Acmocratic Matchman

Bellefonte, Pa., October 7, 1904.

FARM NOTES.

-See that the poultry house is well ventilated.

-With poultry, as with other products, it is a safe rule to market as soon as ready

-Rules may be made for governing dairy work, but there can be no rule made for feeding the cows in regard to quantity and quality of food. Each cow will have her special demands, and they must be complied with.

-Young trees are sometimes thrown over by the winds when prolonged rains occur, and the ground is very soft and mushy. Use stakes to support them, and also bank earth around them before winter sets in.

-The enterprising fruit grower will visit other orchards than his own as opportunity offers. When he finds things better than at home it inspires him to greater effort; when his own orchards ap-pear the best it makes him feel satisfied and contented.

-One day's work at trimming in Sep-tember or October may be worth three in winter or early spring. Large wounds, made after the sap has commenced flowing in the spring, rot back to the heart. Trim all trees and vines when the leaves begin to fall, or as soon as the fruit would be ripe.

-It is claimed that it takes seven acres of American wheat to pay for the sugar grown on one acre in Europe with sugar beets. The importance of the beet-sugar industry in this country should receive the consideration of every farmer. Sugar is an article for which we have a market at doors.

-Many trees would bear fruit if they had about one-half of the limbs and branches cut out so as to permit the sun to act on the leaves and assist in preventing mildew. Too much top and too many branches draw from the soil the nourish ment that should be used for fewer

-Fruits and vegetables that are to be stored away for use during the winter should be left out as long as the season will permit. Sweet potatoes and some other vegetables are easily injured by frost, and, of course, should be harvested first; they can be stored in a shed and afterward transferred to a cellar or pit. On the other hand, parsnips and salsify are the better for a light freezing, and can be left in the ground until all other things are harvested

-Some dairymen who have been in duced to rear their calves and breed for better cows report that they could not easily be induced to revert to the former practice of buying their dairy cows. By producing good cows the milk and butter product on some farms has been doubled. and no report shows less than 50 per cent. improvement. The result is that farmers who could rarely retain their farms under the former system are now realizing profits every year.

-When cows are affected with tuberculosis it is difficult to discover the fact in the first stages. The animal may have a cough or be emaciated, yet be free from the disease. Veterinary surgeons now test them with tuberculin, which induces charthough this test has been accepted by many, yet it has strong opponents, who claim that it does not fulfill expectations. Should the tuberculin test prove unreliable the examination of herds for tuberculosis will be very difficult. -Much difficulty is often experienced by farmers in making cuttings of grape and other wood grow when planted in cold soils in the spring. The trouble partly arises from the fact that air is much warmer than the soil, which starts the bud before root action commences. If cuttings are placed with their base ends in dry soil, in the cellar bottom, the base will become callous and be ready to emit roots as soon as planted. Market gardeners make every cutting live by furnishing bottom heat, which simply means keeping the soil in which the cutting is exposed to the air. -The apples that are to be kept over winter must be carefully picked from the trees by hand, as every apple that falls to the ground will be bruised and rendered the ground will be bruised and rendered unfit for the barrel, any injury hastening decay. Should decay begin with one ap-ple all the others in the barrel are also liable to become diseased. Apples must be stored in a cool place, but should not freeze. It is the alternate changing of temperature that damages them in storage temperature that damages them in storage. Clean barrels should be used, the apples should be as uniform as possible, and sent to market in an attractive form. -The cost of feeding a cow weighing 1000 pounds one day varies in different sections of the country, and according to sections of the country, and according to the kind of food allowed. In Wisconsin food consisting of 32 pounds of corn en-silage, 10 of clover and 5 of bran, or 15 of bay, 5 of corn fodder, 5 of bran and 15 of gluten meal, made the cost in either case amount to 10³/₄ cents. In Iowa 8 pounds of corn, 8 of oats and 15 of clover hay made the cost 8 cents per day. In Minnesota the cost was 5 cents per day for 18 pounds of clover hay, 10 of beets, 10 of bran and 4 of shorts, or 14 pounds of prairie hay, 10 of bran and 4 of shorts.

FOR AND ABOUT WOMEN.

It is often said that American girls are better looking than English maidens says a writer in the London World. But, strictly speaking, there can be no comparison between the two. The English girl is pretty in a way wholly different from that of the daughters of Brother Jonathan, and, happily for her, her good looks, less showy as they may be to start with, wear far better than these of la belle Americaine. Like transatlantic clocks and bicycles, the complexions and facial contours of the Mamies and Sadies of the "other side" only last for a brief spell. By thirty the American girl has become an irredeemable wreck, whereas the Englishwoman anticipates this age with no dread. She is more often than not at her best when she reaches her third decade; and assuredly the good looks which successfully mature are of greater worth

than those which do not outlast early youth. In these circumstances, comparison between the women of the two nations is really impossible.

Washsilk waists and ribbons, it should be remembered, by no means stand careless laundering. For white silk waists the last rinsing water should be very slightly blued, and no waists or ribbons ever washed in very hot water. Make a lather of tepid water, rubbing no soap directly on the fabric. If the garment is much soiled, soak it first in a little borax water. After rinsing in several waters it should be wrap-pred in a soft cloth, the moisture to be pressed, not wrung, out of it. It can be ironed at once while still wet, but a piece of thin muslin must be put between the iron and the silk, so long as a bit of mois-ture remains in it, otherwise the iron will streak the fabric in a way that is difficult to remove. When the silk is quite dry and fairly smooth, it may be finally ironed over lightly without the intervening muslin. If a little firmness and gloss are liked in the silk a teaspoonful of prepared glue to a quart of water may be added to the last rinsing water.

USEFUL TO KNOW.

Plunging a bruised or crushed finger into very hot water will relieve the pain more quickly than anything else. It is claimed that deep breathing de-creases the size of the abdomen, and rounds out the flattened chest. Always try this exercise in a well ventilated room

An excellent mustard plaster for children is made one part mustard and four part of flour, mixed with equal parts of glycerine and white of an egg.

For whooping cough, asafeetida made into a paste and spread on kid to form a plaster for the chest gives much relief. It may be worn constantly during the full period of the disease.

taken after the poison has broken out.

The French method of administering castor oil to children is to pour the oil in-to a pan over a moderate fire, break an egg into it and stir. When the egg is cooked flavor with salt, sugar or currant jelly.

It is claimed that grated wild turnip, saturated with turpentine, applied to a felon will relieve the pain at once, and will open the felon in twelve hours. Then dress with a healing salve.

Dr. John B. Deaver Says Delay in Operating is Responsible for Much Mortality.

S. Co

sorts

C

That there should be no deferment of That there should be no deferment of the use of the knife with appendicitis is the emphatic statement made by Dr. John B. Deaver, surgeon-in-ohief at the German hospital, in a paper published in the current number of the *Journal* of the American Medical Association. The hesi-tation of many practitioners to promptly operate for the disease, according to Dr. Deaver, is responsible for much of the mor-tality. feel had r and

tality. Speaking of the causes which often lead to the death of the patient, the doctor says: The lack of common sense and ordinary intelligence in eliciting the history of the

attack or the neglect of the use of the only instrument of any service in the diagnosis of this disease, the palpating hand of the practitioner, is responsible for much of the mortality. "The failure to make an early diagnosis

of acute appendicitis is responsible for most of the factors entering into the mortality of the disease. With a nearly unanimous agreement among experienced sur-geons that operation is indicated in the early hours of the attack, the great importance of prompt diagnosis can be clearly per-ceived."

Washout on Burlington.

PEORIA, Ill., Sept. 26.-A washout on the Burlington railroad near Elmwood, BEAR caused a wreck today, in which one man was killed and three persons probably THE fatally injured. The wreck took place at the junction of a small stream and the SIGNA Kickapoo creek. A rain storm visited that OF section and the roadbed of the track was washed out for a short distance, leaving the rails suspended in the air.

A train struck the rails at a high speed. The engine shot across and left the track, but remained up-right. The baggage car was hurled into a deep ditch and the smoker on top of it. The chair car re-mained on the track.

The killed : John Bock; Probably fatally injured; the Rev. J. Kenniston, Elmwood Frank Reeding, Galesburg ; M. Lentz, Galesburg.

About a dozen of the passengers received bruises and minor injures. The engineer and fireman remained on their engine. The track was tore up for 300 feet.

-"My wife is a famous cook," Mullins announced, proudly. "So ?" responded Barlow, indifferently. "Yes, sir. She concocts sances that make even health foods palatable."-Life.

Niagara Falls Excursions.

The Pennsylvania Railroad Company has selected the following dates for its The juice of half a lemon in a cup of strong black coffee, without sugar, will often oure a sick headache. If any person who is liable to poison with the poison ivy will take pure olive oil after being exposed to it, he will feel no bad effects, as the oil neutralizes the ef-fects of the poison, even if a few doses are taken after the noison has broken out. Niagara Falls at 9.35 P. M.

Nagara Fails at 9.36 P. M. Excursion tickets, good for return pas-sage on any regular train, exclusive of limited express trains, within ten days, will be sold at \$10.00 from Washington; 7.80 from Altoona; 7.40 from Tyrone; 6.45 from Bellefonte; 5.10 from Ridgway; \$6.90 from Subbury and Wilkesbarre; \$5.72 from Williamsport; and at proportionate rates Williamsport; and at proportionate rates from principal points. A stop-over iwill be allowed at Buffalo within limit of ticket returning.

-Although the law may fix a minimum percentage of solids in the milk sold in market, yet milk varies according to the kind of cows and the food and water alkind of cows and the food and water al-lowed. It is possible to water milk through the cow, and the milk from one cow will vary day after day. The highest per cent. of solids in milk found in Eng-land, when tests were made, was 14.49, and the lowest was 11.02. The proportion of fat ranged from 2.20 to 4.85 per cent., showing that some of the milk man mean. showing that some of the milk was more than twice as rich in cream as others. In this country the percentages of both solids and fate have been greater where tests have _ been made.

-Sheep will thrive better on grass than -Sneep will thrive better on grass than if given grain and are heavily fed. During the extremely warm days they seek the shade, grazing after the sun begins to de-cline. The fact that the sheep will work for its feed at night prevents farmers from keeping the flock inclosed at the barn from dogs. If the pasture is good they will not stray away, but if turned out on hill-sides, where the herbage is scant, sheep cannot where the herbage is scant, sheep cannot well escape from their enemies, and as one or two dogs will inflict much damage to a flock in a single night it is almost impossi-ble to be successful with a flock unless dogs are restricted by law from proweing, by inflicting a penalty on their owners for permitting them to run at large.

The special trains of Pullman cars and make a past of fuller's earth and water, spread it carefully on the spots and let it remain until the next day. Brush off, and if the spots have not quite gone repeat the

To clean the coffee pot fill it with water, put in a pinch of borax and a piece of hard scap and set on the stove, letting it boil for half an hour. It will be as bright as new, and should be submitted to this treatment frequently.

When grease is spilled on the kitchen table or floor pour cold water on it at once to prevent its soaking into the wood. It will quickly harden and can be lifted with a

To remove soot from a carpet, sprinkle plenty of fine salt over it and sweep along the grain of the carpet. Repeat until every trace of the soot is removed.

In making down pillows go over the wrong side of the case with an iron rubbed well with beeswax each time it is applied to the cloth, to prevent the down working through the cloth.

Flatirons should be washed every week and always kept in a clean, dry place. Few housekeepers use sufficient wax in ironing. Do not allow your irons to red hot, as they will never again retain the beat.

When winds blow and there is frost in the air put handkerohiefs, collars, cuffs and all small articles in the wash to dry

in a pillow case. The fabric is spared whipping by the wind, they will freeze dry and be quickly gathered for ironing.

Grape Juice .- Wash, drain and stem the grapes, put in a deep agate or porcelain kettle mash well with a wooden potato kettle mash well with a wooden potato beeter and heat slowly until they begin to simmer. Have ready a number of strain-ing cloths or bags made of three thicknesses of cheese cloth and wrung out of warm water. Put about two quarts of the hot pulp in each and hang up to drip. When no more juice drops from the bags squeze as dry possible, keeping this cloudy juice separate. Have ready some warm sugar syrup made by boiling two pounds of angar syrup made by boiling two pounds of sugar in one pint and a balf of water for five minutes. To the clear juice add sufficient of the sugar to pleasantly sweeten. Fill bottles or jars with this juice, place in a canner with the cover or corks beside them and process for 40 minutes; or place in a

steamer over boiling water, cover closely and steam for an hour. Before removing from canner or steamer put on covers of corks and tighten as the grape juice cools. It corks are used tie down next day with stout twine and dip the tops in melted paraffine.

Grape Wine.-Pull the grapes from the stems, discarding all that are imperfect. stems, discarding all that are imperfect. Bruise thoroughly, but do not mash the seeds. Measure and pour into an earthen or wooden vessel. For each gallon of mashed grapes add two gallons of water and let stand for three days, stirring three times a day. Strain and measure. To each gallon of liquor add two pounds and a-half of granulated sugar. Stir frequent-ly with a wooden spoon until the sugar is dissolved, then cover with a thin cloth and let stand in a moderately warm place for

The special trains of Pullman cars and day coaches will be run with each excur-sion running through to Niagara Falls.

An experienced tourist agent and chap-

eron will accompany each excursion. For descriptive pamphlet, time of con-necting trains, and further information ap-ply to nearest ticket agent, or address Geo. W. Boyd, General Passenger Agent, Broad Street Station, Philadelphia. 49-26-7t

Reduced One-Way Colonist Rates Vis Pennsylvania Railroad to Colorado, Arizona, Mexico, California, and Other Western Points.

From September 14th to October 14th, inclusive, the Pennsylvania railroad com-pany will sell one-way Colonist tickets from all points in its territory to Western and Southwestern points at greatly reduced rates, thus affording a specially attractive opportunity to visit the growing and rapidly developing crop-producing sections of the great Western Empire. Detailed information as to enter and times of the information information as to rates and times of trains can be had of all Pennsylvania railroad ticket agents. 49.37-21

Carlisle Indians-Bucknell Football.
