FARM NOTES.

-Lumpy jaw in cattle is an annoyance dreaded by dairymen. An Ontario farmer reports that he has used spirits of ammonia for years and cured every case, no matter how bad it was. He rubs it on the lumps or jaw once or twice a day, and the diffi-culty gradually disappears. The remedy is a very simple one and is easily tested.

-All classes of poultry require warmth and care in winter. No amount of corn will induce the hens to lay if they are not provided with dry, warm quarters. Eggs are high during cold weather, and it will pay to keep the hens in good laying condition. If they must roost in the tree tops they will not begin to lay until spring and losses will occur from cold and disease.

-The usual treatment of peach pits in nurseries is to bed them out over and let the frost act on them, but this is not absolutely necessary. The pits may be planted in the spring, provided they have been preserved properly. They may be planted where the trees are expected to remain, but it is better to sow them in the nursery rows first and then transplant the trees after they have been budded

-The best method of handling hen manure is to keep constantly some dry muck, earth, soil or sand under the roosts and clean it out at least once a week. Then mix all with three or four times its bulk of dry soil or muck, and keep in a perfectly dry place. Work over whenever the heap commences to heat until ready for use. Such fertilizer should not be plowed or spaded under deeply, but lightly raked or harrowed in the ground at the time of

-Here are a few facts which may be preserved for reference. In 100 pounds of milk there should be 16 pounds of cream, from which should be made three and a quarter pounds of butter. One quart of milk weighs two pounds and three ounces, and a quart of cream containing 25 per cent. of fat should weigh two pounds one and a quarter ounces; half a gallon of cream should make a pound of butter. One pound of butter fat should make 1.15 pound of butter; that is, add 15 per cent. to the butter fat to estimate the butter. Of course, milk and cream vary, but the above is about correct for an average.

-The oat crop ripens later than other small grains. It therefore gives less time to prepare the seed bed from its stubble for sowing either wheat or rye. Yet if the land is plowed as soon as the grain is off and and the field is immediately harrowed and rolled so as to preserve its moisture a good seed bed may be made. Oat stubble is soft and rots quickly when buried in moist soil. There is another objection to sowing wheat after oats in the fact that both are exhaustive, especially of mineral fertility. But a dressing of 150 pounds of standard phosphate will replace what the

-The cow may possess all the markings of superiority, such as perfect escutcheon, large udder, well-shaped teats, etc., but the chief point is her capacity to consume heart, lungs, liver and stomach, which is not possible; but dairymen are content to form a favorable opinion of a cow in that respect if she has a deep body, indicating the possession of large digestive organs. Long experience has taught progressive dairymen that a cow having a wedgeshape form, the rear being wide; the udder large and extending well both front and back, with the teats set regularly and well apart, is usually one that will not disappoint her owner, but as the individuality of the animal is also a factor in the breed the disposition. freedom from disease and quality of the product must be considered, especially as no two cows are alike and the quantity and quality of the milk and butter may vary with the same individual The calf should also conform to the shape of the cow, and even the embryro udder will give some indications of its future. An experienced breeder gives this rule for judging a cow or calf by its appearance: With the eye measure the distance from the tail about half way down the rump, as it drops straight down, to the rear line of the thigh, and the greater the

-There are various ways of stacking corn fodder. A writer in the Ohio Farmer gives description of his method. He

I begin the stack the same as a shockthat is, by standing bundles almost perpendicularly on the ground, butts down and tops pressed together. I continue in this way, placing the bundles close to-gether, until the shock, or prospective stack, is about 12 feet in diameter at the base (ground). This usually requires 50 or 60 bundles. Next, instead of getting up on this shock, or stack bottom, and having some one pitch the bundles to me while I lay them down horizontally, as is usually done, I remain on the ground and continue there till the last bundle is placed, when a ladder is leaned against the stack and the top tied.

The bundles for the next or second elevated course are placed in order by means of a two tined pitchfork. The butts of this course are about six feet from the at Washington the articles in Republican

The butts of the third or last course, consisting of, say, eight or ten bundles, are placed about nine feet from the ground. ident McKinley's Favors," "To the Victors Belong the Spoils," "Good Men Go This makes a stack about 14 feet in height. In," &c. But things are different now. When the last course is placed in order, the top of the stack is securely tied in two places-one within a foot or two of the extreme top and the other around the butts

of the top course. Two men are not required to put up this kind of a stack. I built ten such stacks this year myself without any assistance. I put in about 120 bundles in a stack.

In stacking in this way there are no bundles lying down with the butts stick- any others. ing outward, as in stacks as usually built. They all stand up in an almost perpendicular form—butts down, tops up. The bundles having so much "pitch" they shed

no part of the stack exposed to the weather. Potts Green.

A Tramp's Luck.

Falls Heir to a Part of a Fortune of Fifteen Million

Jacob Wilson, aged 52, who came to this State (California) a tramp, and applied for work in Tulare county for his board, has received word that the United States Sumost certain.

deadly work of the yellow fever if it takes the form of an epidemic, as now seems almost certain. that will give him a good portion of a \$15,000,000 estate. The suit was brought in
North courts in 1886, and affects

broker of Wall street. Young Wilson, according to his story, in 1873 married a woman who was a nurse in the family. The family raised a row and Wilson went to Australia with his wife. years interim has been penniless and a wanderer. Last week he received the news that his suit had been successful, but frost will have to be he is only modestly elated over it.

He is particularly bitter against his sisand hungry, he went to the door of her home in the aristocratic part of Pittsburg New Orleans, which is now menaced, is

to keep him barely alive when he received news of his good fortune. Wilson is now in Stockton, arranging with a firm of law-yers to secure his inheritance.

Murdered All His Family.

Farmer Boecker Kills His Wife and Six Children and Fatally Wounds Himself.

John Boecker, a farmer, near Carrol, Ia. Monday night murdered his wife and six children, Caroline, aged 14; Christine aged 9; Henry, aged 8; Lizzie, aged 6; John, aged 3, and an infant. He then shot himself, inflicting a fatal wound. The family were prosperous Germans and appeared to live happily. The murderer used a revolver and a shot gun, and when neighbors broke into the house to-day, they found the corpses of the wife and children stretched on the beds in their night clothes. Boecker was 34 years ald, and had been married 11 years. His father and brother live nearby, and it is said he had disagreed with them concerning the farm on which

Fever in Texas.

A Small Boy at Beaumont Died of the Dread Malady-The Mails Are Blamed for This Spread. The yellow fever has appeared in Texas. Governor Culbertson has been informed that a genuine case of yellow fever was in existence at Beaumont. The case, which was that of a small boy, was genuine yellow fever, and the boy has died. Many people are led to think that the mail service is bringing the fever into the State, oat crop has removed, and on most land and Governor Culbertson will be asked to secure a better wheat crop on the stubble than could be made on a summer fallow without the phosphate.

entirely cut off all the train service of any kind between Louisiana and Texas. Beaumont from now on will be closely sur-

As to Potatoes.

and digest a large quantity of food, as it is and digest a large quantity of food, as it is from the food that she produces milk and butter; hence it may truly be said that to butter; hence it may truly be said that to fore putting potatoes in the cellar they should be looked over carefully and all afshould be looked over When potatoes are already infected with apt to destroy all sound ones it touches. Air-slacked lime is sometimes used to sprinkle over a bin of potatoes to absorb moisture and thus check the spread of disease. Keeping in a cold dry cellar will have a like effect. It is well to sort over potatoes a few weeks after they are stored, remove the rotten ones and so prevent further rotting.

> -One happy result, and perhaps the gulf region is that all the cities and towns thereabouts are giving themselves a thorough cleansing. In Galveston a special appropriation has been made to clean the streets and gutters, and in Mobile, Houston, Birmingham and other towns the work of general disinfection is being pushed as it has not been before in nearly twenty years. A sure result of this will be a lower death rate next winter when more than enough lives will be saved to balance those lost by the fever now.

distance between those points, and the more curving of the thigh, the better the more curving of the thigh, the better the more curving of the thigh. The better the more curving of the thigh, the better the more curving of the thigh. The better the more curving of the thigh, and the greater that we will guarantee Dr. King's New Life Pills, nica Salve, or Dr. King's New Life Pills, that we are authorized by the it means that we are authorized by the proprietor to sell these remedies on a positive guarantee, that if purchaser is not satisfied with results, we will refund the purchase price. These medicines have been sold on this guarrntee for many years and there could be no more conclusive evidence of their great merit. Ask about them and give them a trial. Sold at F. Potts Green's drug store.

> President McKinley should avoid the charge of nepotism. The appointment of cousin William McKinley Osborne to the best paying diplomatic position in the President's gift, that of the Consul-General to London, was quite generally over-looked. But another cousin, F. E. Mc-Kinley, of New Mexico, has been appointed to an office in Oklahoma, violating both the proprieties and the principle of home rule for the territories.

-When the Democrats were in power ground, and, like the butts of the first elevated course, come to about the middle of the bundles underneath.

Key West is another city that has no frost, and to add to the misfortune of the situation, the city is nearly always in danger of an epidemic, being situated where the fever first begins its ravages. For six years Key West has had no fever. Back of that time the records have not been consulted, but it is said that the city never has a killing frost.

Galveston, situated on an island in the gulf, is still another fair Southern city where frost only rarely occurs, and where the fever is very liable to prevail with disastrous results.

In Edwards, Miss., where the fever is now raging, the frosts are always very late. Jackson, the capital, only a few Edwards, for it will be two months before frost will appear to end the epidemic there. On an average the first frosts appear at Edwards about the middle of November. Before that time the epidemic can sweep away the populations of the biggest cities

Mobile will have the fever for two months if it gains a much firmer foothold. In that unhappy coast town, where the fever is now claiming its victims, frosts may not come until the new year. In '92 the first frost did not fall before December 23rd, two days before Christmas.

The section to the north is practically free from fever except in coast and river towns. In this ceed to New York, where she will land her section are Atlanta, Augusta and Shreve- meteorite. port.

Walker Dunson, of Atlanta, tells of the case of his brother, who died of vellow only one, of the yellow fever scare in the fever in 1888, and the facts as related go to sustain the statement that yellow fever

cannot spread in this climate: "In 1888 yellow fever became epidemic in Gainesville, Fla., and W. E. Dunson, a prominent young attorney of that city, took yellow fever. He left Gainesville, but when only a few miles from there he was stricken, and, being unable to secure proper treatment in the country, it was deemed best to bring him to Atlanta, and carry him to La Grange, Ga. Walker Dunson, of Atlanta, his brother, secured a health certificate here and went at once to Newmansville, Fla., near Gainesville, to bring him to Atlanta. He was found near that town in a somewhat delirious state of mind caused by the fever. The whole country was completely demoralized, strangers were regarded with great suspicion and only an old deserted office could be secured in which to spend the night to await the departure of the train next morning. One day and night was spent on the train, and, as the stricken man was quite sick and delirious, the two brothers occupied the same seat and berth on the train. They arrived safely in Atlanta, remained here about 12 hours, and then the sick man was carried down to La Grange and taken to the home of another brother. The attending physician, who had had experience with yellow fever patients in New Orleans, pronounced the disease a genuine case of yellow fever. Mr. Dunson lingered about two weeks, and died of yellow fever. His body was as yellow as an orange when he died. Everybody who knew of the case believed it was yellow fever. No other member of the family or anyone else who came in contact with him when sick took the dread disease.

After the South Pole.

NEW YORK, Sept. 28.-Frederick A. Cook, who was a member of Peary's Greenland expedition in 1891, sailed from here to-day on the steamer Coleridge for Montevideo, where he will join the Gerlach Antarctic expedition. He hopes to reach the south pole.

The Gerlach expedition under command

of Lieutenant Adrian De Gerlach, left Antwerp July 25th, in the Belgiac, a whaling ship especially strengthened and fitted up for the perilous undertaking. The Belgiac is provisioned for two years. Every man of the twenty-five on board here is experienced and ready to face any new dan-gers. As far as known Dr. Cook will be the only American in the party, and his duties will be purely scientific. A balloon, which is now on the Belgiac, will be utilized if possible, for taking observations and making ærial progress where ice prevents navi-

LETTER THAT SPEAKS FOR ITSELF!!

PLEASANT GAP, PA., Aug. 14, 1807.

MR. J. EDW. LAWRENCE,

Manager Union Mutual Life Insurance Co. Bellefonte, Pa. Dear Sir :-

I acknowledge the receipt this day of the Union Mutual Life Insurance Company of Portland, Maine, for two thousand dollars (\$2,000) in payment of the death claim of my brother's life, the late Dr. S. E. Noll. I wish to thank you for the prompt and business like manner that you and your company have shown in the settlement of this claim

My brother was insured in March, 1897, and died the following July, he had paid but \$48.16 for which I am this day handed \$2,000. Thanking you again for your kindness,

I am, sincerely yours,

WM. H. NOLL,

Administrator.
