Bellefonte, Pa., Oct. 8, 1897.

FARM NOTES.

Best Way to to Up the Fodder Crop.

The time for saving only the corn and making little or no account of the fodder has gone by.

It is calculated that the fodder from a crop of corn that has been cut up in sea-son at the roots and properly cured will equal in value for feeding purposes one-third of the entire crop. This being the case, there is a great loss in allowing so much feeding material to go to waste. It makes all the difference between profit

and loss in producing the crop. Properly prepared, this corn fodder makes a valuable food for milk cows, as good as the average quality of hay, and the amount realized per acre should be about the same. This is well worth saving, to say the least.

Now as to the best methods for preparing this fodder for stock. With the large growth of corn in the west and south there would undoubtedly be too much waste in feeding the stalks whole, and not much attention has yet been given to putting this kind of fodder in the silo.

On the average sized farm in the corn growing districts there is, or should be, some kind of power-horse or steam. Where this is the case the way is plain. Get a two or three horse-power shredder, with elevator if desired, and with this prepare the fodder for use.

If this, after the corn has been husked, has been properly put up and cared for the work of shredding can be done as wanted for use during the winter, or if it is dry enough to put in a mass, then a large amount can be prepared at once if desired. Expense to the State for Troops Estimated at \$125,-In cold weather we have found an advantage in preparing enough at one time to last several days, and when left in a pile it will warm up considerably, making it more palatable for stock.

Corn fodder that is shredded is put in the best condition for feeding. It is next to pulping. There are no sharp ends to \$10,000 was drawn shortly after the men make the months of cattle sore, as is otherwise sometimes the case. There need be that the total expenses will not be less no fear that stock will not relish fodder prepared in this way or that there will be draw pay at the same rate paid to the a loss in feeding. By this process all parts and privates range from \$3 to \$1.50 per of the stalks are pretty well mixed and the waste is imperceptible. Treated in this way, the large amount

of fodder in the great corn growing regions can be disposed of at good advantage and become a profitable source of income.

Shredded corn fodder can also be readily baled the same as hay and thus prepared for market, as I understand is beginning to be done.

On the average sized farm the owner should have some such arrangement as this for his own use. Not only can the stalks from which the corn has been removed be shredded, but what is termed "fodder corn"—that is, a crop raised especially for ble." fodder without the ears being husked out four, but they have no word to denote -can be prepared in the same way. This makes one of the best milk and butter producing foods that we have. Where very large tracts of corn are raised the combin-ed husker and shredder might be used to good advantage, but this article is intended more for the benefit of the smaller farmers who desire to do their own work and make the best possible use of their entire crop of corn.—E. R. Tovel in Massachusetts

-The advantages of fall plowing over the same operation in the spring are dwelt upon by Prof. H. Snyder, of the College of strongly to less demonstrative northerners.

Neal Dow the Great Temperance Advo cate is Dead. Professor N. C. Schaeffer, superintendent of public instruction, has issued a PORTLAND, Me., Oct., 2nd .- Neal Dow,

the veteran Prohibitionist, died at 3:30 circular calling for the observance of o'clock this afternoon. It was on the 20th of last March that the autumn Arbor day, on Friday, October

whole temperance world celebrated the "The benefits which result from Arbor | ninety-third birthday of General Neal Dow. day are easily shown. The observance of this day has led to the planting of millions of trees. It has made the rising generaof trees. It has made the rising genera-tion familiar with the uses and the charms a leader in temperance work. His first of our forests. It has drawn attention to movement in this direction was when he the value of trees for shade, for fruit and induced the town authorities of Portland, for the arts. Very many of the pupils of our public schools have learned how the ringing the old town bell at 11 and 4 reckless and wanton destruction of forests o'clock for the citizens to take a drink. may ruin and has ruined some of the rich-He has ever been the implacable foe of est countries on earth. They have learned drink, and though he naturally incurred that coal and water are the chief sources the enmity of all connected with the liquor drink, and though he naturally incurred of the mechanical power which lies at the traffic, honors have been bestowed thickly basis of our industrial prosperity. They on him.

In 1851 the Maine Legislature, after years of Dow's bombardment, passed the amous prohibition law.

The biography of Neal Dow deals with what may be large figures. At 60 years of age he raised the Thirteenth Maine, and led it to the front, was shot four times, and landed in Libby prison. At an age when most men are dead, he lectured all over the earth on temperance ; sixty-seven years ago he was married, and in 1880 he was the candidate for President on the Prohibition ticket.

There is but one other person in the United States who shared with him in the the Temperance army-Frances E. Willard the head of the white ribbon army. Long may she live to lead that noble band of consecrated women !

Mr. Dow was 35 years of age when he inaugurated the remarkable crusade in behalf of prohibition which continued for almost sixty years. He became convinced that the best remedy for intemperance was to be found in the outlawing of the traffic in intoxicants. He was right. The lapse of time has demonstrated that the one phase of temperance progress to which liquor dealers most strenuously object is prohibition. No advocate of restriction by prohibitory process has ever claimed that it will put an end to all drunkenness, or make it imposible for various men to coin

money out of the passions and appetites of their weak-minded neighbors. There is no law on the statue book which is not violated every day. It would be a singular thing if the prohibitory liquor law were the exception to the rule. It will always be a great honor to the memory of Neal Dow that he was the John-the-Baptist of prohibition.

He never lost his love for the cause of temperance. Almost up to the month of his death he was active, remarkably so for an old man. Yet he always had time for other things. During the war of the rebellion he was in the service of his country, demonstrating that he was quite as much interested in striking off the limbs of the black man the chains of physical bondage as he was in redeeming his fellow citizens of all colors and nationalities from vassalage to the alcohol habit. During the last few years he has been regarded by all good people with unmixed admiration, and he goes down to his grave followed by the love of millions of devoted friends. He was weary and God gave him rest.

to an old book, the air was popular long before the Revolution, being then called "Lydia Fisher." It was a favorite New England jig and it was customary to fit impromptu verses to the tune, such as "Lydia Locket lost her pocket, Lydia Fisher found it. Not a bit of money in it,

Only binding round it. The tune itself is said to have been sung

in Cromwell's time, when it was called "Nankee Doodle," and one of the verses "Nankee doodle came to town Upon a little pony, With a feather in his hat,

Upon a macaroni. This alluded to Cromwell's riding into

Oxford wearing a single plume in his hat fastened in a knot called a "Macaroni." Just before the Revolution the British

officers adapted the old song to new words intended to ridicule Yankee simplicity and manner. But the Yankees turned the tables by accepting "Yankee Doodle" as their national air and piping it whenever they repulsed the Redcoats. When the battles of Lexington and Concord began the war,

the English then advancing in triumph love and confidence of the rank and file in played along the road, "God Save the King," but when the Americans had made the retreat so disastrous to the invaders, these then struck up the scouted "Yankee Doodle," as to say, "See what we simple Jonathans can do !"

different physicians but with no relief, and also That the air was universally deemed a good retort on British royalists, is proven by the used many different proprietary medicines, spending almost fifty dollars for these medicines, fact that it was played by us at the battie of Lexington when repelling the foe; again, the middle of winter, and was left in a much at the surrender of Burgoyne, and, finally, at Yorktown surrender.

A Student's Adventure.

A young student at Andover relates a pleasant adventure. He was making a pencil drawing of an old house in the town, as he saw it through the leafless trees, when a lady came along the walk and paused behind him. "Ah ! you are sketching the Phelps house," she said. "I never knew any one to try that before." He inquired eagerly whether she were sure that it was the Phelps homestead. "I was not quite satisfied with my information," he added, "but that is why I am doing it." "I can satisfy you on that point," was the reply. "Why do you ask?" Whereupon Keep your blood pure with Hood's Sarsa-

lady smiled and made him a little bow. "I am much obliged to your mother," she said amusedly. "Will you tell her so from Elizabeth Phelps Ward?"-New York Times.

nothing but hope of electing their ticket this fall. Agriculture of the University of Minnesota.

"Fall plowing keeps the humus and nitrogen of the soil in better condition than late spring plowing. Nitrification goes on in the soil until quite late in the fall, and in the south the process goes on the entire year. The change is most rapid near the surface, where there is plenty of oxygen from the air. In early fall plowing the available nitrogen formed from the humus is near the surface, where it does the sprouting seeds and the young crops the most good. With late spring plowing, this available nitrogen is plowed under, and inert organic nitrogen is brought to the surface.

"In old soils the process of nitrification does not go on rapidly enough to furnish available nitrogen to the crop. In a new soil the process of nitrification is liable to go on too rapidly. Deep plowing and thorough cultivation aid in nitrification. Hence, the longer the soil is cultivated, the deeper and more thorough must be its preparation. Plowing must be done at the right time, preferably in the fall so as not to interfere with the next year's water supply. The application of lime and wood ashes aids in the reduction of nitrogen of humus to available forms. and prevents the formation of sour mold. Good drainage is also necessary to nitrification in the soil. In water-logged soils the humus does not decompose normally, but peat is produced on account of the absence of oxygen. We thus see that nitrification, although some-times a serious source of loss, may be largely controlled by careful management of the soil."

-For contagious diseases among all animals science will certainly find a cure. Dipping cures scab and Texas fever-that is to say, the germ killing dip in connection with disinfection and extreme cleanliness. Hog cholera is declared by some experts to be the result of filth-filth in feeding and in yarding and penning-as well as in the transportation of swine from one place to another. We wish the agricultural stations would experiment earnestly and carefully with reference to stamping out the swine plague. We believe it can be done either by dipping the hogs in a germ destroying solution or inoculating them with a prescab in sheep and Texas fever in cattle can cholera.

-There is no crop grown so easily and with so little cost as late-sown turnips in a field of well-cultivated corn. The shade of the corn will keep the turnips from growing much until the corn is cut. Possibly also their growth will be checked by the demand of the corn roots for plant food. But in the Indian summer that follows the first frost the turnips will make rapid growth, as they will then have all the land for their own use. The turnip will endure a pretty heavy frost, and grow again if warm weather follows it. But in our climate turnips cannot be left in the ground all winter as they are in England .- American Cultivator

Perhaps no southern custom is prettier than that of having the children of a household call a friend of the family or a favorite visitor aunt, uncle or cousin, as the case may be. Doubtless the custom had its origin in the numberless genuine relation-ships of southern life, which led people to feel that there was a certain coldness in addressing a guest by a formal title when everybody present was addressed familiarly affectionately.

Pedestrian Rights.

Those who ride in buggies, on bicycles or any vehicles should always remember

that in crossing a street or highway the person on foot has the right of way. The law says so, and if you injure a pedestrian by careless riding or driving you are responsible. No one is required to run across a street to keep out of the way of bicycles or vehicles. The riders are the ones to look out for a clear track.
