## FARM NOTES.

-Cleanliness, care and common sense are absolutely necessary at every point of management with poultry.

-When it is not convenient to apply solution of concentrated lye on trees dust them well with fine wood ashes when the dew is on the branches.

-Wheat bran is valuable not alone for its nutrition. It is an excellent alternative for stock fed on meadow hay. For milch cows it should be made into a mash.

--For cholera in chickens add a tea spoonful of liquid carbolic acid to a pint and a half of water. Mix the soft food with this and allow the fowls no other wa-

-A farmer who kept 40 head of cattle and 40 horses used well cured corn fodder chaffed and fed with grain ground and mixed with it and claimed it was worth as much as the corn itself.

—Is your cellar properly ventilated? Most cellars are damp and the air impure and are not healthy. The family lives over the cellar usually and should not be required to breathe impurities.

-There are two diseases termed hog cholera, one affecting the howels (the true cholera) and the other which attacks the lungs and known as swine plague. An animal may also have both diseases at the same time, but such cases are rare.

-Nearly all experienced growers of potatoes now favor level culture for the crop, especially if the season is dry. Level culture permits of better opportunity for destroying weeds, as well as providing a loose top soil as an effective mulch, which assists the soil in retaining and providing mois-

-Wire-worms are known to cause much damage in cucumber and melon patches.
It is claimed that if potatoes are buried about one foot apart and six inches deep around the vines the worms will leave the caught and destroyed with but little labor.

-As a remedy against cabbage worms mix a tablespoonful of red pepper, one of black pepper and one of ground yellow mustard with a pound of wheat flour. Once a week dust each cabbage with the prepared flour while the plants are moist with dew. A pound of flour will answer for dusting about 200 plants.

-The best cow for each one of us is the cow we like best to handle and be around. There is such a thing as incompatibility of temper between the man and his cow oftentimes, and this fact often marks the line the ground. between success and failure. The man who loves his cows and cares for them as a man will who has this affection for his stock will most assuredly receive better returns for his labor than the one who simply tolerates his dairy .- Dairy and Creamery.

-Various remedies are required to keep insects from garden vegetables. Spray the tomatoes, potatoes and egg plants with Paris green, a teaspoonful in a gallon of water. Scatter tobacco refuse around the cucumber vines. Dust cabbages with flour, to which a little red pepper and black pepper are added. Repeat as often as necessary. Paris green will destroy all biting. insects. The best fertilizer to use is proba bly acid phosphate, as your garden is probably well supplied with other plant foods, judging from the early growth of the crops.

-Potash is the fertilizing element oftenest needed in an orchard. The roots of fruit trees in most cases find all the nitrogen needed for growth and enough of phosphoric acid to perfect the seed. With the exception of nuts, the seeds is not an object to be fertilized for, but the flavor and color of the pulp, and there is where potash gets in its work. Kainit or muriate of potash -500 to 700 pounds of the former or 250 pounds of the latter per acre—will nearly always prove beneficial even when repeat-ed every year. Wood ashes can always be used to good advantage in large quantities. We have never known too much wood ashes applied to an orehard.

—Setting a Hen.—I begin with a box, putting earth into it, then straw, then a handful of wood asbes scattered over all. I try the hen a day or two on the nest egg, and if she means business I take that away and give her a full setting. If the eggs have been traveling, let them stand in a safe warm place for twenty-four hours to put the germs in right position when set. If you give them to the hen just after the journey, you will probably have spoiled eggs instead of chicks. Sprinkle the eggs two or three times a week to give them

bias band of the crash, two inches wide, piped with white butcher's linen.

The back is put into six inverted pleats. two or three times a week to give them necessary moisture. Feed the hen every day, and see that she returns to her nest and is not disturbed.—Mrs. E. Schoenborn.

various sections just now as a good money orop. Onions, it is hardly necessary to state, may be grown from seeds or sets.

Bailey has described up to date onion culton the edges and are piped with white are in brief as follows:

If seeds are used, they may be sown in the open ground where the bulbs are to mature, or they may be sown in green-houses or hotbeds and the young plants transplanted to the rows in the open ground. In sowing out of doors seeds should be put in as early as possible in shallow drills three to three and a half feet apart and covered with a half inch of fine moist earth. They need to be very care-fully weeded at first, but if the ground is clean and mellow and the rows straight the wheel hoe will be able to take full charge of the work early in the season. It has been repeatedly shown that cheaper, better and earlier onions can be grown by trans-planting the plants from greenhouses or planting the plants from greenhouses or hotbeds, where the seeds are sown very early. When the plantlets are as large as a lead pencil, they are set four inches apart in rows three feet asunder, and cultivation in rows three feet asunder, and cultivation in the hond of real blue lines helding eight. is immediately begun with the wheel hoe. In growing from sets the planting is made in much the same way. Multiplier or potato onions are similarly managed. Prize Taker is probably the most popular | der the point of ruffle. variety of the present day.

-Prussia is becoming notorious for extraordinary murders. A man named Beck at Konigsburg killed his wife, put the body in a box and kept it by him for eighteen months without being detected. His wife's absence was concealed by his mistress' going to Danzig and beginning divorce proceedings against him in the name of the

FOR AND ABOUT WOMEN.

One can but smile to hear a fair one ask for what wear a pongee dress is suitable. Naturally, it all depends. If the dress is made into a practical little blouse or shirtwaist suit, with stitching or a piping at the most by way of trimming, it is suitable for marketing, shopping or any ordinary morning wear. Enriched with a wealth of lace appliques, elaborated by accordeon pleat-ing, and perhaps a touch of velvet, it is in the costume class, and is suitable for great occasions.

Perhaps there is no greater source of friction in a household with servants than the habit of allowing the children of the family to be impertinent and tyrannical. This should never be permitted. Nothing is more ill-bred and more disastrous to b th. Servants must do a great deal of extra work where there are children in the house. It is impossible to arrange matters so that this will not be true, and the least that can be done is to have the children courteous in manner and speech. If children see their parents polite it will be second nature for them to be polite also, and their rare lapses will be forgiven quickly. Everyone agrees that servants should not be permitted to punish children or be unkind to them, but children should not be permitted to torment a servant, and parents who excuse it are responsible for their own

Never put clothes away unbrushed, nor forget to put the trees in boots and shoes when taken off, to pull and straighten out gloves, to roll up veils carefully, and never to sit about in a walking dress in-doors, are golden rules to remember for the preservation of clothes, while half the battle lies in the manner of putting them on. The study of the lines of the figure, the right adjustment of the belt, and the dainty finish of the neckband, the pose of the head and carriage and walk, are all as if written in an unknown tongue to the average woman, and therein, far more than in the actual clothes, lie the secrets of good dressing, as accessible to the poor as to the rich woman.

A Gibson shirtwaist is one necessary if

you would be quite up to date.

The special outline which stamps the waist with this name is the broad, rather square, shoulder effect made by one, two or three pleats turning toward the shoulder, melons or cucumbers and feed upon the potatoes. In this way the worms may be caught and destroyed with but little labor.

son waist idea has blossomed out in various ways, in one of which it forms part of cloth and linen costumes, the skirts being made in some simple style, tucked and trimmed with bands and short enough just to clear

The Gibson blouse coat is another form. made just like the shirtwaist, except that it has no collar and is cut down in an open V at the neck to show the blouse underneath. A stitched band fitting around the neck and down to the waist line is the

For the transparent shirtwaist, it is a good idea to have a low-cut short sleeve wash silk under bodice, which, if you are stout, may be bowed a little at the sides and back to give a trim effect. Or the lining may be high-necked.

Collars are made of the material of the suit. They are all worn with turnover, embroidered in white or brilliant colors. Nothing is finished off at the neckband, so that the buyer may use discretion about

Women are tired of matching all kinds of stocks to blouses. They want something ready at hand. Belts are made in so many ways that

they could take up a whole letter. The simplest ones are of stitched bands to match the fabric. A new idea for wear with all light gowns

is to have unlined, unbound belts of butcher's linen, cut on the bias, very wide, and pulled through a pearl buckle at the back or front. These are put in the wash like handkerchiefs and are all the better for a quantity of starch.

Everything is in suits. Nothing in separate blouses except ecru and white.

The most serviceable gown brought out by the houses here is the real linen crash string color. Not the inexpensive crash that shrinks if you look at it and that changes color when you wash it.

But the genuine stuff used raw from the looms in its natural weave and color, with a great many rough places over the surface. The best model in this has a seven-gored skirt, fastened down front at side under a

There are two bias bands around foot, piped with white, that are cut into points on each side of the band that runs from the waist. The blouse is put into box pleats down The onion is having a sort of boom in arious sections just now as a good money rop. Onions, it is hardly necessary to of a V-shaped vest of white butcher's linen.

> on the edges and are piped with white The collar is of the crash, piped with white, and finished with turnover of white linen, embroidered in scarlet and black. The helt is of white linen, run through a

pearl buckle. The sleeves are finished with stitched

wristbands of linen, piped with white. Percale will have quite a run as a fabric this season. In the good quality it washes

very well and the ironing gives a shiny surface to it which is very pretty. Some fetching tub gowns are made of it in the pin dot designs. Red or pale blue or black on a white surface are charming. One design that was simple and effective inch band of pale blue linen, holding eight rows of white stitching.

It was lapped over with a deep point in the center of front and back, in a line un-

The blouse was put into tiny box pleats at the shoulder, front and back. It was slightly double-breasted, finished with three-inch band of pale blue linen holding eight rows of stitching. On the inside of this band was a row of fine, round pearl buttons. The collar was of blue, stitched with white and lapped over to a deep point in the back, fastened with white silk loops and pearl buttons. The sleeves had stitchmurdered woman. The body was discovered through the curiosity of his former landlord, with whom he left a box on movinto a two-inch band of blue linen, heavily into a two-inch band of blue linen, heavily and Lung diseases. Guaranteed bottles

Wood Pulp.

How Trees Are Changed Into Paper. A Big Adiron-

Let us consider how newspaper is made in one of the big mills of the Adirondack mountains, where the giant machines, rattling on, day after day, never stopping, are scarcely able to supply the demand of a single New York newspaper. The timber which is felled in the forests of the North in winter, is floated to the mill in the mountain streams by the spring freshets and piled up in great heaps about the mill buildings, whose many roofs, chimneys and towers form a strange picture in the wilderness against the background of cloudtopped

By being fed to the shrieking saws the spruce logs are cut into pieces that are no longer than a man's arm. "Barking" machines, which have dikes of rapidly whirling radial knives, attack the wood and tear off the bark. To prevent a waste of any part of the timber an endless chain conveyor carries the bark to the boiler room where it is fed to the fires. Another conveyor, like the trottoir roulant at Paris, carries the clean logs to the grinding room, where a long line of three horned monsters

is waiting for them.

Flumes, besides which men are mere pigmies, bring the mountain torrents rushing down to the grinding room, feeding the energy of forest cataracts to the great turbines. They have an enormous work to do. Within the iron cases of the threehorned monsters are grindstones of a special hardness, turned by the turbines. The "horns" are bydraulic presses, which force the logs under them against the stones. Thus the wood is ground to pulp, the stones eating away three feet of wood an hour. The engineer tells us that more than 10,000 horsepower of energy is needed to convert one cord of spruce into pulp, and that the mills use more power than a whole manufacturing city in New England. Cold water flows continuously on the grindstones to prevent the friction setting fire to the wood, and the mixture of the ground wood and water, which flows away from the grinders, as a pinkish, gruel-live fluid, runs over dams and through screens and drying-machines, until a thick mass, it is either put in storage tanks, in bulk, or formed by machinery into thick sheets that can be rolled up like blankets. It is then ground wood pulp, ready for the paper ma-

chines. The sulphite pulp is prepared in a different way. The logs, when they come from the barking machines, are cut up lengthall winter, but now the narrow box pleat with handsome studs is used, and also a band of embroidery. The converging line of the pleats is a becoming one, and redeems the waist from what might be otherwise a rather masculine effect. This Gibson waist idea has her away to be screened and then hand picked -to sort out dust and dirt-and then are carried to storage bins above the great sul-phite "digesters"—monster steel cylinders, with conical ends, standing upright in a row.-From Success.

\$20,000 for Child's Injuries.

After being out less than an hour the ury in the United States circuit court in New York on Wednesday gave a verdict of \$20,000 to the mother of Easton E. Devore againt the Delaware, Lackawanna and Western railway for injuries to her child received 10 years ago, when he was a year and four months old. A verdict or \$10,-000 was some time ago overturned by the the court of appeals on a technicality. Easton E. Devore, while driving with his wife and child, was killed at Hope Crossing, N. J., in Nov. 1892. At the time of the accident there was such a sleet storm that Mr. Devore was unable to see or hear the train. The carriage in which he rode was struck by the locomotive. The father was killed outright, Mrs. Devore was severely injured, and the infant son was terribly crushed. The child recovered but

now at 11 years of age, he has the mind of an infant. The child was in court and his injuries were exhibited to the jury. It required four days to present the testimony. The verdict was reached on the first ballot.

he has never had the use of his limbs, and

Mrs. Devore's counsel, William D. Tyn dall and Walter K. Barton, have two more suits pending for her in Sullivan county. Both will be tried this month. One is for the loss of her husband, the other for injuries received by herself in the same accident that resulted so disastrously for her infant son.

To Pay 157 Roses for Back Rent. On Sunday, June 8th, the Tulpehoken Reformed church, frequently called Lein-bach's, situated a short distance from Stouchsburg, will pay 157 red roses as 157 years' rent to the descendants of Casper Wistar, who, a century and a half ago, was a brass button manufacturer of Philadel-

By a deed dated December 10th, 1745, Wistar conveyed a tract of 100 acres of land to the trustees of the church, upon condition that they "are to have and to hold the property under the propertionable part of the proprietary ground rent accruing, to be one red rose annually." There is no record that the rent was ever paid, and recently it was decided to pay the rent

Descendants of Casper Wistar, from Phila-delphia, will attend the services and receive the roses.

-Governor Stone and other sportsmen have organized "The Four Mile Run Fishing and Hunting Club" and have obtained possession of Four Mile run, a tributary of Pine creek, below Ansonia, Tioga county. Several dams will be built in the stream, which will be properly screened, and 25,000 trout planted there this year-5,000 large ones and 20,000 fry from the Penn Forest Brook Trout company, of Mauch Chunk, Pa. The club has also leased "Wetumpka" the Niles cottage, which will be transformed into a club

-Mrs. H. B. Kleckner, of Loganton, was stricken with apoplexy Friday evening, and has been lying in an unconscious condition since. The physician has little hope for her recovery. Mrs. Kleckner is a sister of county commissioner Boone, of Lock Haven.

REVEALS A GREAT SECRET .- It is often asked how such startling cures, that puzzle the best physicians, are effected by Dr. King's New Discovery for Consumption. Here's the secret. It cuts out the phlegm and germ-infected mucus, and lets the life giving oxygen enrich and vitalize the blood. It heals the inflamed, cough-worn throat and lungs. Haid colds and stubborn coughs ing from his apartments. When he found the police were after him Beck shot himThe belt was of blue linen run through a Green's Plant Bottles free at

Buy Your Harness at Home.

Buy at home; save money and see what ou are getting. Don't buy a cat in a bag nor from pictures; come and see the goods.

Low prices on reliable Harness.

We fit the harness to the horse.

The habit of sending away for your haress wants is not justified, either in the advantage of prices or better quality. All we ask is that you compare our goods at the same prices, and let the man with the pest goods and prices get your orders. We do not expect that you patronize us because we are neighbors and friends, but we would be glad to have you at least call in and give us a fair opportunity to convince you that it is to your best interest to give us your harness business. We want your harness business, and if we can sell you better harness for less money we think we ought

to have it. We are here to do business and, as we buy for cash, we can supply your harness wants for less money then any other con-cern in the county—big or small. Come in and let us figure with you on your

Its not assuming too much to say, that having an experience of forty years business we are better qualified to know your wants and to manufacture what you want than you are likely to find in seed stores or hardware stores. Is not the local harnessmaker entitled to-all of your trade? You never think, when your harness breaks or your collars need repairs, of taking them to feed stores or hardware men. not take care of the harnessmaker at home, who is obliged to do your repair work Practice what you have taught-protect your local dealers.

SPECIAL OFFER.

For the next 60 days we will close out all of our Robes, Blankets and Bells at cost to make room for the biggest line of heavy and light harness we have ever placed before the public.

We carry a fine line of men's working gloves and mittens. Every purchaser of \$5 is entitled to a present of a useful piece of merchandise.

Thirty-two years in business in Bellefonte is a safe guarantee. We are here to Respt. yours,
JAMES SCHOFIELD, stay.

Tuberculosis In Cattle.

Professor Behring Discovers Method to Render Ani-

Advance sheets of Professor Behring's

forthcoming book on tuberculosis in cattle are available in Berlin. Professor Behring affirms that tuberculois in man and cattle is propagated by identical bacilli, and that the seeming difference between the human and the cattle bacilli result from the capacity of the bacilli to accommodate themselves to the organism in

which they live. Professor Behring says he has successfully infected cattle with virus from humans, producing thereby fatal animal tuberculosis. He also says be has discovered a method to render cattle immune against tuberculosis, which is done by vaccinating the cattle when they are young. This he de-clares to be his greatest discovery, and says the method is in use on farms at Marburg. He alluded to his method of inoculating cattle in his speech at Stockholm, when he was awarded one of the Nobel prizes.

WHAT THIN FOLKS NEED .- Is a greater power of digesting and assimilating food. For them Dr. King's New Life Pills work wonders. They tone and regulate the digestive organs, gently expel all poisons from the system, enrich the blood, improve appetite, make healthy flesh. Only 25cts. Green's Pharmacy.

McCalmont & Co.

LOSS OF TIME

IS A LOSS OF MONEY.

Why tinker and fool around wearing out your patience and wasting your time, trying to get your spring work done with broken or worn out implements. Farm hands demand high wages, you can't afford to waste their time, patching up and repairing old tools. That wont pay. Come to us and we will furnish you the

FINEST IMPLEMENTS

and your work will go on smoothly and profitably. You will get more done in a day and you wont be loosing money by wasting your time. Then when you have good implements, dont forget that FRESH SEEDS AND GOOD PHOSPHATE

are the next thing needed. These we have also. Come in and see us and we will try to start you right in the farming business this spring.
