

Wireless Telegraphy on the Coast of

Labrador. An exceedingly interesting practical application of the Marconi system of wireless telegraphy will probably soon be made in one of the most inhospitable regions of the most interesting practical application of the Marconi system of wireless telegraphy will probably soon be made in one of the most inhospitable regions of the most interesting practical application of the Marconi system of wireless the wireless than the Marconi system of wireless the wireless that world, and if it shall prove successful—as there is every reason to hope and believe that it will—the great value of this novel prevented justice Smith from securing any method of bringing isolated people into immediate and constant communication with the world will have been fully established. Every year, early in the month of June, a great fleet of fishing smacks, schooners and small steamers sail out from the harbor of St. Johns, Newfoundland, distribute themselves all along the rock bound coast of Labrador, extending almost up to the Arctic circle, where they engage in fighting in the circle, where they engage in the circle and the circle a point their course toward the north and in fishing in the comparatively narrow portion of the Atlantic Ocean which separates Greenland from Labrador. Between ten and twelve thousand men leave their homes in Newton Mark and leave the leave th

than before. In order to avoid the risk of complete failure of the fishery it is customary for the boats to scatter all along the
Labrador coast for a distance of about six hundred miles. The vessels which happen to "fall in luck" sometimes load up to the water's edge in a few days and start for home, while the unlucky ones may remain out in the same water's load up to the water's edge in a few days and start for home, while the unlucky ones may remain out in the same water and the same water's load up to the water's edge in a few days and start for home, while the unlucky ones may remain out in the same water and the same water and the same water as a man who was treating her so cruelly.

Upon receipt of his daughter's letter Mr. Jones, in company with his wife's sister, Miss Lou Kinkead, at once started for particular to continue fiving with a man who was treating her so cruelly. and many poor fellows have starved to and aunt. by snow and ice in winter have proved prohibitory obstacles to the construction of troubled with. such a line. Now, however, the problem is in a fair way of being solved by Signor

At the invitation of the Newfoundland government. Signor Marconi's principal assistant recently visited St. Johns, the capital, carrying with him a complete outfit of the Marconi apparatus; and highly
successful public demonstrations were
successful public demonstrations were
State of Pennsylvania at the Exposition to
State of Pennsylvania at the Exposition to then given. This representative of the young Italian inventor stated that six stations could be established on six high compensation, and will be required to pay headlands jutting far out into the sea along the Labrador coast, at distance of 100 miles apart, and that these would practically cover the entire cost from the John R. Murphy, Allegheny county. near Hudson's Bay, northermos the termini of the existing land telegraph lines. At no time would a fishing boat be apt to venture more than fifty miles away from the nearest of these stations; and any vessel would thus be enabled to communicate with the coast, whence its message could be sent from station to station, and so on to St. Johns. Moreover, weather conditions would in no wise interfere with the system.

As soon as one boat should find luck (as the sailors express it) she could telegraph to the nearest station, and in a few hours all the vessels of the fleet would be on the spot, having been notified by signals from their nearest station. Whenever the catch should exceed the safe loading capacity of the boats word would be flashed to St. Johns, and more steamers would be dispatched forthwith to their assistance. In case of disaster the news would likewise be promptly forwarded; and it is interesting to know that a station will probably be established at Belle Isle, in the Strait of Belle Isle, where the terrible wreck of the Scotsman occurred recently

One of the most astonishing featues of the plan is the exceedingly low cost of the installation. We are informed on reliable authority that Signor Marconi has offered to equip the six stations with complete outfits for £120 each (less that \$600), and that one operator only would be needed at each station during the time when the fleet of fishing boats should be anchored on the fishing grounds. The ordinary Morse key and sounder would be used, and any ordinary telegraph operator could work the instruments more easily than on land lines, as the speed of sending and receiving messages is much less by the Marconi wireless system. The apparatus is supply is exhausted. One farmer, in 1893, com wireless system. The apparatus is light and easily portable. As no difficulty is apprehended in cummunicating between home, only to find that his home in Mount is apprehended in cummunicating between stations one hundred miles apart, and as it is said that by elevating the terminal wires (by means of kites or balloons) the merely by accident that the discovery was range might be greatly extended, we see made at Mount Pleasant. A traveler pass-no reason why the apparatus should not ing through Mount Pleasant spent the form an essential part of the future equipment of intrepid searchers after the North ment of intrepid searchers after the North of a stone which he had picked up to the strument on his ill-fated balloon voyage we might have known with certainty long been examining some days before. This ere this whether he actually reached the led to the analysis and to the knowledge goal or not.

Women More Charitable Than Men.

During the past eight years, out of the siderable extent until the spring of 1896, ten and a half millions of personalty over and did not prove profitable for a long time which 150 women in England have exer- after that. Every farmer for miles around cised testamentary powers, they have bequeathed no less than £2,696,000 for religther wagon-load, and, as it cost them nothper cent. Within the same period 318 that was offered them. The effect was to men, who left behind them £65,489,000 in depress the phosphate market the world cash, distributed only £7,423,000 in charity, over. or 114 per cent. of the total sum. Women are therefore, if judged by their wills, more than twice as charitable as men.

statement from her as to the shooting. The case is a particularly sad one in as much as Mrs. Harris was only 24 years of age and was beloved and esteemed by every

one who came in contact with her. Mrs. Harris, who was married about three years ago, had separated from her husband sometime in April and had reten and twelve thousand men leave their homes in Newfoundland each season at the time of this migration. The ships are largely owned and are all "fitted out" by merchants in Newfoundland; and from the time the vessels leave port, early in June, until their return, in October, the only means of communication is by a small steamer which is sent out at intervals to carry provisions to the crews and to bring home news of the progress of the catch.

It frequently happens that the chosen fishing grounds of many ships of the fleet are, for some inexplicable reason, avoided by the fish in one year, and the next season the finny tribe returns in larger schools than before. In order to avoid the risk of

out in the same waters, a few hundred Baltimore, arriving there Friday morning with those who might come to their rescue, | ing in the kitchen talking to her father
