STORM SIGNALS.

The following memorandum has been prepared by the officers who are perfecting the system of storm signals authorized at the last session of Congress: Frequent Plans for Observation and Report of Storms by Telegraph and Signal for the Benefit of Commerce.

I. OBSERVATION AND REPORT OF ATMOSPHERIC PHENOMENA. A series of meteorological observations and reports will be made by trained observers under military control, and supplied with the most reliable instruments. All instruments will be adjusted to a standard at Washington.

The observers will be stationed at points throughout the United States, selected by competent authority as those from which reports of observations will be most useful in indicating the general condition of the atmosphere, or the approach and force of storms.

It has been in view to so locate these stations that, the existence of a storm at one or more of them being determined, information of the facts may be had by the regular reports communicated by telegraph in advance of its probable movement.

Synchronous observations will be taken and reports made from stations three or four times a day, one about 8 A. M., one about 9 P. M., and one at midnight. These observations and reports will be timed by Washington time. The office is in a measure led to this selection of hours by the press of business at other times upon the telegraphic lines. Other observations will be made for record.

II. TRANSMISSION OF REPORTS. The reports of observations are to be transmitted by telegraph under a special arrangement with the telegraph companies whose lines connect with the different points where stations will be established.

By a combination of telegraphic circuits, the reports will be rapidly transmitted to the different cities at which they are to be published. They will also be concentrated at Washington. The whole time required to transmit, collate, and deliver the reports, from the extreme points of observation, to the office of publication, will, it is hoped, not exceed one hour.

III. PUBLICATION OF REPORTS. It is intended to give the widest publicity to these reports, in order to make them useful to the greatest number. Copies of all reports will be furnished to the different papers for publication, and each report will be bulletined in the Board of Trade rooms, merchants' exchanges, or other conspicuous places, immediately upon its receipt.

As soon as the necessary arrangements can be had, a meteorological map, on which the changes can be noted as each report is received, will be displayed at the Board of Trade rooms, or other business centres in each city receiving reports. Similar maps will be furnished to the scientific establishments co-operating with the department.

The reports will be limited at the outset to the simple statement of meteorological facts existing at the stations of observation. These facts, together with such general laws as seem to have been determined by meteorological observations hitherto made and as may permit probable deductions to be made from the reports, will be published.

It is not deemed advisable to attempt at the outset, further than in this way, predictions which must often be erroneous. Whenever experience has certainly determined what may be regarded for any section of country as indications of approaching storms, signal-stations will be established as quickly as the necessary arrangements can be made, and signals will be displayed announcing the probable approach with other information which may be possible.

The observer, when one is stationed in any city, will be constantly on duty during business hours, and every facility will be given to obtain copies of the bulletins, or other full and latest information.
