## Aemocratic Watchman. Bellefonte, Pa., Sept. 9, 1904.

## The Pennsylvania State College.

The Pennsylvania State College, which has just completed the forty-ninth year of its existence, has, for the past few years especially, grown very rapidly both in the number of students in attendance and in the scope of its work. The last catalogue shows not only the largest enrollment in the history of the College (730 in attendance and 2100 in Correspondence Courses) but many improvements in buildings, equipments and courses of study. Having its origin in the desire of many thoughtful citizens of the State to elevate the business of series later to the state to elevate the business of agriculture, it has, without losing sight of its original aim, developed systematical-ly and logically throughout these years, and at the present time offers excellent opportunities for obtaining a general educa-tion along both classical and scientific lines, and at the same time has achieved a high reputation for technical education in Chemistry and Engineering that is recognized throughout the United States. all its courses thoroughly practical and modern methods of training are employed, the aim of the College being to turn out men of broad and liberal education, who shall be at the same time skilled in their particular line of work and fitted to enter at once upon professional careers. That success has been achieved in this undertaking is shown by the fact that important

and responsible positions are offered to graduates of the Pennsylvania State College by some of the most prominent engineering and manufacturing concerns in the country. An idea of the steady and rapid growth

of the College is shown in the following statement made up from the published records :

In 1882-3, the number of students taking a regular four years' college course (not including preparatory or special students)

In 1902-3, the corresponding number

In 1903.4, the corresponding number 618 In 1882-3, the entering Freshman class

numbered..... In 1902-3, the entering Freshmen class

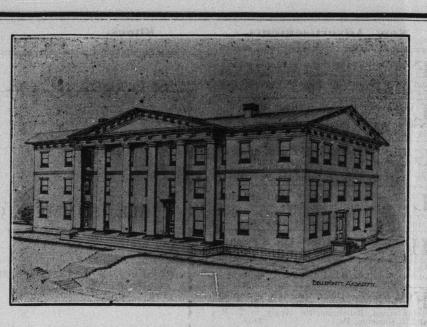

numbered...... 214 In 1903-4, the entering Freehman class

290 numbered.. In 1882-3, the total enrolled attendance was 87 students. In 1903-4 the total enrolled attendance was 730 students, repre senting 65 of the 67 counties in Pennsylvania, and 20 other States, Territories and foreign countries.

Notwithstauding an advance in the en trance requirements made this year, the prospects for next year's Freshman class indicate that it will be larger than the Freshman class of last year, which numbered 290 students. This increase in number is due in part, no doubt, to the fact that, with no tnition fee and with all other fees reduced to a minimum, the expense of attendance is, to say the least, as low as at any college offering equal advantages.

The College offers courses in Chemistry,

Agriculture, all branches of Engineering, Philosophy, Political Science, Mathematics. Physics, etc., as well as Latin Scientific and Classical Courses. A large proportion of its students are pursaing technical courses, but the College offers this year for the first time a course in Modern Language and Literature to meet a demand which has been felt for several years, especially on the part of young women who design to

THE NEW BELLEFONTE ACADEMY.

The above illustration is a correct reproduction of architect Robert Cole's prospective for the remodeling of the Bellefonte Academy. The design has been accepted by the Board of Trustees and the contractor is already pushing the work to completion. In general it is a restoration of the original building erected just one hundred years ago and when finished will add to the classic architecture of the town as well as provide more class and dormitory room to meet the growing needs of Bellefonte's notable school. On page 8 of this issue will be found the list of instructors for the next year at the Academy.

## Sneeze Germs Discovered. (Concluded from page 2.)

equired by employing it in the manner described. In many cases plugging the nostrils with a couple of little wads of cotton will promptly stop the distressing sneezing. When the eyes are inflamed bright sunlight is liable to make one sneeze -whence the value of the smoked glass. The cereal grains, such as rye and wheat, are grasses, and their pollen shares in the accountability for hay fever. Viewed under 513 a magnifying glass, the tiny flowers of grasses, which resemble lines in their struc-

ture, are very beautiful. As for the pollen, that which pertains to each species of plant is unlike that of any other plant. Indeed, by examining any bit of honey one can ascertain, with the aid of a microscope, just what kinds of blossoms were rifled of their

sweets by the bees to make it. All of us sneeze now and then, whethe we have hay fever or not, but to few people has it ever occurred to inquire what a sueeze really is. Something irrisates certain nerve ends in the lining of the nasal parrages, and the result is a spasm. There is a sudden closing of all the passages by which air may be expelled from the lungs, in preparation for which a sudden breath is taken. A violent contraction of the diaphragm and other muscles follow. Then the throat and nose are open, and a vigorous expulsion of air occurs. Such a thing it is to sneezea performance ordinarily wholesome and agreeable. Sick people, it is said, seldom sneeze.

RENE BACHE.

Philippines at the World's Fair.

Not even in the heart of Manila city could there be found forty-seven acres of Philippine territory as interesting as that amount of space covered by the islands' display at the World's Fair. knowledge of several primitive ind

700 women weaving a coarse cloth on a rude hand loom, others making baskets, others tending irrigated fields of rice. One group of men are in village council, trying an offender according to their tribal laws; others are slowly moving in a circular dance to the thump of tomtoms and the clang of brass gongs; others, again, are smelting iron by the aid of a primitive but most ingenious bellows, the constituent parts of which are a bamboo tube and an airtight mop of feathers working therein like the piston of a syringe. And these are but a few of an almost endless va riety of life pictures.

The ethnological problem is a some what complicated one; but, although there are no fewer than sixteen races represented among the village dwellers, the scouts and the constabulary, each race speaking its own dialect and following its own customs, all may be roughly classified into four groupsthe true aboriginals or non-Malays, the pagan Malays, the Christian Malays and the Mohammedan Malays.

The first are the dwarf Negritos, with dark skins and woolly heads, wearers of scanty raiment, proficient in the use of the bow and poisoned arrow, a race of nomads and forest dwellers, pagans pure and simple. They live in their own stockaded village.

Next to them are the Igorrotes, whose origin is traced back to the first wave of Malay invasion. Here, again, we have scanty clothing, amounting almost to nudity, but copper colored skins, long wavy tresses. pleasant featured faces and fine physiques, even though the stature be small. Among these pagan Malays are the head hunters and the dog eaters. They are savages, yet have their code of laws and a

come teachers.

During the past two years the College has added five new buildings, costing over \$400,000.00 These include an Auditorium, costing over \$150,000.00, the gift of Mr. and Mrs. Charles M. Schwab, which was dedicated in June, 1903; a Library build-ing, costing \$150,000.00, given by Audrew Carnegie, Esq., which is to be dedicated this fall; one wing of an Agricultural building which is to cost when completed \$250, 000.00, and on which \$100.000.00 have already been expended, the funds for which are provided by the State; a Track House for the members of the College athletic teams; and a small dormitory annex to provide for the overflow of students. Ground has just been broken also for a large brick dormitory and dining hall, which will be completed in the spring of 1905. The dining room of the new building is to

he capable of seating nearly 900 at one time, and the three upper floors will house comfortably 140 students. To provide tem-porarily for the increase in attendance, a second dormitory annex is to be erected during the present summer vacation. The erection of these buildings was made imperative by the rapid growth of the past few years, but provision has also been made for the future development of the College. In addition to these new buildings the old ones have been remodeled, class rooms added, laboratories increased and new equip-ments purchased, so that in all lines of work the College is thoroughly modern and up-to-date.

One cause of the rapid growth of th College has been stated above to be the moderate scale of expenses, but undoubtedly another cause is the remarkable success of its graduates who though they have but recently entered the field, are already holding positions of responsibility, and winning distinction in nearly every industrial profession.

The location of the College is one of unsurpassed beauty, in the very heart of the Allegheny region. It affords no oppor-tunity for the unwholesome diversions of city life, but furnishes ample means for the all-round development of students by every form of rational recreation and enjoyment. Large numbers of students engage in various forms of athletic exercise ; a spacious gymnasium gives opportunity for regular physical training during the winter months; an active Y. M. C. A. maintains a membership of over 200; and many other literary and social organiza-tions attract the interest of students and assist in the development of a manly and cultivated tone of College life.

Any person who is interested enough to seek information on any particular point can readily obtain it by addressing.

THE REGISTRAR. July 25, 1904. State College, Pa.

The Sway of Woman.

No man yet was so high up that his wife couldn't call him down.

Men do the headwork of the world, but women are the head rests.

Man was made from dust first as that woman might sweep all before her. One great difference between men and women is that women pray over what a

man swears at. Many a man who says "The fools are not all dead yet," thereby proclaims to the world that his wife isn't a widow.

Here is an exposition within an extries position, a little wheel that revolves independently of the larger one encompassing it.

Scores of buildings are filled with exhibits, native life is depicted by as many different villages as there are tribes on the islands, military drills are given by Philippine troops, and concerts are rendered by native bands. For its amusement features the Philippine exposition has the humorous Igor-

SOUTH ENTRANCE PALACE OF LIBERAL ARTS, WORLD'S FAIR.

rote, who dines on dog meat, and visitors are entertained by Visayan actors and actresses. Nothing is lack-

ing to make the show complete. The Administration building is a replica of the government offices in Manila, while the Art and Education building reproduces in miniature the cathedral within the walled city, even the mellowed tints of age being faithfully rendered. A section of the ancient but still serviceable town wall has been reconstructed to serve the double purpose of a gateway to the show and a museum of arms and war relics.

The other main edifices are types of Filipino homes, being built of undressed timber, bamboo and rattan, with thatched roofs and broad verandas.

Then there are the tribal villages nestling under the trees, some of the houses perched high up among the boughs, others on piles above the waters of the Arrowhead lake, all of them

actual dwellings fashioned of native materials by native workmanship and materials by native workmanship and \_\_\_\_\_\_Fate never wounds more deeply the illustrating the manners, customs and generous heart than when a blockhead's pursuits of their occupants. Here are
