

Bellefonte, Pa., May 27, 1892.

VEGETABLE POETRY.

Potatoes came from far Virginia;
Parsley was sent us from Sardinia;
French beans, low growing on the earth,
To distant India trace their birth;
But scarlet runners, gay and tall,
That climb upon your garden wall—
A cheerful sight to all around—
In South America were found.
The onion traveled here from Spain;
The leek from Switzerland we gain,
Garlic from Sicily obtain,
Spinach in far Syria grows.
Two hundred years ago or more,
Brazil the artichoke sent o'er,
And South Europe's sea-coast shore
Beet-root on us bestows.
When 'Lizabeth was reigning here,
Peas came from Holland and were dear.
The South of Europe has its claim
To beans, but some from Eypt came.
The radishes both thin and stout,
Natives of China are, no doubt;
But turnip, carrots, and sea-kale,
With celery, so crisp and bale,
Are products of our own fair land.
And cabbage, a goodly tribe,
Which all the store of the store of the search of t

Odd Facts About Snakes.

None of the Large ones ArePoisonous—The Rat-tlers are the Longest—How the Fangs Are Drawn—Cutting the Artery of the Poison Bag

All snakes are naturally vicious, but they are not all poisonous, None of the larger varieties are poisonous, and you can always tell a poisonous snake by the formation of its head. which is shaped round; back of the eyes is a high lump, rising from inside the head. The harmless snake has a long head, and it kills by crushing, while a poisonous snake darts at you. The anacondas hardly ever bite, and in Brazil it is quite common for a householder to keep a few of them around his residence for the purpose of killing the rats, which are a great pest in that part of the world.

Among the poisonous snakes there is the variety known as the coral, which is found in Venezuela. Any one bitten by a coral snake dies in the most horrible agony, his blood bursting or oozing out through the pores of his skin. Any snake that measures over seven or eight feet is not poisonous; in fact, I do not know any that grow over six feet long. The rattlesnake is the largest poisonous snake we have in this country. Then there are the deaf adder, the black water snake, the moccasin. These are about the only poisonous snakes we have in the United States.

The men who call themselves "snake charmers" do not handle poisonous snakes. If they have a rattlesnake they extract his fangs, and in that way render him perfectly harmless. This operation is easily performed by means of a silk handkerchief, which is waved in front of the snake, who snaps at it viciously, when the handkerchief is suddenly pulled away, bringing the fangs Or you can cut the artery that teeds the poison bag and thus destroy the source of supply. This is a rather difficult operation, however, although I have often had occasion to perform it on rattlesnakes. Something, generally a piece of cork, is put in the snake's mouth to keep it open; the teeth of the reptile become imbedded in the cork and you have a chance to cut the artery, Taking the teeth out of a rattlesnake is like pulling the feathers out of a bird, they will form again. Snake shed their teeth

just as cats sted their claws. Another point about snake charmers. After you have handled snakes for a considerable length of time they become very quiet. To a certain extent you can make a pet of a snake as you can of many other animals, and as I have said, the large varieties seldom bite; handling them seems to deaden them.

Snake charmers keep their animals well fed and they become so sluggish as to offer no resistance when they are handled carefully. It is very fortunate for the snake charmer that the largest and most showy reptiles in the world are not poisonous.

Small boa constrictors are worth \$15. large ones \$150; very large specimens, \$300. The Indian boa-constrictor, a very large, showy reptile, about 25 feet long, commands a big price, one only 10 feet long being worth \$75 or \$100.

The other day I was bitten by one of my snakes; he got hold of my forefinger. In such a case you thrust your finger down his throat. Do not attempt to pull it out, becomes their fangs project backward. After thrusting the finger back for a while he will begin to choke and open his moth, when you can pull your finger out. The right way to grasp a snake is to hold him firmly with one hand just below the head,

DONALD BURNS.

An Evtinct Race.

The Beothick Indians of Newfoundland, at one time the aboriginal inhabitants of the Island, can now only be counted by one or two skeletons and a few skulls, so completely have they been swept away, The French employed the Mic Mac Indians of Novo Scotia to fight against and exterminate them. According to an account in the late issue of the Transactions of the Canadian Institute they were a peaceable and quiet race given to hunting and fishing.

They used canoes made of birch rind and of skins of deer, like the Esquimaux cayak. They had no pottery and used utensil of birch rind sewed together, but they employed soapstone dishes as lamps, their form being similar to those among the Esquimauz at the present day. They carved deer and walrus horns and the bones of the seal into ornaments which they wore on their dresses and ornamented their heads with combs. The carvings are in a triangular patterns, and out the large collections in the museum at St. John's there are no two ornaments having the same pattern. Their stone implements were more rudely canstructed than those of the western Indians.

----Colorado appears to show a surplus of commemorative holidays. Among the anniversaries celebrated in the State are Watermelon Day, Peach Day, Potato Day and Grape and Cherry

Blood poisoned by diphtheria, the Grip, typhoid fever, scarlet fever, etc. is made pure and healthy by Hood's

The First Umbrella in England.

It was a cumbersome machine that good Jonas Hanway, traveler and philanthropist, brought home with him to England, in 1750, and used to protect himself from rain and sun, despite the jeers of the unmannerly mob who hooted at his effeminacy, Hanway was the first man to habitually carry an umbrella in England, although they were known to travelers long before his day. says the Stick and Umbrella News. That used by Hanway was an imposing structure and would attract as much attention in our streets as it did 140 years ago when the street boys ran atter and hoot ed its eccentric owner.

Tourists.

'Nothing Ne w Under the Sun."

No! not even through cars to Denver, Ogden Salt Lake City, San Francisco and Portland. This is simply written to remind you that The Union Pacific is the Pioneer in running through cars to the above mentioned points, and that the present through car arrangement is unexcelled. We also make the time. For details address any agent of the company, call on your nearest ticket agent or write to E. L. Lomad, G. P. & T. A. U. P. System, Omaha, Neb.

Oregon, Washington and the Northwest Pacific Coast.

The constant demand of the traveling public to the far West for a comfortable and at the same time an economical mode of traveling, has led to the establishment of what is known as Pullman Colonist Sleepers.

These cars are built on the same genera plan as the regular first-class Pullman Sleeper the only difference being is that they are not upholstered.

They are furnished complete with good com fortable hair mattresses, warm blankets, snow white linen curtains, plenty of towels, combs brushes, &c., which secure to the occupant of a berth as much privacy as is to be had in first class sleepers. There are also separate toile rooms for ladies and gentlemen, and smoking is absolutely prohibited. For full information send for Pullman Colonist Sleeper Leaflet. E. L. Lomax, General Passenger and Ticket Agent, Omaha, Neb.
