial condition. The result tute is that their industrial operations are constantly impeded, and when their crops are to be moved, such an excessive drain is made upon Philadelphia, New York, and New England, that an unnatural and injurious dearth is produced in our own money markets. The national banking system has worked wonderfully well, but it cannot continue to supply all the wants of a progressive people unless arrangements are speedily made for a liberal extension of its benefits. There is no good cause for alarm in prospective resumption, and no reason to fear that the burden of the national debt will become unduly oppressive, but it is imperatively necessary that the increase of financial facilities should keep pace with the

and unexampled rapidity, and while the re-

sumption of specie payments at no distant

increase of the varied and wonderfully extensive business transactions of the Republic. If the Government attends properly to its duties connected with this subject, the people will not only keep it supplied with funds, but insure their own prosperity and ward off dangerous panies.

CONSUMPTION OF COTTON IN EUROPE.

A EUROPEAN statistician has recently compiled the following table illustrative of the consumption of cotton in Europe during the last ton years

L'eurs	Average	No. of bales	No. of bales
ending	No of the	from	from
Sept. 20.	pir bale.	America.	all sources,
1869		1,432,000	4,503,000
1868	. 364	1,735,000	4,604,000
1567	. 371	1.548,000	4.147,000
1866	. 365	1,247,000	3,935,000
1865	.not given.	236,000	3,055,000
1864	. do.	242,000	2,598,030
1863	. do,	133,000	2,146,000
1862		562,000	1,993,000
1861		3,443,000	4,388,000
1860	496	3,407,000	4,272,000
It will	be seen that	the diminu	

the American supply speedily caused a marked decline in European consumption, b extraordinary efforts to increase the av product of other cotton-growing region far successful that in 1869 the

dates ranging from 1720 to 1773. Most of the coin seems never to have been in circulation, as they have a bright, fresh, unworn appearance. The month of the jar was covered with a flat stone when found. Opinions, of course, vary as to the manner of the

OLOTHING.

WalthAll 111

How many folks 1 see

A riding in their carriages,

As snug as snug can be.

Who snugly sit inside,

O happy man upon the box!

So comfortably wrapped within

Where did you get it, coachman, say?

Of you I'm taking note,

Your splendid overcoat.

With ample fold of cape ;

Whene'er I take my rides abroad,

And snugger even than the folks

The Coachman alts upon the box,

And drives them on their ride.

Opinions, of course, vary as to the manner of the secreting of this treasure trove. Some suppose that this is a part of Captain Kyd's cash, which has been reported stowed away at so many different points along the Hudson, and for which so many unsuc-cessful searches have been made. Others think, and their theory is more reasonable, that the treasure was secreted by some soldier or officer of the Revo-lutionary army, which was encamped in the very neighborhood for the last year and a half of the war, in fast, the Continental army storehouses were lo-cated a few paces from where this pot of treasure has been found. In the immediate neighborhood also was the old Elfison House, used by General Washington as his headquarters alternistely with the Hastrouck Mansion, at Newourg, while the army lay encomped here.

were much denounced by those who took more of a humanitarian than a military view of their performances, but military and naval men were quick to see their importance for both offensive and defensive warfare, and before the close of the Rebellion they were introduced in our own operations, and their efficiency sufficiently demonstrated. The Rebel torpedoes were generally very crude affairs, although some of them displayed considerable ingenuity in the arrangements for exploding them, but owing to their imperfect construction and the want of skill in those operating them, it is probable that not one of five hundred ever produced any effect, and those that did explode often destroyed friend as well as enemy. In our service several ingenious machines were invented, and much attention was given by military and naval men to the consideration of this new element in warfare-for the torpedo w

practically be a new element, as it has new been used to any great extent before the B bellion, and it has never been brought such a state of perfection as to make it object for serious consideration either as offensive or defensive weapon.

In the navy a regular torpedo corps h been organized under the orders of the Or nance Bureau, and it has been placed und the command of Lieutenant-Command Mathews, an intelligent officer, who has h stowed much study upon the subject of co structing and operating torpedoes. The corps is now operating in Newport harbo and the Navy Department has taken measur to have all the officers of the navy duly structed in torpedo practice. This is an i portant move in the right direction, and the is very little doubt that a high degree of et ciency will be reached in a short time, so th the approaches to our harbors can be made nearly impassable by any hostile force, and that too at a comparatively small expense. The Secretary of War, it is reported, has

directed the organization of a similar corps in the army, so that both branches of the military service can co-operate. Terrible as are torpedoes, they are no more

cruel than other instruments of warfare, and they are just as legitimate for the purpose of crippling an enemy as any of the military engines now in use. If we must have war, we must have all the means we can command for carrying it on, only avoiding as far as possible unnecessary cruelty, and the use of torpedoes forms such an effectual means of defense that we are glad the navy and army have entered with spirit upon the task of bringing them up to the highest standard of efficiency.

THE NATIONAL BANKING SYSTEM. Among the measures which will probably engage the attention of Congress at the approaching session, those connected with the financial and monetary interests of the nation will attract the deepest interest. While the

used was a few hundred thousand bales than in 1860, notwithstanding a dim of two millions of bales in the contril of our plantations. Meanwhile, howey superiority of American soil for cott ture has been demonstrated in the m pressive manner, and the fact is now attested than ever before that those wh cessfully prosecute this important bra American industry will ensure munific wards for their labor.
