

THE DEMOCRATIC WATCHMAN.

BELLEVILLE, JUNE 21, 1860.

LOCAL AND PERSONAL.

HAIL AND FLOOD AT ZION.—We are indebted to Mr. Wm. Garbrick, of the neighborhood of Zion, for the particulars of the recent rain and hail storm in that place. It seems that the rain, which commenced falling about two o'clock on Saturday, continued to fall in torrents about three or four hours. It fell so rapidly that the country was inundated to a very material extent.—The water accumulated in the neighborhood of Mr. Struble, and followed different ravines in the direction of Zion. One of the streams took a course by the way of Capt. Shaffer's residence and from thence through...

TO FARMERS AND HORSEMEN.—Doctor McCrum, the celebrated Veterinary Surgeon, will deliver three free lectures to the citizens of Howard and vicinity, commencing on Thursday, June 21st, and will continue the same on the following Friday and Saturday. He will also perform surgical operations on horses on the 25th inst. In his lectures, which are free, he gives the causes of all the different diseases, and also the treatment which diseased horses receive from the hands of men who attempt to treat them, without a proper knowledge of either the disease or the medicine which they apply.—Doctor McCrum can give a reference nearly two hundred persons in this county for whom he has prescribed treatment in diseased horses.

MISCHIEVOUS SNAKE STORY.—We are indebted to a correspondent at Church-hill, in Potter township, for the following snake story: It appears that not long since a man residing in the south-western part of that township declared that he had succeeded in killing a monster black snake, measuring eleven feet and four inches in length. The affair produced considerable sensation. The people of the neighborhood gathered in from various quarters, when to behold, the story had only been gotten up for mischievous purposes. The reptile was of ordinary size, on the discovery of which the excitement very naturally subsided.

IMPORTANT TO PROFANE SWEARERS.—It is not generally known that the Revised Penal Code, passed last winter, makes all persons who speak loosely or profanely of God, Christ, the Holy Spirit or the Bible, liable to an indictment for blasphemy, the penalty for which is a fine not exceeding one hundred dollars, or imprisonment not exceeding three months, or both, at the discretion of the Court. Persons in the habit of swearing had better be careful, as no officer who regards his oath of office can avoid returning to Court all persons who are guilty of the offence above specified.

COUNTY POSTMASTERS should bear in mind, for their advantage as well as that of the local press, that for every county paper delivered by them to subscribers, they are entitled to retain of the Post office funds ten and one half cents per year. It is for their interest, as well as that of the publisher, that the county papers be preferred, since there is no trouble of making collections or keeping accounts thereof, as on papers printed out of the county, the commission on which will not average more than from six to eight cents per year.

EARLY POTATOES.—We are informed that Mrs. Griffin, of Stormont, in this county, has her potatoes large enough for use on the 6th inst. Can any of our numerous gardeners beat this?

Further From Sicily. TUNIS, May 31. The following details of Garibaldi's attack on Palermo have been received from a reliable source. At 4 o'clock, on the morning of the 31st inst., Garibaldi attacked Palermo on the south side. A desperate combat ensued, which lasted six hours. The people made themselves masters of all parts of the town on the south of the Strada di Tollo. A terrible bombardment was opened by sea and land, notwithstanding which the people continued to fight. The troops retired within the Royal Palace, Custom House, and Casale. Hostilities were suspended from ten until twelve, when the struggle recommenced with greater desperation. The royal palace was taken by the people and in the evening was burnt down.

Other towns in Sicily had risen. The inhabitants everywhere were shouting, "Italy forever!" "Victor Emanuel forever!"

A telegram this morning from Naples confirms the news of the entrance of Garibaldi into Palermo. Garibaldi, at the head of the volunteers, penetrated, flag in hand, into the centre of the city during the bombardment, and established his headquarters there. Loss in killed and wounded very considerable.

The American citizens at Marsala had gone on board the frigate Trovati. The British Admiral Mundy, had offered the protection of English ships to all the Americans at Palermo. Growing Hostility of the Japanese Authorities Towards the Treaty of Powers. It can hardly be doubted, says the North China Herald, that most of the evils which subjects of the Treaty Powers are exposed to in China, are the result of the hostility of the Chinese towards the freedom of foreigners, while their revenue is high of half its worth as silk, tea, oil, and the necessities of life have, since the ratification of the treaties, doubled their value, and increased in proportion the expense of their large and slothful establishments. It is said that the Chinese are so jealous of the freedom of foreigners, that they are so afraid of their personal safety, that they would seem, too, that the report of one of the ministers having, during the heat of discussion, grasped the hilt of his sword and exclaimed, "let us risk ourselves of these treaties, or fight for freedom!" is not an idle story. Muskets and rifles are now equally as well made in Japan as in Europe, and the Danmoku ("nobles") retainers are daily taught their exercises and use.

Later from SICILY.

THE SCHOONER RED FOX, Capt. Oliphant, arrived at this port this morning, in the very quick time of five days from Tampa, which port she left on the 4th inst. She brings the important news of the total rout and dispersion of the great Constitutional army, so lately victorious near San Luis Potosi, under the command of Gen. Uruga and the probable loss of that officer. This important event took place at Guadalupe, and during an attack upon that city, which is said to have been at a moment in the possession of Uruga. But, just at the moment victory was declaring in his favor, a stray shot from the enemy's works fell into the midst of the General's staff and carried off one of the legs of the Commander-in-chief. In a moment all was alarm and confusion, seeing which, Gen. Will, who, at the head of some 1,000 men, still held his ground bravely, coolly watching his chance, charged with great fury upon the centre of the Constitutional troops, now crestfallen entering the city, threw it into a sad disorder, which was followed by the dispersion and flight of the whole army.

This news seems to us incomprehensible," says a Tampico letter, of the 4th, "but it comes to us from an authoritative source, and is reliable." It is added that the army of Uruga numbered 80,000 men, and that he, Gen. Will, then, nearly all the troops he has been collecting since his great victory near San Luis Potosi. It is also added that General Uruga succeeded in making good his escape, but that the loss of his leg will probably cost him his life.

No further particulars of this unfortunate affair have yet come to hand, and our correspondent, writing at the last moment, omits to give the dates. There would seem to be no doubt of the probability of the news.

William Walker and the Bay Islands. It is announced that the renowned filibuster and soldier of fortune, General Wm. Walker, has again quitted the shores of the United States for Central America. The little grey-eyed man of destiny is supposed to have gone to look after his interests in the Bay Islands—which interests are those of a speculator in other people's possessions.

A late number of the New Orleans Bulletin, in commenting upon the recent transfer of the Bay Islands from Great Britain to Honduras, makes the following remark: "Should there be war between the people of Honduras and those of the Bay Islands, the latter will have staunch allies in the much talked of K. G. C., a large force of which is now, we understand, on the island of Hoston."

So we see. The advance guard of his filibustering Expedition, Gen. William Walker, it seems, has set Excellency Tom George W. Beckley, K. G. C., a gaily gnomish memory. This is a highly becoming partnership, and justifies our ideas of the eternal fitness of things. The Bay Islands are a sweet little place, which may serve to soothe the little grey-eyed man of destiny, and to ready them for the American filibusters, until they find Mexico or Central America ready to drop like ripe cherries into their mouths.

These islands are called, by Spenser, in his work on Central America, the "Garden of the West Indies," and the "Key to Spanish America." They are six in number, and are possessed of a good soil, fine climate, and some excellent harbors. But, in the largest of the group is about thirty miles long by nine broad, and is well adapted to the culture of cotton, coffee, and other tropical products. Its position is very valuable in a commercial point of view, being the key to the Bay of Honduras, and the only place where goods can be taken on and off a steamer and dangerous canal. It may, it is made almost impregnable in a military point of view, and has even been styled "the New Gibraltar," being tenable, from its great natural advantages, with a very small force.

The following is a sample of the numerous letters constantly receiving for Hostetter's Stomach Bitters: CANANDAIGUA, July 15, 1859. Messrs. Hostetter & Smith, Pittsburgh, Pa.—Gentle.—As we are strangers, I here-with enclose you twenty eight dollars for four dozen Hostetter's Stomach Bitters, which please forward via Michigan Southern Railroad, Toledo, Ohio, and Clayton Station. I have purchased several dozen bottles at Toledo this Summer, but the sale is on the increase so much that I wish to open a direct trade with you. I was induced to try your Bitters by my physician, for the Liver Complaint, and received such material aid that I have recommended it to others, and have sold about two dozen per week for some time. I have all kinds of medicine in my store, but there is none that I can so cheerfully and truthfully recommend as your Bitters, for I know they have helped me beyond my expectation. PHILIP WILSON.

ATTEMPT TO POISON A FAMILY.—A heinous attempt was made some time since to poison an entire family in "New Washington, Co." A shoulder of meat, kept in the cellar, was rubbed with some virulent poison, and a mere accident prevented the family from partaking. Portions of meat given to a cat and dog caused almost instant death.

Obituary. DIED.—On the 16th inst., at the residence of Alfred Green, in Millsburg, ANNE MILES, aged about 70 years. On the 11th inst., in Snow Shoe, of Scarlet fever, FRANKLIN ARTHUR, only son of Anna Maria and Christian R. Graham, aged 1 year, 3 months and 3 days.

Candidates for Office.

Messrs. Editors.—Please announce the names of JON SCHMIDT, Sr., of Belleville, as a candidate for the office of Sheriff, subject to the decision of the Democratic County Convention. MARY D. MOURATS. Messrs. Editors.—Please announce the name of EDWARD J. BRAMMER, of Belleville, as a candidate for the office of Sheriff, subject to the decision of the Democratic County Convention. MARY D. MOURATS.

Messrs. Editors.—Please announce the name of J. H. M'CLURE, of Belleville, as a candidate for the office of Sheriff, subject to the decision of the Democratic County Convention. MARY D. MOURATS. Messrs. Editors.—Please announce the name of J. H. M'CLURE, of Belleville, as a candidate for the office of Sheriff, subject to the decision of the Democratic County Convention. MARY D. MOURATS.

Messrs. Editors.—Please announce the name of J. H. M'CLURE, of Belleville, as a candidate for the office of Sheriff, subject to the decision of the Democratic County Convention. MARY D. MOURATS. Messrs. Editors.—Please announce the name of J. H. M'CLURE, of Belleville, as a candidate for the office of Sheriff, subject to the decision of the Democratic County Convention. MARY D. MOURATS.

SADDLERY & HARNESS MANUFACTORY.

J. H. M'CLURE. Respectfully informs the citizens of Belleville and vicinity that he has removed to the building formerly occupied by T. F. Bostich as a Boot and Shoe Manufactory, on the corner of Main and Bishop streets, where he is prepared to receive to his old friends with a general assortment of the following articles: SADDLES, BRIDLES, HARNESS, TRUNKS, VALISES, COLLARS, WHIPS.

GROVER & BAKERS. FAMILY SEWING MACHINES. 495 Broadway, New York. A NEW STYLE—PRICE \$50. This machine sews from two spools as well as from the one, requiring no winding of thread. It sews FINE'S GARDEN and other patterns, without resort to the hand needle, and is operated by one machine. It will sew better and cheaper than any other machine, and is the work for one of its kind. Send for a circular. DANIEL HEINZ, Agent. April 19-30. Philadelphia, Co. Pa.

AFFLICTED READ! DR. GOLDMILLER, No. 42, South Street near Fifth Street, Pittsburgh, Pa. still continues to be successful in all cases of PHTHISIS or CONSUMPTION, and all other pulmonary affections, and all other affections of the lungs, and all other affections of the chest, and all other affections of the respiratory system, and all other affections of the circulatory system, and all other affections of the nervous system, and all other affections of the digestive system, and all other affections of the excretory system, and all other affections of the reproductive system, and all other affections of the generative system, and all other affections of the urinary system, and all other affections of the muscular system, and all other affections of the skeletal system, and all other affections of the integumentary system, and all other affections of the sensory system, and all other affections of the motor system, and all other affections of the locomotor system, and all other affections of the circulatory system, and all other affections of the nervous system, and all other affections of the digestive system, and all other affections of the excretory system, and all other affections of the reproductive system, and all other affections of the generative system, and all other affections of the urinary system, and all other affections of the muscular system, and all other affections of the skeletal system, and all other affections of the integumentary system, and all other affections of the sensory system, and all other affections of the motor system, and all other affections of the locomotor system, and all other affections of the circulatory system, and all other affections of the nervous system, and all other affections of the digestive system, and all other affections of the excretory system, and all other affections of the reproductive system, and all other affections of the generative system, and all other affections of the urinary system, and all other affections of the muscular system, and all other affections of the skeletal system, and all other affections of the integumentary system, and all other affections of the sensory system, and all other affections of the motor system, and all other affections of the locomotor system, and all other affections of the circulatory system, and all other affections of the nervous system, and all other affections of the digestive system, and all other affections of the excretory system, and all other affections of the reproductive system, and all other affections of the generative system, and all other affections of the urinary system, and all other affections of the muscular system, and all other affections of the skeletal system, and all other affections of the integumentary system, and all other affections of the sensory system, and all other affections of the motor system, and all other affections of the locomotor system, and all other affections of the circulatory system, and all other affections of the nervous system, and all other affections of the digestive system, and all other affections of the excretory system, and all other affections of the reproductive system, and all other affections of the generative system, and all other affections of the urinary system, and all other affections of the muscular system, and all other affections of the skeletal system, and all other affections of the integumentary system, and all other affections of the sensory system, and all other affections of the motor system, and all other affections of the locomotor system, and all other affections of the circulatory system, and all other affections of the nervous system, and all other affections of the digestive system, and all other affections of the excretory system, and all other affections of the reproductive system, and all other affections of the generative system, and all other affections of the urinary system, and all other affections of the muscular system, and all other affections of the skeletal system, and all other affections of the integumentary system, and all other affections of the sensory system, and all other affections of the motor system, and all other affections of the locomotor system, and all other affections of the circulatory system, and all other affections of the nervous system, and all other affections of the digestive system, and all other affections of the excretory system, and all other affections of the reproductive system, and all other affections of the generative system, and all other affections of the urinary system, and all other affections of the muscular system, and all other affections of the skeletal system, and all other affections of the integumentary system, and all other affections of the sensory system, and all other affections of the motor system, and all other affections of the locomotor system, and all other affections of the circulatory system, and all other affections of the nervous system, and all other affections of the digestive system, and all other affections of the excretory system, and all other affections of the reproductive system, and all other affections of the generative system, and all other affections of the urinary system, and all other affections of the muscular system, and all other affections of the skeletal system, and all other affections of the integumentary system, and all other affections of the sensory system, and all other affections of the motor system, and all other affections of the locomotor system, and all other affections of the circulatory system, and all other affections of the nervous system, and all other affections of the digestive system, and all other affections of the excretory system, and all other affections of the reproductive system, and all other affections of the generative system, and all other affections of the urinary system, and all other affections of the muscular system, and all other affections of the skeletal system, and all other affections of the integumentary system, and all other affections of the sensory system, and all other affections of the motor system, and all other affections of the locomotor system, and all other affections of the circulatory system, and all other affections of the nervous system, and all other affections of the digestive system, and all other affections of the excretory system, and all other affections of the reproductive system, and all other affections of the generative system, and all other affections of the urinary system, and all other affections of the muscular system, and all other affections of the skeletal system, and all other affections of the integumentary system, and all other affections of the sensory system, and all other affections of the motor system, and all other affections of the locomotor system, and all other affections of the circulatory system, and all other affections of the nervous system, and all other affections of the digestive system, and all other affections of the excretory system, and all other affections of the reproductive system, and all other affections of the generative system, and all other affections of the urinary system, and all other affections of the muscular system, and all other affections of the skeletal system, and all other affections of the integumentary system, and all other affections of the sensory system, and all other affections of the motor system, and all other affections of the locomotor system, and all other affections of the circulatory system, and all other affections of the nervous system, and all other affections of the digestive system, and all other affections of the excretory system, and all other affections of the reproductive system, and all other affections of the generative system, and all other affections of the urinary system, and all other affections of the muscular system, and all other affections of the skeletal system, and all other affections of the integumentary system, and all other affections of the sensory system, and all other affections of the motor system, and all other affections of the locomotor system, and all other affections of the circulatory system, and all other affections of the nervous system, and all other affections of the digestive system, and all other affections of the excretory system, and all other affections of the reproductive system, and all other affections of the generative system, and all other affections of the urinary system, and all other affections of the muscular system, and all other affections of the skeletal system, and all other affections of the integumentary system, and all other affections of the sensory system, and all other affections of the motor system, and all other affections of the locomotor system, and all other affections of the circulatory system, and all other affections of the nervous system, and all other affections of the digestive system, and all other affections of the excretory system, and all other affections of the reproductive system, and all other affections of the generative system, and all other affections of the urinary system, and all other affections of the muscular system, and all other affections of the skeletal system, and all other affections of the integumentary system, and all other affections of the sensory system, and all other affections of the motor system, and all other affections of the locomotor system, and all other affections of the circulatory system, and all other affections of the nervous system, and all other affections of the digestive system, and all other affections of the excretory system, and all other affections of the reproductive system, and all other affections of the generative system, and all other affections of the urinary system, and all other affections of the muscular system, and all other affections of the skeletal system, and all other affections of the integumentary system, and all other affections of the sensory system, and all other affections of the motor system, and all other affections of the locomotor system, and all other affections of the circulatory system, and all other affections of the nervous system, and all other affections of the digestive system, and all other affections of the excretory system, and all other affections of the reproductive system, and all other affections of the generative system, and all other affections of the urinary system, and all other affections of the muscular system, and all other affections of the skeletal system, and all other affections of the integumentary system, and all other affections of the sensory system, and all other affections of the motor system, and all other affections of the locomotor system, and all other affections of the circulatory system, and all other affections of the nervous system, and all other affections of the digestive system, and all other affections of the excretory system, and all other affections of the reproductive system, and all other affections of the generative system, and all other affections of the urinary system, and all other affections of the muscular system, and all other affections of the skeletal system, and all other affections of the integumentary system, and all other affections of the sensory system, and all other affections of the motor system, and all other affections of the locomotor system, and all other affections of the circulatory system, and all other affections of the nervous system, and all other affections of the digestive system, and all other affections of the excretory system, and all other affections of the reproductive system, and all other affections of the generative system, and all other affections of the urinary system, and all other affections of the muscular system, and all other affections of the skeletal system, and all other affections of the integumentary system, and all other affections of the sensory system, and all other affections of the motor system, and all other affections of the locomotor system, and all other affections of the circulatory system, and all other affections of the nervous system, and all other affections of the digestive system, and all other affections of the excretory system, and all other affections of the reproductive system, and all other affections of the generative system, and all other affections of the urinary system, and all other affections of the muscular system, and all other affections of the skeletal system, and all other affections of the integumentary system, and all other affections of the sensory system, and all other affections of the motor system, and all other affections of the locomotor system, and all other affections of the circulatory system, and all other affections of the nervous system, and all other affections of the digestive system, and all other affections of the excretory system, and all other affections of the reproductive system, and all other affections of the generative system, and all other affections of the urinary system, and all other affections of the muscular system, and all other affections of the skeletal system, and all other affections of the integumentary system, and all other affections of the sensory system, and all other affections of the motor system, and all other affections of the locomotor system, and all other affections of the circulatory system, and all other affections of the nervous system, and all other affections of the digestive system, and all other affections of the excretory system, and all other affections of the reproductive system, and all other affections of the generative system, and all other affections of the urinary system, and all other affections of the muscular system, and all other affections of the skeletal system, and all other affections of the integumentary system, and all other affections of the sensory system, and all other affections of the motor system, and all other affections of the locomotor system, and all other affections of the circulatory system, and all other affections of the nervous system, and all other affections of the digestive system, and all other affections of the excretory system, and all other affections of the reproductive system, and all other affections of the generative system, and all other affections of the urinary system, and all other affections of the muscular system, and all other affections of the skeletal system, and all other affections of the integumentary system, and all other affections of the sensory system, and all other affections of the motor system, and all other affections of the locomotor system, and all other affections of the circulatory system, and all other affections of the nervous system, and all other affections of the digestive system, and all other affections of the excretory system, and all other affections of the reproductive system, and all other affections of the generative system, and all other affections of the urinary system, and all other affections of the muscular system, and all other affections of the skeletal system, and all other affections of the integumentary system, and all other affections of the sensory system, and all other affections of the motor system, and all other affections of the locomotor system, and all other affections of the circulatory system, and all other affections of the nervous system, and all other affections of the digestive system, and all other affections of the excretory system, and all other affections of the reproductive system, and all other affections of the generative system, and all other affections of the urinary system, and all other affections of the muscular system, and all other affections of the skeletal system, and all other affections of the integumentary system, and all other affections of the sensory system, and all other affections of the motor system, and all other affections of the locomotor system, and all other affections of the circulatory system, and all other affections of the nervous system, and all other affections of the digestive system, and all other affections of the excretory system, and all other affections of the reproductive system, and all other affections of the generative system, and all other affections of the urinary system, and all other affections of the muscular system, and all other affections of the skeletal system, and all other affections of the integumentary system, and all other affections of the sensory system, and all other affections of the motor system, and all other affections of the locomotor system, and all other affections of the circulatory system, and all other affections of the nervous system, and all other affections of the digestive system, and all other affections of the excretory system, and all other affections of the reproductive system, and all other affections of the generative system, and all other affections of the urinary system, and all other affections of the muscular system, and all other affections of the skeletal system, and all other affections of the integumentary system, and all other affections of the sensory system, and all other affections of the motor system, and all other affections of the locomotor system, and all other affections of the circulatory system, and all other affections of the nervous system, and all other affections of the digestive system, and all other affections of the excretory system, and all other affections of the reproductive system, and all other affections of the generative system, and all other affections of the urinary system, and all other affections of the muscular system, and all other affections of the skeletal system, and all other affections of the integumentary system, and all other affections of the sensory system, and all other affections of the motor system, and all other affections of the locomotor system, and all other affections of the circulatory system, and all other affections of the nervous system, and all other affections of the digestive system, and all other affections of the excretory system, and all other affections of the reproductive system, and all other affections of the generative system, and all other affections of the urinary system, and all other affections of the muscular system, and all other affections of the skeletal system, and all other affections of the integumentary system, and all other affections of the sensory system, and all other affections of the motor system, and all other affections of the locomotor system, and all other affections of the circulatory system, and all other affections of the nervous system, and all other affections of the digestive system, and all other affections of the excretory system, and all other affections of the reproductive system, and all other affections of the generative system, and all other affections of the urinary system, and all other affections of the muscular system, and all other affections of the skeletal system, and all other affections of the integumentary system, and all other affections of the sensory system, and all other affections of the motor system, and all other affections of the locomotor system, and all other affections of the circulatory system, and all other affections of the nervous system, and all other affections of the digestive system, and all other affections of the excretory system, and all other affections of the reproductive system, and all other affections of the generative system, and all other affections of the urinary system, and all other affections of the muscular system, and all other affections of the skeletal system, and all other affections of the integumentary system, and all other affections of the sensory system, and all other affections of the motor system, and all other affections of the locomotor system, and all other affections of the circulatory system, and all other affections of the nervous system, and all other affections of the digestive system, and all other affections of the excretory system, and all other affections of the reproductive system, and all other affections of the generative system, and all other affections of the urinary system, and all other affections of the muscular system, and all other affections of the skeletal system, and all other affections of the integumentary system, and all other affections of the sensory system, and all other affections of the motor system, and all other affections of the locomotor system, and all other affections of the circulatory system, and all other affections of the nervous system, and all other affections of the digestive system, and all other affections of the excretory system, and all other affections of the reproductive system, and all other affections of the generative system, and all other affections of the urinary system, and all other affections of the muscular system, and all other affections of the skeletal system, and all other affections of the integumentary system, and all other affections of the sensory system, and all other affections of the motor system, and all other affections of the locomotor system, and all other affections of the circulatory system, and all other affections of the nervous system, and all other affections of the digestive system, and all other affections of the excretory system, and all other affections of the reproductive system, and all other affections of the generative system, and all other affections of the urinary system, and all other affections of the muscular system, and all other affections of the skeletal system, and all other affections of the integumentary system, and all other affections of the sensory system, and all other affections of the motor system, and all other affections of the locomotor system, and all other affections of the circulatory system, and all other affections of the nervous system, and all other affections of the digestive system, and all other affections of the excretory system, and all other affections of the reproductive system, and all other affections of the generative system, and all other affections of the urinary system, and all other affections of the muscular system, and all other affections of the skeletal system, and all other affections of the integumentary system, and all other affections of the sensory system, and all other affections of the motor system, and all other affections of the
