

Bellefonte, Pa., October 4, 1889.

The Rattlesnake

How Its Deadly Blows Are Delivered and It Vemen Injected.

Let us observe what happens when the rattlesnake means mischief. He throws him self into a spiral, and about one-third of his length, carrying the head, rises from the coil and stands upright. The attitude is fine and warlike, and artists who attempt to portray it always fail. He does not pursue, he waits. Little animals he scorns unless he is hungry, so that the mouse and toad he leaves for days unnoticed in his cage. Larger or noisy creatures alarm him. Then his head and neck are thrown far back, his mouth is opened very wide, the fangs held firmly erect, and with an abrupt swiftness, for which his ordinary motions prepare one but little, he strikes once and is back on guard again, vigilent and brave. The thrust is a stab, and is given by throwing the head forward while the half-coils below it are straightened out to lengthen the neck and give power to the motions which drive the fangs into the opponents flesh; as they center, the temporal muscle closes the lower jaw on the part stouck, and thus forces the sharp fang deeper in. It is a thrust aided by a bite. At this moment the poison duct is opened by the relaxation of the muscle which surrounds it, and the same muscle which shuts the jaw squeezes the gland, and drives its venom through the duct and hollow farg into the bitten part.

to enter, or the serpent mis-judges distance and falls short and may squirt the venom four or five feet in the air, doing no harm. I had a curious experience of this kind in which a snake eight feet six inches long threw a teaspoonful or more of poison athwart my forehead. It missed my eyes by an inch or two. I have had many narrow escapes, but this was the grimmest of all, An inch lower would have cost me my sight and probably my life.

A snake will turn and strike from any posture, but the coil is the attitude always assumed when possible. The coil acts as an anchor and enables the animal to shake its fangs loose from the wound. A snake can rarely strike beyond half its length. If both fangs enter, the wound is doubly dangerous, because the dose of venom is doubled. At times a fang is left in the flesh, but this does not trouble the serpent as a prisoner, since numberless teeth lie ready to become firmly fixed in its place, and both fangs are never lost rots. together. The nervous mechanism which controlls the act of striking seem of the experimenter if he has the nerve to hold on. Few men have. I have with the other food, and it will gain rapnot. A little Irish man who took care | idly. of my laboratory astonished me by coolly sustaining this test. He did it by dirt out of the wool, and affords a dry of my laboratory astonished me by coolly sustaining this test. He did it by closing his eyes and so shutting out for a moment the too suggestive view of a moment the too suggestive view of the whole the control of the wool, and affords a dry place for the sheep at night. The shed in which sheep remain at night should me what it is." Mrs. Fondwife—"I

gently most venomous serpents. I fancy however, that the vipers and the copperheads are uncertain pets. Mr. Thompson, the snake keeper at the Philabelphia Zoological, handles his serpents with impunity; but one day rection, yet scientists are divided on the having dropped some little moccosins question of the appropriation by plants Bostonian fervor, "is because he is the a few days old down his sleeve while he carried their mamma in his hand, one When some process is discovered by of the babies bit him and made an ugly wound. At present the snake which the nitrogen of the air can be utilized as a fertilizer—which is not imstaff is used to handle snakes. I saw probable—the cost of production will be one October, in Tangiers, what I had long desired to observe a snake charmer Most of his snakes were harmless; but he refused with well acted horror, to large quantities of manure are to be ac- words, Hood's Sarsapavilla will not do permit me to take hold of them. He had also two large brown vipers: these he handled with care, but I saw at once that they were kept exhausted of their venom by having been daily teased into biting on a bundle of rags tied on a stick. They were too tired to be dangerous. I have often seen snakes in this state. After three or four fruitless acts of instinctive use of their vnom they give up, and seem to become indifferent to approaches, and even to rough handling.—Dr. G. Weir Mitchll, in Century.

whole much maligned.

Michael Angelo.

A friend called on the great artist, who was finishing a statue. Some time after he called again; the sculptor was still at his work. His friend, looking at the figure, exclaimed .

You have been idle since I saw you "By no means," replied the sculptor.

energy to that limb.

these are trifles." "It may be so," replied Angelo, "but recollect that trifles make perfection, and that perfection is no trifle."

A Memory of Early Days.

Bane of childhood's tender years, Bane of childhood's tender years, Swallowed oft with groans and tears How it made the flesh recoil, Loathsome, greasy castor oil! Search your early memory close, Till you find another dose; All the shuddering frame revolts At the thoght of Epsom safts! Underneath the pill-box lid Was a greater horror hide, Climax of all inward ills, Huge and griping old blue pills!

What a contrast to the mild and Purgative Pellets, sugar-coated, easy to agony. Sold by druggists.

October Suggestions.

All weeds that have been mowed down should be consumed by fire, and not left to decay, as is frequently done. Burning them destroys many seeds and lessens the number of harboring places

It is claimed that board floors should not be used in stalls for colts, as they are too hard and cause injury to the feet. Nothing is as good as an earth floor for all animals that have tender feet.

No plum is free from the attacks of the curculio, but plums can be grown successfully if well cultivated and the trees kept vigorous. In the spring a few weeks work will greatly avoid injury

from the curculio. Cooked potatoes make excellent food for stock. The small potatoes, which cannot be sold to advantage, may be used for hogs and poultry. As an agreeable change for the cow, cooked potatoes are superior to turnips an beets.

A large flock of hens do not thrive as well as a smaller flock, owing to number of old cocks among them. Ofcrowding and competition. The scraps ten shippers wonder why they do not from the table amount to but little when get the highest market price for their given to large flocks, but for a few hens hens. Sometimes it is because they are they are of advantage and greatly reduce mixed lots. Good straight lots always

If manure is to be applied around young trees let it be done late in the fall, from Tuesday to Friday. Receipts genadvantage of covering the ground week, and there is usually enough car-

Cooking the food is an advantage, but one reason why it is not in universal practice is the cost of fuel and labor necessary to cook the food. A mess of cooked food two or three times a poultry. It is to shipper's interest as week will, however, greatly promote health and aid digestion.

Ground bone is a fertilizer that bene-In so complicated a series of acts there is often failure. The tooth strikes on tough skin and doubles back or fails any tree or plant; is permanent and lasting in its effects and is the cheapest form of fertilizer in proportion to the benefit it imparts that can be used.

Some one has calculated that a honeybee must insert its proboscis 500times into clover blossoms before one grain of sugar can be obtained. As honey contains three-fourths its weight of dry sugar each pound of honey represents 2,-500,000 insertions of the bees.

The crescent strawberry produces a large number of runners, and it is one of the best for planting if the matted row system is preferred. On light soils the Sharpless does not thrive well. The Wilson will grow and bear in all sections, and is still the best shipping berry hoard money

As the grass decreases give hay to the from green food to dry food. If the change is made suddenly the cows will fall off in milk. As an assitance to the green food (which will soon become

About one and a half pounds of corn will sufice as a grain ration for one sheep Omaha World. to be located in the spinal cord, for if | if the animal is given all the hay or we cut off a snakes head and then pinch grass it desires. The breeding ewes, the bard referred to when he wrote of its tail, the stump of the neck returns however, should be allowed oats in preand with some accuracy hits the hand ference to corn. To fatten a wether give "Really, I have no idea." "I bet you I

a moment the too suggestive view of the returning stump. Snakes have always seemed to me to be averse to striking, and they have been on the damp, sheep easily take cold, which is Any cool, quiet person moving slow accompanied with discharges at the nosly and steadily may pick up and handle trils. Dry shelter and bedding will greatly assist in warding off this difficul-

Although the question has been discussed since the time of Sir Humphrey very low, and all nitrogenous plants made to produce enormous crops.

The bottoms of all manure pits, if cumulated, should be well covered with impossibilities. Its proprietors tell plaincut straw, leaves, earth or anyother absorbent material. The heap should be made on stiff clay land, if possible, so as to avoid leaching of the liquids into the subsoil. The thicker the bottom is covered with absorbent materials the better of the system, to try Hood's Sarsaparilla. amount of valuable fertilizing carried down into the ground and lost is enor- ed in the result. mous, and much of it can be saved with

Well, well," said his friend, "but However, three years later he made up his mind to a 'now or never' game and with his brother visited her at Windsor Castle. Like more humble lovers he was placed in a rather embarrassing predicament by the non arrival of his luggage and was thus prevented from dining with her magesty on the first evening as her guest. For five days did Victoria study him, and then after telling her adviser, Lord Melbourne what she had decided to do, she sent for Albert, saying that she desired to see him particularly. One account of the affair, certainly valuable for brevity reads as follows: 'What the queen told him was that she loved him with her last Monday. gentle action of Dr. Pierce's Pleasant | whole heart, and that she desired to be his wife. She was accepted without Wednesday. take, sleansing, recuperating, renovating hesitation, as any good looking sovethe system without wrenching it with reign of twenty might have hoped to Mrs. Dashley—Yes, but—reign of twenty might have hoped to Mrs. Dashley—Well, I gue

Shipping Live Poultry.

There are a few points in shipping live poultry to which we wish to call attention. It is important from a money point of view, that the coops be light in weight, and from a sanitary point of view they should be airy, yet care should be used that they are strongly built and that they are in good condition before low the poultry, for which they are made, to stand up. Do not use coops for turkeys that were made for hens. nor coops for hens that were made for casions loss through suffocation.

When shipping hens and roosters, use separate coops. Nothing depreciates a coop of fine hens more than to find a command the best prices. Poultry should be shipped so as to reach market sacrifice, as the stock, when kept in coops, loses considerable in weight, and does not appear fresh and bright; besides Monday is usually a poor day to sell well as to the interest of the commission man, to have the poultry in market in good shape and upon good days. Think
