tached instantly.

The height from the floor at which nests should be placed must be determined in part by the size of the breed, as Brahams and Cochins need lower nests than Leg-horns and other lighter breeds. But this should be borne in mind that

the nest should be as high as possible, to make a visit to it on the part of fowls, except for business purposes not at all likely. If conveniently low a hen will jump up into a nest and begin to scratch in the hay can be ground in the litter on the floor. In as she would in the litter on the floor. In this way eggs are often broken, and the egg eating habit acquired.

—Clover seems to be the plant that poultry delight most to indulge in. It contains elements for the growth of bone, feathers and muscle in young stock, and production of eggs with hens. It is excellent for hers during malting making them lent for hens during molting, making them more able to stand the strain on their sys tem. Care and attentiou should be given to the curing of clover; to much exposure to the sun should be avoided. The object in view is to keep the green leaf in its natural state as long as possible. Clover or clover rowen should be cut when just beginning to bloom, or just before this time, when there is a profusion of tender green leaves. In curing the clover, I would put it up in piles of good sized bunches, and allow it to go through a curing or sweating process, opening it a little each day, and turning the whole pile completely over, so as to dry the bottom, which gathers moisture from the ground. I would cover at night and during a rainstorm. Clover that is cured in the shade will best retain its flavor. It may require several days or a week to put it in condition to go to the barn; this depends much on the weather.

-The question of the best manner of the storage of the apple crop will soon be up for consideration. The department of agriculture has been collecting some informa-tion upon this subject and concludes that a vast quantity of apples spoil every year simply through carelessness or improper storage.

The storing of fruit under dwelling houses is not recommended. A certain amount of decay is inevitable and the rot-ting truit becomes a propagating place for disease germs which permeate the rooms above.

A pit or eave, if properly constructed, will keep apples very satisfactorily and has the advantage of being the least costly of any possible storage construction. Such a cave, as described by the department, is usually built into a hillside sloping toward the north, so that the entrance is protected from the southwest winds that prevail during the summer and autumn. In moist soils the cave must be walled, in dry soils soils the cave must be walled, in dry soils no walls are required. Upright posts along the sides support the top, which is made of poles; over the poles is a layer of coarse hay, and over the hay, soil to the depth of two feet. Several flues are made for ventilation. Such a cave may be built for ventilation. Such a cave may be built she does all her own sewing; she and her hilden we always exquisitely dressed, and solve the last time."

I ever saw," said the speaker. "Why, she does every bit of her own work, and her hour and at its conclusion the holy father blessed me and those whom I might bless on my return. As he left the audience chamber I felt that I had seen the pope for the last time." soils the cave must be walled, in dry soils planned with doors in each end and large enough for a wagon through them. The best system of ventilation and the most even and desirable temperature can be maintained by use of an underground ventilation pipe leading from an opening in the floor of the cave to similar openings on the surface of the ground several rods away. The pipe should be large enough to provide sufficient air for the cave, and should have valves at each opening to regshould have valves at each opening to reg-ulate the supply. The air in passing through the pipe is cooled in summer and warmed in winter, and thus brought to near the proper temperature for good results in keeping fruit. To complete the system several flues should reach through the top of the cave to the open air above. The sum of the capacities of these flues should at least be equal to the capacity of the ventilator leading into the cave.

I will never believe that the demand for immense weights required by the standard and turkey raisers is wise. I have lost the heaviest turkeys lever owned simply from being overfat, and I do not feed very much for flesh either. It is not not unusual for me to lose sales because I cannot quote as heavy weights as are demanded, yet I have as large turkeys as any fancier. I sold a lady a young tom last spring which weighed without being fattened 32 pounds. A few days ago she wrote asking if I did not send her an old tom, not in the spirit of complaint, but the tom is so large that she thinks he must be 2 years instead of one year old. I know overfat stock is not good for breeding purposes, and so does every one who has given the subject any careful attention, yet a turkey must weigh so many pounds regardless of consequences. If the would be some reason in the demands, but I have often received inquiries in November for young toms weighing 30 pounds or over. Now, everybody with common sense knows or should be taught that in this climate it is almost impossible to make a young tom weigh 30 pounds in November or even December, and that to do so is an injury to March young toms may weigh from 28 to 32 pounds without any special effort affattening them. I prefer a pullet from 16 to 18 pounds rather than one heavier. The overlarge hen does not lay so many eggs, nor are those she does lay so fertile.

This year one of my turkeys laid over 70 eggs. I have forgotten the exact number but there can be no mistake about it, as I put her or the farm with auother pullet. The other died and this one laid over 70 eggs. Of course she was not allowed to sit. She weighed 15 pounds in February and now she is one of the largest hems I have for immense weights required by the standard and turkey raisers is wise. I

eggs. Of course she was not allowed to sit. She weighed 15 pounds in February and now she is one of the largest hens I have ever owned weighing 24 to 25 pounds. I common for years, such as maize, tomato did not keep her for her size, but for her pink and sea green. blood and made a special mating with a tom from my first prize birds, thinking the young would get size from the parental side, but the mother has eclipsed all expec-tation, though they do often fall short of it. I can generally tell how a tom will develop, but sometimes the largest pullets do not make the largest hens.

Result-A Wedding.

He-What do you think is the most appropriate name for a girl?

She—That depends upon the girl. Your name would suit me all right.

French models show much fuller skirts Many of them being mounted in small loose pleats at the back, the full part extending half around the waist.

Muffs imported from Paris agree with

Gold braid is not as much used on any thing as bullion thread. This is very narrow, comes on great spools and is slip-stitched on the edge of fabrics.

Flowers are more fashionable for trimming hats this winter than feathers.

When staying with friends, take care not to let your entertainers become weary of your society. Absent yourself from them every day for a time, either retiring to your own room, imagining an errand if you have it or not, or in some way or other taking yourself off, so that the family may have the refreshment of solitude and leisure for their particular work. Above all, don't let your face wear a "What next?" expression, as if you were constantly expecting to be entertained in some way or another. A hostess should not be expected to cater for the whole of the amusement and occupation of the guest, who ought to have resources enough in herself to be able to adapt herself to the life of the household. to cater for the whole of the amusement and occupation of the guest, who ought to have resources enough in herself to be able to adapt herself to the life of the household without being bored or finding the time hang heavily.

The culture and training of the voice is one of the best means of promoting the general health. This is due mainly to the formation of correct habits of breathing. One cannot sing or speak well without understanding the action of the lungs. These have been likened, in their importance and use to the vocal cords, to the bellows of the organ. The lungs are never emptied of air in breathing. In ordinary breathing very little of the air which fills them is displaced, in forced expiration, such as accompanies singing, the old "residual air," as it is called, is forced out, and replaced by fresh air. This in turn stimulates the circulation, and thus the whole processes of the body are helped and vital-

The greatest injury is done to the deli-cate mechanism of the larynx by frequent colds. The vocal cords are thickened and inflamed, and sometimes injured beyond repair by these repeated inflammations, many of which occur in childhood. One should not be overwhimsical about draughts, but it is true that they are injurious to the vocal cords. The latter are draughts, but it is true that they are injurious to the vocal cords. The latter are also very susceptible to the evil influences of irritating conditions. Air laden with impurities, such as smoke or dust, passing through the narrow passage formed by the vocal cords, leaves its deleterious impress upon them.

"She is just the most wonderful woman I ever saw," said the speaker. "Why, she does every bit of her own work, and her" "Yes, the end is very near. The holy father's health was very poor when I saw him a few weeks ago. He received me as usual and questioned me concerning my mission, in which he seemed to take a great interest, but I could not help observing that a great change had taken place since last I saw him.

"He appeared thin and emaciated and his voice had a hollow ring. He was very feeble—so feeble in fact that he could not move without assistance. The audience

children are always exquisitely dressed, and there isn't a more stylish-looking woman on the street than she is. It's a standing wonder to me how she does it all."

A wonderful woman?
Yes, indeed. And there are so many of these women nowadays that they are fast ceasing to be wonderful. You find them he stored the ground several rods away. The pipe should be large enough o provide sufficient air for the cave, and hould have valves at each opening to regulate the supply. The air in passing hrough the pipe is cooled in summer and warmed in winter, and thus brought to lear the proper temperature for good results in keeping fruit. To complete the system several flues should reach through the top of the cave to the open air above. The sum of the capacities of these flues should at least be equal to the capacity of the ventilator leading into the cave.

noons, so it behooves the woman without much money to follow the lead of the great dressmakers and get afternoon and evening gowns in colors that have not been

pink and sea green.

Each of these colors is trimmed only in white, touched off by gold or silver.

There is no use standing out against the metal trimmings. You must have them to be in the fashion. You will stand back and say that you are afraid to use them because they will soon be too common or simply denying yourself a very pretty and becoming touch on your gown, while the rest of the world is indulging in it.

Will Aid in Settling an Estate. Officers of the Law Search the Residence of John Cochran, Who Died

White mohair is one of the favorite stuffs of the fall for indoor wear both for waists and whole gowns.

An unusal money find, that will tend to expedite the settlement of an estate, was made at Huntingdon Saturday afternoon. John Cochran, quite an old citizen, died in an unpretentious home on Cherry alley in that place in October, 1899. Letters of administration were granted to John G. Simpson and since that time an effort has been made to settle the estate. The dead Muffs imported from Paris agree with ours in being enormously large, but are canoe shaped instead of being the large daughters to his first wife. It was the

deceased husband.

Robert Cochran, a son of the decedent, shared in the belief that his father always kept considerable money about home, and as a legal heir he concurred in the opinion of the administrator that an effort should

liar looking bundle at the bottom of a half bushel measure. A careful inspection revealed the presence of eighteen neatly tied packages of greenbacks and a \$5 bill. A count of the greenbacks revealed the startling information that their money value agregated \$1,805. Then came word from the officers on the second floor that they had unearthed \$30 in gold and a small amount of change in an old chest. With amount of change in an old chest. With these discoveries the search was ended and

the money given to the administrator.

In the final distribution of the funds up wards of \$800 will be returned to the wid-ow as her legal proportion. It is fortunate for her that the robbers who have been operating with a high hand in that town for a couple of weeks past had no knowledge of the valuable contents of her humble

The Health of the Pope.

The Rev. Father Lacombe, who returned from Rome a short time ago, was in Montreal recently on his way to his mission field in the Canadian northwest. When told by a reporter that alarming news had been received from Rome regarding the pope's condition, Father Lacombe said: "Yes, the end is very near. The holy

Read Your Home Paper

The local paper should be found in every home. No children should grow up ignorant who can be taught to appreciate the home paper. It is said to be the stepping stone of intelligence in all those matters not to be learned in books. Give your children a foreign paper which contains not one word about any person, place or thing, which they ever saw or perhaps ever heard of, and how could you expect them to be in-terested? But let them have the home paper and read of people whom they meet and of places with which they are familiar, and soon an interest is awakened which in-creases with every arrival of the local paper. Thus a habit of reading is formed and those children will read the papers all their lives and become intelligent men and women, a credit to their ancestors, strong in the knowledge of the world as it is to-day.

The Average Girl.

The average girl in the course of time marries, says a thoughtful writer. And she doesn't marry a millionaire; she marries a man who goes out six days in a week digging for his six dollars. It is the wife's part of the partnership to save it for him. But if she doesn't know housekeeping further than bakers' bread and fried beeffurther than bakers' bread and fried beef-steak, the chances are the family will al-ways be poor, that the man will quit shav-ing more than once a week and the girl will slomick around in a wrapper, and the dirty-faced kids will go ragged and sick; that the doctor will take all the money the grocer leaves. And that the love dream will soon be over and the day! will be git will soon be over and the devil will be sitting beside the 98-cent alarm clock holding his sides and laughing at what a pudding he has got.

Three Pairs of Twins in 4 Years.

Falls Creek has a happy father who has broken all previous records, so far as the knowledge of the *Herald* goes. T. C. Russell, an employee of the tannery at that place, is the name of the person referred to and be is the father of three pairs of twins, and he is the father of three pairs of twite, all of which have come along since 1896. In 1896, Mr. Russell became the father of a pair of boys and he was very much elated over the fact. In 1898 twins came again to grace his household and this time it was a boy and a girl, and to make the matter complete the other day his wife again preand great-grandchildren.

ONE COLD AFTER ANOTHER!

WHAT DOES IT MEAN?

CATARRH. PURE AND SIMPLE

CONSUMPTION BEGINS WITH LUNG WEAK-NESS.

There is Death in the Air for Those with Weak Lungs who Brave the Dangers of Cold Weather.

Weak Lungs Made Strong and Proof Against Danger by the New Scientific Treatment For Coughs, Ca-tarrh, Consumption and Diseases of the Respiratory Organs.

THE COOL WEATHER Has brought its usual crop of catarrh, grippe coughs, sore throats, etc., etc. It means death to thousands. to thousands.

For those disorders are but forerunners of death-dealing consumption.

Dr. STITLES' new treatment for this terrible disease is a life-boat of hope for those in despair.

It is a new, scientific system of medicine, the result of modern medical discoveries—a positive and absolute annihilator of the deadly disease germ:
It has cured dangerous Throat and Lung Troubles, which the sufferers thought were proof against medicine.
It is the cold weather antidote. What it has done is a proof of what it will do-for you—if you'll let it.

Effective, easy and pleasant to take.

Modern science reduced to a nutshell.

The problem of disease prevention solved.
CATARRH of the Head, Nose and Throat absolutely cured and the poisons of the disease completely eliminated from the system by treatment administered by DR. STITES. No injurious medication, NO PAINFUL OPERATIVE Treatment, no acid sprays, no caustic burnings, no experimenting.

Deafness, all forms of Catarth, Asthma, etc., successfully treated. The New system has brought health to thousands who were weak, sickly, pale, thin, and, therefore, open to consumption infection, if not infected.

DR. J. K. STITES,

EAR, NOSE, THROAT AND LUNG SCIENTIST

Offices, No. 21 North Allegheny street, Bellefonte, Pa.

the same same same A Well Known Young Man of Bellefonte Speaks in Glowing Terms of Dr. Stites' New Treatment.

New Treatment.

The New Treatment given by Dr. Stites, No. 21, North Allegheny street, truly deserves its name for I have never seen or heard of anything like it. It is not only new, but it is the true and sure treatment for all catarrhalfdisease. For sometime I had been among the list of sufferers of this direful disease. Was troubled greatly with coughing and spitting, dropping of mueus in the throat and was getting quite deaf. This alarmed me very much, also the fact that I began losing my sense of smell. In my case Dr. Stites has proved the full merit of his Great and New Treatment, for to-day I hear as well as I would ever wish to hear. My head is clearing nicely, my sense of smell returning, and in fact I am first rate all around, and express my gratitude to the IDr. in the foregoing lines, and wishing all sufferers to at least investigate the value of this great discovery before giving themselves up as incurable.

Respectfully,
Bellefonte, ----
