

Bellefonte, Pa., July 25, 1890.

THE DANDELION.

You kin talk about yer lilies and yer pansies

and yer rosies— They all of 'em is beautiful, the facts I ain't denyin', But fer me the very cunninest of all the lot er posies
Is the little early comer, jest the common

You scarcely know that winter's gone till all the sunny places Present a scene to flower hungry souls that's gratifyin';
There ain't no spot too humble for the purty golden faces
Of the little yeller beauty, jest the common

They make me think of human things when I behold 'em growin',
And then it sets me dreamin' when they're
ripe to see 'em flyin',
I know that purty soon my ripened soul will
be a blowin'
Away on heaven's breezes like the silken
dandelion.

I wouldn't want to speak the thought fer fear they'd say its silly:
But 't seems ter me that somehow it'll be more satisfyin',
If, when I'm dead, instead of givin' me a rose er bliv They'll let me hold within my hand a golden

-From the Chicago Herald.

Something to Avoid.

A little personal pique, a bit of and faithful work, and nullifies the most intelligent and wise action. It is one of the painful things in experience that effort is often defeated by these small, purely personal, and often momentary things, which are generally unintelligent and unwise. Life would be freed from some of its most painful do then?" features if men always acted to each other on a basis of real justice and intelligence, and left their small personal feelings and prejudices out of sight. A man's work ought to be judged by it self and for itself alone, and the strength of a man's position ought to rest solely upon what he is able to do. And yet most of us are constantly neutralizing the best work of others because it is not done in our way, and are constantly failing to do justice to others because of some small personal prejudice against them. The really strong, clear-sighted man is the man who is able to put himself out of the question and to judge others by what they greally are and do, not by their relation to him. In this working world there is neither time nor strength to be always coddling our small vanities and still smaller perjudices. The world does not stand in order that we may be pleased. It stands as a place for the doing of honest work in the best way, and if that work can be better done in some other way than the one we prefer, our business is to let it be done and rejoice in it. If you wish to see things clearly, and be just with your fellow-men, keep clear of the fumes of vanity and the thick atmosphere of mere personal feeling. Make it a rule to see what a man is and does, and value him by these things. A person may be very distasteful to us and yet be eminently useful and successfull in the world.

The Patent System.

It Was Established in 1790 on President Washington's Recommendation.

The year 1890 is the century of the United States patent system, which was established in 1790 by a law passed in accordance with a recommendation of President Washington. The report of the Commissioner of Patents for the last year shows that a grand total of patents issued up to the end of the year 1889 exceeded four hundred thousand. Evidently the more new things are invented, the more there are to invent, since nearly twenty-five thousand patents were granted in the year 1889.

Although the patent laws have been in existence a hundred years, the Patent Offie was not established until 1836. Before that time patents had been issued by the department of State. The Patent Office, indeed, remained a bureau of the State Department until 1847, when it was transferred to the Department of the Interior, which was then first established.

In the early years the issue of patents numbered from four to seven hundred a year. In fact, during the first fifty years, only about twelve thousand patents were granted—less than half as many as were granted in the single year

The liberal policy of the Government toward inventors, and toward industry to general, soon had the effect greatly in stimulate discovery and invention. The growth of industries and the development of labor-saving machinery and new processes of all kinds have gone hand in hand. It is estimated that twofifths of the important inventions of the world have originated in the United States.

The seats of manufacturing industry are also, generally speaking, the fields of the most active invention. Among the States and Territories New York, by far the most populous, leads in the number of patents granted to her citizens.

She received more than four thousand last year. Pennsylvania stands second on the list, and Massachusetts third, while the distinctly agricultural States come last; but even Indian Territory had two patents granted to her citizens during the

But while New York leads in the aggrigate number of patents, the State which leads in the number granted in proportion to the population is Connecti-cut. The people of that State have remained the most inventive, mechanic- Mr. Bonner has had numerous requests ally speaking, ever since their ingenious | to raffle them off at church and charity and cheap clock began to go all over the world, and they were accused, no check for their value rather than part doubt falsely, of making nutmegs out of with either.

basswood. The District of Columbia ranks next to Connecticut in the number of patents | died recently in Aurora, In., and the issued in proportion to population, and next day friends, while looking about Massachusetts follows closely. The her house, found a \$500 Government high position of the District of Columbia in the lists is not due to its industries, but to the fact that many inventtries, but to the fact that many invent-ors go to the capital of the country to found a tin can containing \$5,000 in take out their patents.

The Commissioner of Patents calls attention to the interesting fact that although the number of patents granted has greatly increased, the ratio of issued patents to applicants is now about the same as it has been ever since 1840 namely, about sixty per cent.

For every patent a fee is charged, and the fees bring in a large revenue. The receipts of the patent office in 1889 were more than two hundred thousand dollars in excess of the expenses.-Youth's Companion.

'Twas None of His Business.

A Most Remarkable Case of Strict Attention to One's Own Affairs.

For cool self-possession or a remarkable display of indifference in trying and exciting times, the decendants of Ham when they want to are hard to discount. This fact was forcibly illustrated in an incident connected with the recent trial of the Chambers case at Ironton. It will be remembered that one of the principal witnesses for the defense was Frank Jenkins, a negro and an eye-witness of the tragedy. Frank was whitewashing a chicken-coop only a few feet away when the shooting occurred. On the direct examination he told his story in a plain, straightforward way and his evidence was very material. The cross examiner propounded the usual questions and made a strenuous attempt to tangle the witness in giving his testimony Concerning the facts immediately pre-ceding and at the time of the shooting, wounded vanity, a sudden flame of a question would be asked Frank, to anger, often undoes the most substantial which he would give the following reply when the attorney would ask: "What did you do then?"

"I just went on whitewashing the chicken-coop." "But when the defendant appeared with the gun and it seemed as if someone was going to be hurt, what did you

"I kept on whitewashing the chickencoop. It was none of my business, and where I came from in Woodward county, Kentucky, I learned not to interfere with two white gentlemen engaged in settling a question of honor I turned up one end of the coop and kept right on with my whitewashing."
"When the shot was fired what did

vou do? "Kept right on whitewashing." "Did you do anything when they removed the body?

"Yes; kept right on with my whitewashing.' The judge smiled, the spectators tittered and the whole court-room appreciated this wonderful display of disposition to attend strictly to one's own

What Horace Greely Said.

The Speech That Put Him in the Same Class With Grant and Casar.

"When I was a young man," said Lawyer Park of Aurora. "I was a political speaker. My father was living in Waukegan during the presidential campaign in which General Grant was the nominee of the Republican party and Horace Greeley the nominee of the 'Liberal Republicans,' indorsed by the Democrats. I was on a campaign tour through Wisconsin. I had an audience on the occasion to which I now call your attention that was with me in in my sentiments. When I had reached the warming-up part of my speech I said that every eminent man who had lived, or who were living, had uttered some words that would live forever. In proof I quotedfrom Cæsar's Veni, vidi, vici, down to Grant's 'I proposeto fight it out on this line if it takes all summer.' Having arrayed these sayings of great men, I stood on tip-toe and asked with oratorical anguish:
"What did Greeley ever say?"

"There was a hush on the heels of this inquiry that lasted until it was painful to me. As I was about to proceed, a little man with a head of firy red hair arose in a back seat in the building and answered in a shrill voice:

"Go west, you damned fool." "The audience howled and yelled and fairly rolled from their seats. I didn't finish my speech. The red-haired man who had unwittingly punctured my oratory had broken up the meeting,"

THE INQUISITIVE TRAMP .- - "Madam" said the tramp, politely, "you will par-don my ragged condition, but I was back. Is there a man about the house?" thrown from my carriage a few miles

"There is," returned the matron at the door. "My husband is in the barn, my son is behind the tree over yonder, and the hired man is around the corner. Shall I call them for you?"

"I will not trouble you," answered the tramp, bowing low. "My curiosity is gratified. Can you tell me whether your neighbor has any dogs ?"-New York Sun.

--- "It is not generally known, even among shoe dealers," said a shoe man-ufacturer, "that the hooks which serve in place of eyes for the laces of men's shoes were invented by a little old watchmaker in Aurora Springs, Mo. His name is Klinger, and he still lives there, working at his trade. He sold his patent for the hooks to a Boston man who was out there looking for health, the price paid being \$500. Last year the royalties on these hooks yielded the present owner of the patent the neat income of \$300,000.

A GREAT TROTTER'S SHOES. - The shoes worn by Maud S. are kept in Mr. Bonner's writing desk. Two of the pair in which the beautiful trotter made her last record are displayed in a wall cabinet and have a value of \$500 each. fairs, but preferred always to give his

-Every tissue of the body, every nerve, bone and muscle is made strong er and more healthy by taking Hood's Sarsaparilla.

----A Pittsburg doctor says he can diagnose ailments by examining a single hair of the patient. Two young men, as a joke, took him a bair from a bay horse. The doctor gravely wrote a prescription, and said his fee was \$25, as the case was pecarious. They were staggered, but paid the fee, and after they got out laughed all the way to the apothe-cary's. The latter took the prescription and read in amazement: "One bushel of oats, four quarts of water, stir well, and give three times a day-- and turn the animal out to grass!" Then

"NEWS."-The word "news" is deriveo from the initial letters of the four points of the compass-North, East, West and South. To all points of the compass let the good news go that for deranged liver, nervous headache, costiveness, impure blood, nausea, and many other disturbances of the system that make men mourn, there is a remedy. Thousands testify that Dr. Pierce's Pleasant Purgative Pellets cure these troubles. Small but potent; one a dose.

PICNIC NECTAR. -To one quart of new milk and the beaten yelks of two eggs and one tablespoonful of triple extract of lemon, frothed well. Let it boil up once, remove from the fire, cool, bottle. Served in glasses with cracked ice. Make on the morning it is wanted for the beach party. A large quantity may be made, and part of it flavored with vanilla if desired.

New Advertisements.

I have been afflicted for twenty years with an obstinate skin disease, called by some M. D.'s Psoriasis' and others Leprosy, commencing on my sealp; and, in spite of all I could do, with the help of the most skilful doctors, it slowly but surely extended, until a year ago this winter it covered my entire person in the form of dry scales. For the last three years I have been unable to do any labor, and suffering intensely all the time. Every morning there could be nearly a dustpanful of scales taken from the sheet on my bed, some of them half as large as the envelope containing this letter. In the latter part of winter my skin commenced cracking open. I tried everything, almost, that could be thought of, without any relief. The 12th of June I started West, in hopes I could reach the Hot Springs. I reached Detroit, and was so low I thought I should have to go to the hospital, but finally got as far as Lansing, Mich., where I had a sister living. One Dr.—treated me about two weeks, but did me no good. All thought I had but a short time to live. I earnestly prayed to die. Cracked through the skin all over my back. across my ribs, arms, hands, limbs; feet badly swollen; toe-nails came off; finger-nails dead, and hard as a bone; hair dead, dry, and lifeless as old straw. O my God! how I did suffer. My sister, Mrs. E. H. Davis, had a small part of a box of Curicura in the house. She wouldn't give up; "We will try Curicura." Some was applied on one hand and arm. Eureka! there was relief; stopped the terrible burning sensa sensation from the word go. They immediately got the Curicura, Curicura Resolvent, and soap. I commenced by taking one table-spoonful of Resolvent three times a day, after meals; had a bath once a day, water about blood heat; used Curicura Soap freely; applied Curicura morning and evening. Result: returned to my home in just six weeks from the time I left, and my skin as smooth as this sheet of paper.
