

Bellefonte, Pa., Nov. 24, 1899.

FARM NOTES.

-A handful of sawdust, sprinkled with carbolic acid, and thrown into a nest box, will prevent vermin. If sawdust so treated is scattered in the stalls and on the floors of stables flies and insects of all kinds will be less troublesome. Crude petroleum will be found excellent as a liniment for sores

and will also keep vermin away. -Mange on swine is caused by filth and animals are thoroughly scrubbed on a warm day, using carbolic acid soap, then well rinsed, and when dry thoroughly anointed with a mixture of four parts lard and one part kerosene, two or three times, and given clean quarters, the mange will disap-

-Two years ago I found some black knot on a plum tree. To remove it by cutting off the limbs would greatly disfigure the off the limbs would greatly disfigure the trees. The idea occurred to me to cover it with a plastic salve that would prevent the spores being cast off and thus prevent any further increase. I mixed equal parts of kerosene, lard and resin, melted them togave another thorough application. In the spring the knots were scraped off easily. Now the bark is growing over the bare spots and will soon cover them. There is no grees were the special of the spring the skirt then bells to a wider flare and touches the ground evenly, trailing to about a four to six-inch length in the back. In some skirts there are many gores and there is also a tendency to adopt box plains and the skirt then bells to a wider flare and touches the ground evenly, trailing to about a four to six-inch length in the back. In some skirts there are many gores and there is also a tendency to adopt box plains and touches the ground evenly, trailing to about a four to six-inch length in the back. In some skirts there are many gores and there is also a tendency to adopt box plains. says a Rural New Yorker correspondent.

-The sowing of rape as a pasture for sheep and hogs seems likely to work a revparties seem to be much pleased with the results, and it seems to be as good as clover or alfalfa for pasturing, besides being more easily and quickly grown. The cost of the seed is small, being but about 10 cents a lb. at wholesale, and but 5½ lbs. are required at wholesale, and but 5½ lbs. are required to nervous terrors lest the imperfectly-clos-form all principal points on the Pennsylvanian parties seem to be much pleased with the ming, for the neat tailor finish of machine journ of two weeks in the "Flowery State." Tickets for the fourth tour will be good to return by regular trains until May 31st, 1900.

Tickets for the above tours will be sold from all principal points on the Pennsylvanian parties seem to be much pleased with the ming, for the neat tailor finish of machine journ of two weeks in the "Flowery State."

Tickets for the above tours will be sold from all principal points on the Pennsylvanian parties are required. for an acre. Not only will this food be valuable of itself, but, being a substitute for clover pasturage, it will cause more clover to be cut and cured for hay, which will interest the imperieurly closering placket of former seasons should gap and show a glimpse of the snowy cambric underwear worn beneath. We all rejoice in the side fastenings of the new skirt. crease the ability of many farms for dairy production and also for the raising of young stock. We believe clover or alfalfa, which is of the clover species, as green feed or as hay, is the best feed for those purposes, and in New England it is too valuable to be used as a pasture for hogs. Rape always has been found a cheap and desirable green food for fowls that are confined to yards.

many kinds of manual labor. Then the healthful condition under which his work the black cloth collar band, which is pierced is done out of doors in the pure air are with large holes to show the satin beneath largely in its favor. The farmer is never haunted with the fear of losing his place, and when hard times come he is not found walking the streets day after day vainly looking for work while the provisions in the larder run low and actual want stares his same time flatten the shoulder blades and family in the face. But the farm not only broaden the back: always furnishes work, but also an abundance of supplies of the very best kind, so that in the hardest times he lives on fresh eggs, yellow legged chickens, milk, butter and cream and choice meats and vegetables tion. Do this ten times. Put all the of his own production, and if out of debt strength you can in the movement when "hard times."

-Use land plaster and kainit freely with peat the exercise. the manure and there will be less escape of ammonia from the heap. Plaster absorbs gases and is of itself an excellent fertilizer.

Exercise 5—Lift the arms directly at the side on a level with the shoulders. Turn the palms of the hands upward. Bring the The same may be said of kainit, which con- arms up over the head, breathing slowly in tains both salt and potash, and, in addition to serving as a chemical agent, it remains the terms go up. Let them go back to the level of the shoulders and breathe out. in the heap as an ingredient in the plant Be careful not to turn the hands as they food of the manure. Used in the hills, in the spring, as a starter for corn, both plaster and kainit are excellent, but more so with manure. Lime, when added to the manure heap, causes the ammonia to escape as it creates heat and hastens decomposition, but such is not always the case, as the coarseness of the materials and the kind of absorbents used affects the loss of volatile matter. When manure is kept damp there will be less loss of ammonia because it is absorbed by cold water, and some farmers use small quantities of lime in order to have the manure decompose sooner than it side of the forward foot. Bend three times otherwise would when the materials are coarse. If the liquid manure is added to solids, however, there will be no difficulty arms. Bring the elbows up at the sides, in having the heap undergo decomposition, and it is then that plaster and kainit will prove of much benefit in avoiding loss of

apiarists who use beehouses exclusively, the majority do not. There are also many different kinds and varieties of houses used. A beehouse need not be an expensive one, and almostany kind of a house will answer the purpose. None is better than an old dwelling house, and two or more rooms are more convenient, providing they have an outside face of one end or side, or both. Perhaps a two room house with one partition is the best. Such a house with two ordinary sized rooms, say 11 feet square, will give 112 feet of outside surface, but take off 12 feet for doors, etc., and the 100 feet left will accommodate 50 colonies of bees by setting the hives two feet apart from centre to centre, which will give ample working room. The entrances are cut through to the outside and to correspond to the entrance to the hives. The hive may be set directly on the floor, but I would prefer them set on the usual bottom boards, nailed to cleats at each end, that would raise the hive some four inches from the floor, this for the purpose of chaff packing in winter. Bees thus kept in a house are very easily prepared for winter, and the extra protection thus afforded brings them through the winter in prime

-There are many advantages in keeping

bees in a house. While there are many

A very cheap beehouse and a very convenient one that I have used and which I make exclusively for bees is a small house 10 feet ruffle of knife plaited silk, running as high long, 6 feet wide and 6 feet high. This as the knee. Stitch down heavily on each ient one that I have used and which I make building accommodates 11 colonies, and the expense does not exceed \$1 per colony. Make them quite long and without stiffen-This is no more than chaff hives will cost for each colony outside. Floor space for the hives to rest on only is used, as a ground floor in the centre is preferred. The objection to a much longer house on the same plan is that it is not convenient to move, and also that bees become more or less confused where so many entrances are close together and all have the same appearance.

This has always been the objection to beehouses, but small buildings such as these, located around at different places, overcome

Pasty skins are improved by deep rich tones near the face. Mouse colored hair is rendered less nondescript by hats of the

FOR AND ABOUT WOMEN.

So many of the blouses of to-day are of the unlined blouse is too often spoiled because it is not drawn down in such a way that it keeps in place. A very simple contrivance to obviate this is a piece of belting, secured by a buckle in front, worn round the waist under the skirt band, and made as firm, and as tight as it is possible. made as firm and as tight as it is possible.

By means of this the blouse should be drawn into the exact shape required, and will remain so; it is better than any hooks

Wabsan, our own Ayris, and, last of all, Holden at Wooster.

The old fashioned college president was expected to be an all-around man. He must be a profound scholar, a clergyman,

unnatural conditions. It is due to a minute parasite, which burrows under the
skin. It cannot be easily cured, but if the tion to cut short the flowing and flaring skirt, bringing it to more gradual and less violent lines, there is little departure in outlines from the spring costumes.

Gowns will be severe, as far as cut is concerned. Many panels, tabliers, borders, zones and other effects will be introduced, cutting up the surface of these dresses and

make of skirts will be rather plain. The disposition is to narrow the skirt to a three-and-a-half-yard width, smoothly drooping from the waist over the hips clinging to close lines to the knee.

Now the bark is growing over the bare spots and will soon cover them. There is no guesswork about this. It does the work, says a Rural New Yorker correspondent. a more graceful movement.

The tailor-made girl flies down street of far as we have seen reports of its use, all and black Scottish tartan. It has no trim-

A visiting costume made up for the mother of a debutante is of black satin, cut strictly tailor made, and, wonderful to relate, trimmed heavily with strips of black broadcloth! We are all familiar with cloth grows trimmed with satin, but this new toilet is very smart, indeed. The sleeves od for fowls that are confined to yards.

The popular idea that a farmer works of cloth folds laid horizontally on the satin harder than men in other industrial callings is not true as applied to the work of the year, writes Waldo F. Brown in The National Stockman. To be sure, he has come days of head work but not consist his some days of hard work, but not one in this | An overdress is simulated by bias cut bands day of improved machinery to where there were ten in the old days of hand labor, and there. A beautiful set of topaz ornathe winter is a season of rest to him, and ments are spread up and down the shirt the great variety in his work relieves it of front, beneath the jacket, which is of that wearisomeness which accompanies so creamy lace worn over primrose yellow sat-

> An author says: "Of all the beautiful objects of nature none surpasses the well-rounded neck of woman." Here are a few Here are a few exercises to fill out the chest and at the

Exercise 4-Bring the arms out as in swimming, forward and out straight at the sides. Keeping the elbows on a level with he hardly knows the meaning of the term the arms are thrown backward. Then change position to the other foot and re-

come down. Repeat this exercise 10 times The next exercise is an exercise which will make the muscles around the wais more compact, thus making a smaller waist. This exercise is very good in all cases of indigestion, as it has direct effect upon the liver and intestines:

Exercise 6-Lift the arms directly at the sides and bend to the left. Take care not to move the arms, but simply bend at the waist line. Change to the right foot and bend to the right. Always bend to the to each side.

Exercise 7--This next exercise is for the hands closed and resting on the shoulders. Fling the arms out at the side ten times, opening the fingers as the arms go out. The same exercise, throwing the arms upward, ten times. Also forward ten times. The best exercise for developing the arms is hanging on a bar and drawing the body up on bent arms. Club swinging is splendid for rounding out the arms. All these exercises if done each day will make the figure well rounded, as well as giving a graceful carriage. But one must be faithful in taking them and exercise every day in a cool room and dressed loosely.

Many small buttons will be utilized as trimmings, especially on waists, inside vests and upon the plainer and smoother cloths. Braidings in military effect made of the finest mohair are apt to be the most prominent finishes for tailor made garments.

For making a cashmere waist put the back in with broad box plaits and the front with three narrow ones, between which are groups of five tucks. Wear high stock collars of Liberty satin to match the cashmere Have the sleeves long and edged with many rows of stitching. Put a group of five tucks around the arm, just below the shoulder. Stitch all the box plaits down with white silk thread

Black silk skirts should be cut by a three gored pattern, with a box plait down the middle of the back as far as the knees. Un-

No woman whose complexion is poor should wear black near the face. Some color is imperative. The brunette should choose red, yellow or deep cream. The blonde, golden brown, navy or clear blues
