

FARM NOTES.

-To prevent disease of potatoes add two ounces of corrosive sublimate to two gal-lons of hot water. Allow it to stand half a day and then add the solution to 12 gal-lons of water. Wash the potatoes, so as to free them from dirt, and immerse them in the solution, to remain two hours; then dry them and out for seed.

-Trim the fruit trees, so as to have the tops open and free, not allowing any of the limbs to touch or cross each other. Much depends upon the first trimming of a young tree, as its shape is then fixed, and the cutting away of the small limbs can be done with less injury to the tree when it is young than at any other time.

-When kerosene is used on the hen roosts it is important that more attention be given the under or lower side of the roost than the upper. It will be of no avail to saturate the upper side of the roost only. Lice hide away in the daytime, and especially under the roosts. Roosts should be detachable, so as to be well cleaned.

-When the hedge plants begin to die out the cause may sometimes be traced to lack of plant food. There is considerable wood removed from hedge plants every year when the hedges are trimmed, and this annual loss cannot be sustained by the plants unless they are assisted. Apply wood ashes freely every fall and early spring.

-Get your beds ready for the sweet po tato plants and use only seed that is free from rot. It is best to procure seed from some section where the sweet potato is not affected by rot, if possible. There are sev-eral forms of rot, one of them being gen-erated in the soil. For this reason it is well to set out the plants on a new location every year.

-The food left over on the ground ferments and decomposes in a very short time on a warm day, and it therefore becomes one of the main sources of gapes in chick-ens and cholera in fowls. Filth in the summer season should never be allowed. It is well to do away with troughs entirely, feeding only whole grains and scattering the food as much as possible.

-Unless there is a convenient market for the sale of vegetables the garden should be no larger than is necessary to afford a full variety, and in abundance, for the family, as the keeping down of the weeds and grass in the garden is a matter that may require attention just at the time when the farmer is busy with his spring planting; but every farmer should have a garden, even if but a few kinds of vegetables are grown.

-A small quantity of land plaster in the hills of corn will be found beneficial, as the plaster absorbs moisture from the atmosphere and will give a green color to corn when other corn not receiving plaster will be yellow. Plaster is not considered a valuable fertilizer, but it is, neverthe-less, capable of absorbing a certain amount of ammonia derived from the air, and in proportion to its cost gives excellent results, but it does not take free nitrogen from the atmosphere.

-Garden seeds are usually plauted too deep. Small seeds require just enough the popular little garment are now copied covering to give them moisture and dark-ness. The soil should be very fine, so as

FOR AND ABOUT WOMEN.

Nobody keeps a runaway horse, but many keep a runaway temper, and think nothing of it.

It is a toss-up, since the last policy was taken out, which woman carries the heavier life insurance, Mrs. Leland Stanford, of California, or Mrs. James Dunsmuir, of Toronto. The odds are in favor of Mrs. Stanford, for she now is rated as insured for "over" \$1,000,000, whereas Mrs. Dunsmuir is put down at an even \$1,000,000. They are unquestionably the most heavily insured women on the American continent and far ahead of any of their sisters in the East. The next nearest is Mrs. Basil N. Duke, of Durham, N. C., who has policies amounting to \$385,000.

The extremely heavy vestings are no longer smart, although mercerized stuffs in light weight, in a rather coarse basket weave, termed lotus cloth, will be very popular for shirt waist suits or for the louse to be worn with the outing or walking skirt and jacket.

The small boy wears a suit of white duck as usual this season, but the trousers are as usual this season, but the trougers are entirely different from last year's suit. They are much shorter in effect and re-markably full, looking for all the world like the little gathered petticoats or baggy zonave trousers. They are quite unlike the streament without season in hore's with the season in hore's without the season in hore's with the season in hore season in hore's with the season in hore short trousers hitherto seen in boys' suits. The new trousers only reach to the knee, or rather a little above it. The edges are hemmed over an elastic and the full, baggy part then drops over the knees. These novel knickerbockers are cut with one front for both legs, and one back form. They are only divided into trouser ends for half the length, because they are so full. For older boys the full knickerbockers are also worn, but in this case the legs are cut separately and seamed in the usual manner. These also are quite full and gathered above the knee, with the droop-

ing puff to fall over. The sailor blouse has a double yoke back and front of the duck, and this reenforcement is made visible by the outline of machine stitching. It has the usual sailor collar of dark blue or light blue duck, and turn-back cuffs of the same are stitched closely down like bands on the

lower edge of the seam. The novelty of this blouse finds expression in the service stripes of scarlet duck, which are removed from the sleeve proper, and are used to ring about the seam which joins the sleeve to the shoulder.

To judge from a number of stylish stocks now on the counters, neckwear finished off with a good sized loose bow is going to be popular. Many of the silk collars have the tie of soft taffeta, so fastened, in the front. Several kinds of white linen stocks have wash bows of their own material, and others again have straps through which a silk tie is drawn. The ties for these strapped effects are shorter than the average, and are not knotted in any way. The ef-fect is pleasing, but less so, on the whole, than the fluffy bow.

Few women realize what an influence the shirt waist is having upon our Ameri-

can fashions today. It is not only in its latest development— the neat and useful little shirt waist suit -that this influence is felt. We owe to it more than we fully realize in the way of comfort and common sense throughout the entire wardrobe. For the loose lines of

in the most elaborate blouses. Even the fluffy frocks for e

Fruit-and-Nut Fiends.

There is just one little, tiny in-finitesimal error in the assumpion that our primordial ancestors lived entirely upon uncooked fruits and nuts, a trifling miscalculation which viti-ates the conclusion that what met our wants when we dangled head-downward from a tree-limb will meet our wants now that we have been turned t'other end up. The error is this : They didn't. No animal lives exclusively on vegetable or animal food. What's a chicken, carnivorous or graminivorous? Graminivorous. of course. It lives upon corn and oats and wheat, the seeds of plants, grass-blades, the lettuce that you expected to eat, and all such. Yes, well. You keep them on that diet and see how many eggs you get. And then you give them beef scraps with their grain and notice the difference. —Engene Wood, in *Everybody's Magazine*.

Rates to St. Louis World's Fair.

Tickets to be Sold at Very Low Rates Via Pennsyl vania Railroad

For the Louisiana Purchase Exposition. to be held at St. Louis, Mo., from April 30th to December, 1st, 1904, several forms of excursion tickets to St. Louis will be placed on sale by the Pennsylvania railMan With Rubber Ribs.

In the frame of Raymond Moore, of No. Gorsuch avenue, of Baltimore, 29 29 Gorsuch avenue, of Battimore, two rubber, tubes have taken the place of the sixth and seventh ribs on the right side. The tubes were placed in the patient at the Baltimore University hospital, by Drs. Hamilton Brown and Charles H. Blake. Two months ago young Moore suffered an attack of pneumonia, from which developed empyema, a disease characterized by the formation of pus in the pleural cavity. Attending physicians decided upon the operation. The tubes will drain the chest,

and the doctors say that in about six months the covering of the missing ribs will nucleate and form new bones.

VIN-TE-NA Cures Loss of Appetite, Sick Headache, Dyspepsia, Indigestion, Billious-ness, Constipation, Dizziness, Jaundice, Torpid Liver, Heart Burn, Foul Breath, etc. Try a bottle and be convinced. If it fails to benefit you your money will be refunded. All druggists. 48-45

-Lightning got in its work of havoc at Warriors-Mark very early Friday morn-ing. It struck the telephone wire some-where in the vicinity and besides running into the office at the depot and tearing out the switch hoard, it split up and destroyed several poles along the line. Fortunately the 'phone girl was not in her office, else there would have been a more serious result of the electric caper to record.

MAKES A CLEAN SWEEP .-- There's nothing like doing a thing thoroughly. Of all the Salves you ever heard of, Bucklen's Arnica Salve is the best. It sweeps away and cures Burns, Sores, Bruises, Cuts, Boils, Ulcers, Skin Eruptions and Piles. It's only 25c, and guaranteed to give satisfaction by Green's druggist.

· A YER'S

to contain no lumps. Some seeds, how-ever, such as peas and beans, should be plauted somewhat deep and the ground rolled over them. Pressing the earth on seeds hastens germination, and it also in-creases the chances for the seeds of weeds, but if the rows are made straight it will not be difficult to keep down the weeds until the crop gets well started.

-It will be a risk at all times to plant a young tree or vine between old ones of the same kind. The manure that may be placed at the location for the young plant will be at once seized by the larger ones, as they will immediately send out roots for that purpose, the result being that the young plaut is deprived of food and dies. It is also a mistake to set out a tree in the place of an older one that has died, as disease may be in the ground, and also hecause the plant food necessary for the new tree has been used by the tree which form-erly occupied the location.

-Oats and peas may be seeded together and until late in the season. It is better to cut them near maturity than too green. Daily cuttings are preferred, but to do so such work must begin before they reach the best stage. Farmers who have grown them for hogs turn the hogs in after the pods are filled and give them control, but there is some waste from trampling. The crop can be mowed and cured, stored under shelter, and fed as desired, but the cutting must not be deferred too late, as the green condition is preferred. When the crop remains until the peas show a yellow tinge there will be some loss.

-The purpose of pruning is to leave on-ly a sufficient number of buds on canes of the current season's growth to give such an amount of fruit the coming season as the age and strength of the vine can support. Pruning should be varied somewhat to suit the habits of the many different varieties. And the stronger growing sorts should have more wood allowed them than the weaker ones. The vines should not be allowed to bear much fruit until strong enough to grow vigorous canes with strong laterals. Thrifty laterals develop fruit buds near the base. These laterals are out back to from four to six buds depending on the age and strength of the vine. Al-low as much fruit to set as the vine can support and grow to perfection .- Farmer's

--All kinds of fruit trees and vines depend upon pollen for success in production. Some fruits that are well supplied with their own pollen will mature, but when the blossoms receive pollen from some other source the fruit reaches nearer perfection. Self-fecundated pears have been known to be deficient in seed, and plums of the same variety have given unsatisfac-tory results. The size of tomatoes may be quite dependent upon the amount of pollen they receive while in bloom, one receiving a large amount, and growing four times as large as one receiving only a small quan-tity. The number of insect visitors in an orchard determines, to a large extent, the amount of cross-pollination carried on, as the pollen of the apple and pear is not produced in sufficient quantity, nor of the proper consistency, to he carried by the Three or four varieties of fruits should be planted together; that is, three or more varieties of apples, the same of pears, etc., and every fruit grower should have at least one hive of bees.

dress wear are being made nowadays on the simple plan of the shirt waist suit, and are out much the same.

These fluffy affairs are not lined, except occasionally with mousseline de soie. Th waists, having no bones or other stiffening, are just as loose and conducive to comfort as the cotton shirt waist of past summers. The drooping shoulder effects which six months ago seemed such utter impossibili-ties to the wardrobe of the American woman are becoming more and more firmly es-

tablished on this side of the ocean. It is no longer possible to have a "fancy" suit of any kind without the introduction of these sloping effects. On the most recent styles the shoulders

droop more pronouncedly than ever, and all trimming is applied with a view to accentuating this line.

This vogue has been the means of bring-ing back to us the old-time "vest" effect. You must say waistcoat, to be modish. This feature now becomes a very handy

one, since it supplies a place in which to hang a sleeve that has been crowded out of its usual position by the encroaching length of the shoulder. When hung into a waistcoat the top of the sleeve disappears from view beneath

the overhanging shoulder—an arrangement which adds much to the wearer's comfort. The pronounced shoulder droop has led

in a perfectly logical fashion to a change in the method and manner of our coats.

The liking for separate coats, after many seasons of "matching," is another result of the same feature. Not in years have jackets been worn so different from the rest of the costume. The fashion, being greatly due to the fullness of present-day sleeves, is likely to con-

tinne. To accommodate the frills and fullness of the dress sleeve, coat sleeves are generally made very large at the bottom.

In the long coats for evening and theatre wear the sleeves are simply enormous. The lining is out in exactly the same shape as the outer material in order not to crush the delicate puffs and ruffles over which they must be slipped.

Doors as backgrounds for pictures is a new fad, and in many modern rooms one may see now a picture or a mirror fastened to the upper panels of a door. For au unused door narrow shelves are sometimes fitted between the framework and filled with books and pottery.

Full skirts are coming in this summer, and the tide sets in with those of sheer fabrics, fine silk muslins, mulls, chiffons and lawns and dimities, and the ever-useful Swiss muslin.

All this means a return to circular skirt trimmings, so that women and girls will take up a great deal more room in the parlor, on the poich, and wherever full skirts are worn.

Consequently, we shall all look wider than usual. Some of us will wear ruffles, others straight flounces, and some garlandshaped flounces arranged in festoons. This is an idea borrowed from the upholsterer, but it seems to meet with admirers.

This is a chef's way of salting almouds Blanch and dry the nuts, put them on a baking sheet and roast them in a hot oven to a light brown. Sprinkle them with a gently until dry. * store of snoa synd fliw

road on April 25th, as follows :-
