Abbey began as a cornet Gold has often been found in the Light and Heavy Harness Four trips per Week Between player at Akron, Ohio. neighborhood of the town, and not very ever put on the Bellefonte market, which will be made in the large room, formerly occupied by Harper Bros., on Spring street. It has been added to my factory and will be used exclu-sively for the sale of harness, being the first exclusive salesroom ever used in this town, as heretofore the custom has been to sell goods in the room in which they were made. This elegant room has been refitted and furnished with glass cases in which the harness can be nicely displayed and still kept away from heat and dust, the enemies of long wear in leather. Our factory now occupies a room 16x74 feet and the store 20x60 added makes it the largest establishment of its kind outside of Philadelphia and Pittsburg. We are prepared to offer better bargains in the future than we have done in the past and we want everyone to see our goods and get prices for when you do this, out of self defense you will buy. Our profits are not large, but by selling lots of goods we can afford to live in Bellefonte. We are not indulging in idle philanthropy. It is purely business. We are not making much, but trade is growing and that is what we are intræsted in now. Profits will take care of themselves. When other houses discharged their work-men during the winter they were all put to work in my factory, nevertheless the big () houses of this city and county would smile if we compared ourselves to them, but we do not mean to be so odious, except to venture the as-section that none of them can say, as we can say "NO ONE OWES US A CENT THAT WE CAN'T GET." This is the whole story. The following are kept constantly on hand. It may be taken for granted that many readers will be interested to learn how the colored fires, with which the "birthday of our country" is popularly celebrated are prepared. The process of combining the materials is simple Striking differences in color produced by slight changes in composition. The "Western Druggist" gives some form-

12: 4

For the production of red, green, yel-low and blue fires, one-fifth part of the composition is shellac. As this is a constant quantity it is apparent at once that the shellac has nothing to do with determining the color. It serves the purpose that charcoal does in the manufacture of gunpowder. It holds the other elements in desired form, and regulates the rate of combustion.

compounds is the chlorate of potassium. This is used for the detonating effect; to startie the beholder with the crackling sound, and with the scattering of the fire. Of itself it would give a white light, and would burn with intense en-

give color to the flame. They differ, of course, in the four compounds. For producing red fire nitrate of strontium is used; for green, nitrate of barium; for yellow, nitrate of sodium, and fo blue, ammonia sulphate of copper. As we find nitrates used for the first three colors named, it is plain that the effect is determined wholly by the use respectively of strontium, barium and sodium. It is equally true that blue is the result

posite. To produce the violet, lime and copper and sulphur are burned together. For purple, strontium and calomel are burned with just a little copper. The fumes of calomel are particularly harmful, and all these substances yield gases that ought not to be freely breathed. Very striking effects could be obtained by using nickel, arsenic and other similar elements, but their use would be dangerous to health.

## Weather Prophet Foster Predicts Cold

Weather Prophet Foster makes the following predictions :

A remarkable period of great storms will occur during the first half of October that will be surpassed only by those that will occur in March, 1892. There will be three storm waves during this period, which will cross the continent from west to east along the usual storm centre. The first of these storm waves will be most severe in the Mississippi Valley, and the last on the Atlantic coast.

The first will be due to leave the Pa cific coast about Sept. 3, cross the Allegheny valley from Oct. 1 to 3, and reach the Atlantic coast about the 4th. On the 2nd the storm wave will be

Fashionable men in Paris and Lon-

don are now using electricity as a cure for excessive tippling. The claque has been discarded at the

- -BELLEFONTE, PA.---

crossing the Mississippi river not far from St. Louis, and will then be of very considerable force in Illinois and Mis souri. Accompanying this storm wave may be expected tornadoes, cloud bursts, hail and severe gales, and within one or two days following it killing frosts will visit most localities with latitude 36, with a strong probability of frosts much further south. Hurricanes will develope great force on the North Atlantic at this time, but I cannot give their exact location, but they will probably be not far east of the West Indies. These hurricanes will become very fierce along the Atlantic coast from October 1 to 18.

These October storms will indicate what the coming winter will be. I expect great storms from the 1st of Octo-ber to the last of march, and if this period of storms covering the first half of October proves to be of more than usual force, it will indicate that I have not miscalculated the weather, and we may then confidently expect a very cold, severe, and stormy winter setting in quite early. Saturn will pass its equi-nox the last of October, and to that influence I attribute the great increase of storms since the middle of last May.

### Mr. Green Understood It.

Some good stories are told of Thomas Reynolds, who began his duties as an associate justice of the supreme court of this state early in September, 1822. Not all of them are true, and the one that follows has been denied. but it may be worth repeating nevertheless. Governor Ford is authority for it :

Judge Reynolds presided at a court in which a man named Green had been convicted of murder, and it became his unpleasant duty to pronounce sentence of death upon the culprit. He called the prisoner before him and said to him : "Mr. Green, the jury in its ver-dict says you are guilty of murder, and the law says you are to be hanged. Now I want you and all your friends down on Indian . sreek to know that it is not I. who condemns you, but it is the jury and the law. Mr. Green, the law allows you time for preparation, and so the court wants to know what time you would like to be hanged.' The prisoner replied that he was ready

to die at any time the court might appoint. The judge then said : "Mr. Green, you must know that it is a very serious thing to be hanged ; it can't happen to a man more than once in his life, and you had better take all the time you can get. The court will give you until this day four weeks. Mr. Clerk, you look at the almanac and see if this day four weeks comes on Sunday."

The clerk looked and found that it came on a Thursday, and the court informed Mr. Green that he would be hanged on that day. The attorney general of the state, James Turney, wanted a more formal and impressive sentence passed, but the court replied : "Oh, Mr. Turney, Mr. Green understands the whole matter as well as if I had preached to him for a month. He knows he has got to be hanged this day pity on the boy and got him a place in four weeks. You understand it in that a grocery. The daughter of that old la-

No matter where I go to lunch, that red-headed girl is sure to pass me on the way. Every day I meet her on the "L" car. I change the line, but sure as fate there she is If I go out between the acts at the theatre that red-headed girl walks by. And so it goes, until now I have come to absolutely dread her. The worst of it is that she is a nice looking girl and never seems to see me.

### Amount of Sleep Required.

Sleep is the principal agent in body's recuperation. The amount needed is different for different persons. For the ordinary worker from six to eight hours is necessary; yet how often, in the battle for existence, is the desire for sleep forcibly suppressed and the night's rest foolishly shortened. Sooner or later insomnia wrecks its ven geance on the physiological sinner. Many a person who once robbed himself of the necessary amount of sleep would now gladly sleep, but cannot.

Many nerve troubles first develop in to disease when joined with sleeplessness. It appears as a symptom of a long standing nervous disturbance, but to many it appears as the first signs of disorders, when it is only a result of causes in operation long before.-Her ald of Health.
