

MAKING MAPLE SUGAR.

The Modern Way and the Crude Methods of Early Days.

The sugar season opens a busy industry in Maine, New Hampshire and Vermont.

Sugar making nowadays is a science. Only in the extreme rural sections still remain the wooden buckets and cedar spiles.

No longer are there the crude methods of an open fire, of the kettles strung on green forked poles.

Important changes in the sugar industry have lessened the work of the farmer. In the early days wooden buckets and handmade cedar spiles were used.

As the snow melted the spiles had to be drawn, new holes nearer the ground made and the bucket replaced.

Nowadays the spiles are of metal and the pails are hung on them. The evaporator is a sample of the rapid strides in sugar making facilities.

Occasionally a tree runs a bucket full every fair day during the season. An average of ten quarts, although the general run is about half that amount.

Good, honest, sirup weighs eleven pounds to the gallon, and it takes a barrel of thirty-two gallons of sap to make a gallon of sirup.

THE MAGNETIC COMPASS.

First Used on European Vessels in the Twelfth Century.

Some Asian people, perhaps the Chinese, discovered many centuries ago that a kind of iron ore possessed a very peculiar quality. We call this ore magnetic ore, or, in more common language, lodestone, and it is very widely distributed, especially in the older crystalline rocks.

It is an open question whether the Chinese utilized the directive power of the lodestone, but it is certain that the first rude compass was not used on European vessels before the twelfth century of our era.

Miraculous Multiplication. A lady who recently bought a dinner service consisting of fifty-four pieces for \$1.35, was informed by her housemaid the next day that the bargain had become still more wonderful, for it now consisted of 1,125 pieces.—Punch.

Disappointing. Mrs. Justlooking—Have you any hand embroidered waists? Salesman (who has waited on her before)—I'm very sorry to disappoint you, madam, but we have.—Chicago News.

Colleges & Schools.

IF YOU WISH TO BECOME.

- A Chemist, A Teacher, An Engineer, A Lawyer, An Electrician, A Physician, A Scientific Farmer, A Journalist.

NOTE: If you wish to secure a training that will fit you well for any honorable pursuit in life.

THE PENNSYLVANIA

STATE COLLEGE

OFFERS EXCEPTIONAL ADVANTAGES.

TUITION IS FREE IN ALL COURSES.

URING EFFECT IN SEPT. 1906, the General Courses have been extensively modified, so as to furnish a much more varied range of electives, after the Freshman year, than heretofore.

THE FALL SESSION opens September 15th, 1906.

For specimen examination papers or for catalogue giving full information respecting courses of study, expenses, etc., and showing positions held by graduates, address

Shooting Down the Alps on Skies.

The quest for a moral is provoked by a long list of skeeving accidents in the Alps.

In itself the exercise can hardly be considered more perilous than skating, though the proportion of sprained ankles and twisted tendons is higher, but when the skier skoes a distance from his base and ventures upon unfamiliar ground there are at least three ways in which calamity is liable to befall him.

Sufficiently Identified.

She walked into a branch bank on upper Broadway and pushed a check through the paying teller's window.

"You will have to be identified," said he. "I don't know you, madam."

"You don't eh?" said the woman, with fire in her eye. "Aren't you the father of the Smith family that has a flat in the Pleremin apartments?"

"Yes," drawled out the old soldier. "Whatever did you do with the whetstone? I never could find it. We 'lowed mebbe you took it along with you."

"No, no! I put it on top of the gatepost—that high one." "Mebbe you did. Nobody else could have reached it, and none of us ever thought to look there for it."

Where Lincoln Put the Whetstone.

A soldier at whose house when a boy Lincoln paused in his tramps in Illinois and who lent him a whetstone to sharpen his jackknife met him during the war in Washington.

"Well, I am the red headed janitress that your wife's always complaining about. When you left home this morning I heard you say: 'Emily, if our children get fighting with that old fury in the basement don't quarrel with her. Wait till I get home and let me talk with her.' Now, if you think you can get the best of an argument with—"

"Here's your money, madam," said the paying teller. And she took it and went.—Everybody's Magazine.

Why He Wanted a Pass.

When Jim Fisk was in his glory as a railroad magnate one day he was greatly annoyed by people asking for passes over his road for all sorts of reasons.

"Give this man a pass to anywhere and return. He is the first man that has told the truth today."—Boston Herald.

A Couple of Bulls.

On the edge of a small river in County Cavan, Ireland, is a stone with this inscription: "When this stone is out of sight it is not safe to ford the river."

"My friend," said the man who was getting out of the barber's chair with a slashed cheek, "you have enlightened my mind on a point that has hitherto been a mystery."

"What is that, sir?" "For the first time I understand why in former times the village barber was also expected to be the town surgeon."—Washington Star.

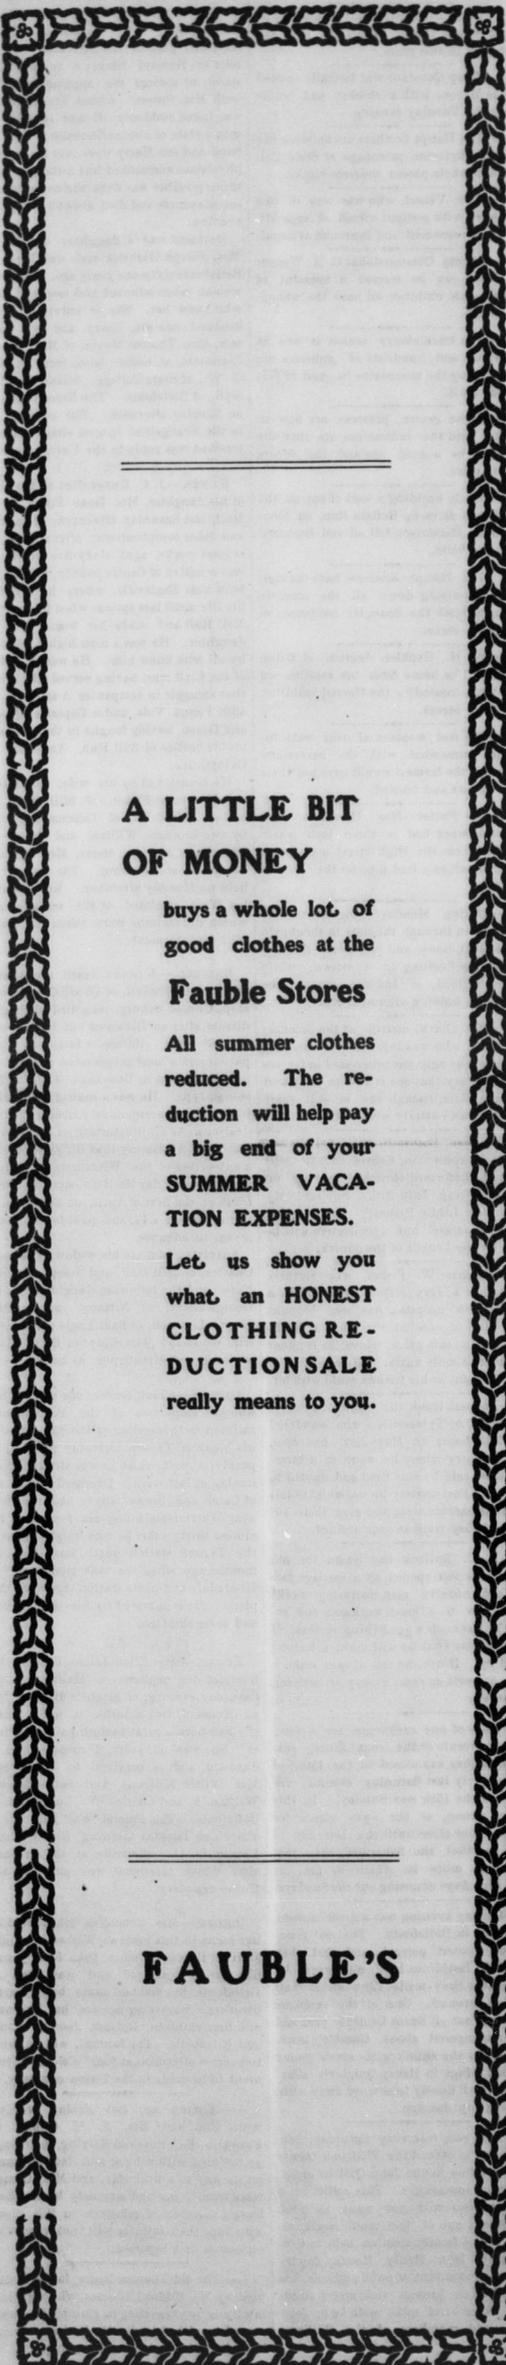

Her Divorce Portion.

"Mrs. Jones just got a divorce from her husband for throwing salad in her face," said one.

"Did she get alimony?" asked the other. "No," replied the first. "She got the salad."—New York Press.

Do not try to drive your employes ahead of you, but keep ahead of them and invite them to come on.—Success Magazine.

Faibles Great Clothing House.

All summer clothes reduced. The reduction will help pay

a big end of your SUMMER VACATION EXPENSES.

Let us show you what an HONEST CLOTHING REDUCTION SALE

really means to you.

FAUBLE'S

CONTROL OF ENERGY.

Is it Possible For the Human Race to Avert Extinction?

The only conceivable way in which the human intelligence can ever succeed in averting the "procession of the great year" is not by postponing the issue, but by reversing the process.

The question is this: While energy is being dissipated in accordance with the natural law, can we so manipulate things as to accumulate energy, making the unavailable available—notwithstanding the fact that cosmic processes seem to be essentially irreversible?

Now there is assuredly no inherent reason why we should not accomplish this. It is true that hitherto all the atomic evolution that has been observed is atomic disintegration.

We may speak now, indeed, of the analysis of the elements. But so it was, we may remember, that the older chemistry began, and yet analytic chemistry was the precursor of synthetic chemistry.

We began by breaking up compounds, but now we can make them—can, indeed, make compounds hitherto unknown in nature.

Similarly, it is more than probable that we shall ere long learn to achieve the synthesis of the elements as well as their analysis. No energy is ever lost.

Even when the radium atom, itself the child of the uranium atom, breaks down and dissipates its energy, ending, it is supposed, as the dull atom of lead, the original energies are not destroyed.

Why should they not be gathered up again and thus again become available? Are matter and energy to go on their way, ultimately destroying the human race? For myself, I incline to the view that victory will rest at last with "man's unconquerable mind."

C. W. Saleeby, F. R. S., in Harper's Magazine.

Thackeray and Dickens.

This is the way George Henry Lewes once characterized Thackeray and Dickens in the way of service to a friend: Dickens, he said, would not give you a farthing of money, but he would take no end of trouble for you.

He would spend a whole day, for instance, in looking for the most suitable lodgings for you and would spare himself neither time nor fatigue.

Thackeray would take two hours' grumbling indecision and hesitation in writing a two line testimonial, but he would put his hand into his pocket and give you a handful of gold and bank notes if you wanted them.

A Too Familiar Snake.

Seeing snakes is a common experience with the inhabitants of India and one unconnected with any suggestions of bibulousness.

An English nurse tells of a little boy who lived in the next bungalow to hers and had his bread and milk every day on the veranda sitting in a child's high chair.

One morning, hearing him talking and crowing to himself apparently, she was paralyzed on looking out to see him gently tapping the head of a cobra with his spoon, saying, "Naughty, naughty!"

The snake was drinking the milk out of the bowl, paying no heed to the child. In that mysterious country the snakes may be heard rustling across the verandas and have an untidy habit of shedding their skins anywhere.
