

Bellefonte, Pa., June 1 4, 1907.

FARM NOTES.

-Trim evergreen hedges.

.

-Keep account of your crops and consignment

-The farmer "pays the freight" on San Joes reales

-Give roses plenty of water. Cut flow ers as soon as in full blog

-Many flower seeds are very small and will not do well in rough, lumpy soil.

-A new insect-the apple leaf miner, is getting in its evil work in some parts of the country.

-It is a mistake to keep food continually before the hogs after they have been put on full feed.

-No hog can be healthy or produce meat of the best quality if compelled to drink putrid water.

-Suppose you sit down and tell us of an industry that will not be helped along with any help given to agriculture.

-As soon as a hen becomes useless sell her. She is better out of the way even if you do not get the highest market price.

-Gather and destroy all fruit dropping prematurely. This will diminish insect crop and increase fruit crop for next year.

-Has the winter suggested any new ideas in household conveniences? How are your women folks cared for in regard to drying the family washing?

-If you have a good home market, do not look elsewhere for the sale of your fruit, unless you have something extra fine and some first-class customers.

-See those grape vines with their long new shoots swaying back and forth. That is their way of asking protection from the winds. Tying them to the trellis or arbor does it.

-When blackberry canes reach a height of three feet they should be pinched off. This can be done with a pair of six-inch soissors or sheep shears. Pruning shears are too clumsy for this kind of work.

-When cold storms come on it is a good plan to throw an old piece of oilcloth or some other waterproof cloth over the coops. It will protect the early hatched chicks from the rain and help make the coop warmer.

-To raise fine large specimens of fruit on a tree, graft it with an early and late sort. The early part will require the large portion of the nutriment until it is ripe, then the late sort will draw all the nourishment for its development.

-While the matted row system for strawberries is preferred by the majority of growers, yet it will be an advantage to train the first runners to grow in the rows (and not have the rows very wide) by cutting off the late runners that appear.

-Ducks need two feeds per day of a soft food mixture for quick assimilation. The bedding in a duckhouse needs frequent renewal, as their manure will plaster it up and dampen it easily. If confined with hens, they would soon create conditions not good for best results for the latter.

FOR AND ABOUT WOMEN. DAILY THOUGHT.

A little while a little love May yet be ours who have not said The word it makes our eyes afraid To know that each is thinking of. Not yet the end ; be our lips dumb It smiles a little season yet : I'll tell thee, when the end is come,

How we may best forget. -Dante Gabriel Rossetti.

There are two most important points to be settled in planning and preparing for the wedding feast ; the hour at which the ceremony is to be performed, and the number of guests to be entertained, as the nature of the refreshments and the manner of serving to be adopted naturally depend to and neck, red eyelids and inability to see a a large degree on whether the wedding re-ception or breakfast is to be large, a ceremonious function, or an informal affair there is strabismus or cast in the eye; and simply for the family and a few intimate friends.

The hours for the ceremony usually selected for a June welding are high noon, or four o'clock in the afternoon. The for-mer allows for either a formal, elaborate ache that medicines fail to cure. Nearly breakfast, or a cimple one, and the latter for buffet refreshments, which are served

four o'clock ceremony, the bride does not a very difficult task, aud should be entrustplan to have any refreshments, but at the high noon wedding, especially when the bride is attended, a wedding breakfast is absolutely essential, however, as I preabsolutely essential, however, as I previously stated, it may be formal or quite informal.

the guests may number over fifty or so, small tables may be used, and these afford no end of possibilities for charming decora- al changes, and when retained in the systions.

Not more than six gnests should be seatdal table.

A beautiful and novel effect may he gained by having the bride's table made in the shape of a horseshoe, and so placed in the room that the party is seated on the outside of the shoe, and facing the room. This is not a difficult matter to accomplish, if one goes to a carpenter fortified with a diagram and dimensions, and orders table top made from any ordinary wood.

This is placed on three small narrow tables, one at each side and one in thecentre, the whole is then covered with white felt over which is fitted a damask cloth, the border being cut off and fitted so as to hang over the edge to the proper length. This is a rather difficult piece of work, but as the whole surface is covered with decorations, lace doilies, etc., the hanging border

is the most important point to adjust. Where the border is joined, lace insertion nay be used with good effect, or a border of lace may be sustained for the damask border.

In the curve of the horse shoe, palms and flowers are banked to the height of the table, and over the table several small flower bells are suspended and from each, festoons of flowers, smilax or asparagus grass are draped to the wall at the back, which should be decorated with screens covered with flowers and greeps.

The arrangement of the buidal table should be the same as for a formal luncheon, and any style of decoration preferred may be used as long as it is not too high or ornate, simple table decorations being the best form at present.

fast, which feat is accompanied with con-

Health and Beanty

There is a very common fallacy, gener ally believed, that one hour's sleep before midnight is worth two after it. Healthful sleep is good at any time and no one set of hours is better than another.

Many infirmities of the eyes of children have their foundation late no the early days in the nursery when evestiain was brought about by the injudicious use of colors and a carelest arrangement of light. Sleeping with the eyes buried in the pillow will bring wrinkles all around them and will produce that look of very old age that wrinkles bring into the face. Even a haby

who sleeps with its face in the pillow will wake up with a thousand wrinkles. The symptoms of eye strain are pain in

the temples, pain in the back of the head great distance or to read long at a time. The eyes become tired and vision blurred; a tendency to avoid light. The eyes are partly closed; there are twitchings of the lids; sick headache and dizziness. E e strain may cause chorea and other nervous diseases. It brings on neuralgia and headevery condition recited above, if brought about by defective vision or an abnormal during the reception. If there is no reception given after the glasses. The fitting of glasses is at times

Nothing except abundance of vigorous outdoor exercise so stimulates and insures the healthful action of the sequeeous system For formal wedding breakfasts, where as the Turkish bath. The normal constituents of perspiration are various salts and acids, which are subject to curious chemictem become active poisons. An excellent substitute for the Turkish bath is found in ed at each table, and special care should be bestowed in arranging the places at the bri-prices varying from \$5 to \$45. The cheapprices varying from \$5 to \$45. The cheaper ones are folding arrangements that cau easily be put away, and are so adjustable that no attendant is required. Many women object very much to going to a public Turkish bath, but have instead these little cabinets and employ a capable osteopath specialist or a massense, thus obtaining the luxury of a Turkish bath in their own homes. In case of extreme emaciation the bath should be followed by massage or cocoanut oil.

A Good Dinner Table Story

For three days I've been saving an appropriate story to tell at a dinner party, but as I am not dining out anywhere this week I may as well tell it now. The man who told it to me said he meant to tell it at a dinner next Thursday, and I think it's the duty of every woman to get ahead of a man every time she can. It's a story about a man in New Jersey, who invented a pro-cess for making near-Limburger cheese. I don't know what the process was because there are s me things it is just as well not to know, but whatever it was, it was cheap. He could make cheese for almost nothing at all, and as Limburger is strong on the market, he foresaw huge profits. He made up a lot of the cheese and decided to take it to New York, or maybe Philadelphia, to sell it, but when he came to consult the railroad company he found that it was going to cost more than he cared to pay to get his goods to market. He was a resourceful man, and this is the part of the story that charms me most. He packed The wedding cake may occupy a place directly in front of the bride, for it is quite the proper order of the day for the bride to cut the cake at the conclusion of the breakgame well, and made himself up for showed it, arose from his chair and

THE SCHOONER.

Where the Fore and After Beats the Square Rigger.

The ability of the schooner to meet e requirements of present day conitions, while the square riggers have een found wanting, can be readily inderstood when we take into considration the numerous advantages posused by the fore and aft rig that are ential to the ideal carrier.

of the blood making glands, and so builds operating expense, that prime factor up the body with sound flesh and strong muscle. "Golden Medical Discovery" a all transportation problems, is here educed to a minimum, for there is no contains no whisky, alcohol or intoxicatant notive power so cheap as the free in any form. winds of heaven and no other craft so well adapted to utilize and control this force. The sails are of handy form is as big an event to a country boy as a and can be readily handled from the minstrel parade to a town boy. deck by a handful of men or with steam power if desired. The schooner can sail several points nearer the eye of the wind than a square rigger is able to do.

Built on the old clipper model, they sail like witches and owing to their peculiar constructions can be readily loaded and discharged. They require but little ballast and having no heavy top hamper can, if necessary to the trade, take on immense deck loads. In the lumber traffic of the Pacific northwest we find these vessels leaving port with huge deck loads towering ten to fifteen feet above the rail. Occasionally they get caught in a blow and have to sacrifice a portion of the deck load, but where one meets such a mishap dozens reach their designations safely and land their cargoes intact .- James G. McCurdy in Outing Magazine.

A card sharp well known to the stewards of the great ocean liners was a passenger on a recent trip across. He received a line at Queenstown, which had the effect of keeping him out of the large games in the smoking room. He contented himself with penuchle and bridge at 25 cents a hundred points. On the evening before landing one of his bridge party, none of whom knew that he was a professional with a bad record, proposed changing the game to poker. "It's bad practice," said the card sharp, "to play poker with strangers. There's too much risk, but it's all right in this case." The others said there was no risk if a man had good sense and kept his eyes open. The deal fell to the professional, and when cards had been drawn by each man he said: "Now I'll show you how much you know, Mr. A, you have the winning hand. Mr. B, your three queens look good, but what show have they against Mr. C's four fives? And what good are they against A's four kings? Does it tally?

It did, and A said, "Well, it's my

derived from manure is in the liquids, and the farmer who depends upon the solids, permitting the liquids to waste will haul out to his land bulky material that will disappoint him when he harvests his crops. The liquids should be carefully saved.

establishments, and there is nothing really better than carbolic ointment for such cases. This may be purchased already prepared at any drugstore, or the dairyman can easily prepare it for himself by simply taking some vaseline, or even lard, and adding to it a very small quantity of the carbolic acid

-With all the remedies suggested for blight on pear trees, the difficulty still exblight on pear trees, the dimensity still ex-ists, and many pear orchards are destroyed every year. At one time it was believed that by keeping the orchard ground in grass the pear trees would eccape, but, while the rapid growth of the trees seems favorable to attack of blight, and, although the grass may retard attack yet although the grass may retard attack, yet the trees will succumb to the disease should it find its way into the orchard. The spraying of trees, or treating the trees at the roots, will confer beuefit, but there is no sure remedy for blight.

-Peas will probably bear deeper plant-ing then any other seeds. The crop de-lights in a cool, moist soil, and deep planting insures these conditions. It has been found, however, that making a furrow seven or eight inches deep, filling it with a mixture of soil and a proportion of fertil-izer, and planting the peas on this, two inches below the surface, produces better results than deeper planting. If the pea roots prefer to go down deep they will do 80, provided the gardener has prepared the so, provided the gardener has prepared the proper conditions. Peas may be planted at any time for a late supply.

-The currant and gooseberry worms that consume the leaves of the currant and gooseberry leaving the bushes bare of foligeoseberry leaving the bushes so much that age, will weaken the bushes so much that the berries will not ripen; even the bushes being sometimes killed by them. The worms may be poisoned by the use of helle-bore dissolved in water, the bushes being suraved with it. Take a tables poor of the bind about two and a half inches wide made up of verticle straps of half-inch vel-vet ribbon placed about a quarter of an inch apart. The edge of the band is finished with horizontal rows of soutache braid. A lovely gray marquisette gown has bands of the helleboro, add a quart of box water, and allow it to stand a few hours; then add to it a pailful of water, and spray the bushes well with it. An old broom will answer very well for ansain. The worm will answer very well for spraying. The worms are soon killed, and the poison will not last long. In a few days the berries may be eaten

--Manure heaps are responsible for many diseases that appear on farms. Even the well water may become contaminated, though the heap may be some distance from it. Typhoid fever and diphtheria have appeared in families living a mile or more from neighbors, and where it was apparent-ly imposeible for the families to be attack-A French scientist, who investigated diseases on farms in France, found that there was some relation between manure heaps and epidemics of diphtheria. Sta-tistics in Scotland and Prussia show that the rate of mortality from diphtheria is higher in rural districts. It is suggested that all manure should be kept in closed locations, having cement sides and bot-

At each cover, the flat silver is arranged, and in addition to the flowers and candelabra, (if artificial light is used) the well appointed breakfast table should contain tall compotiers, relish dishes, bonbon trays, and small fancy cut glass and silver dishes holding shreds of crisp celery, olives, salted -Carbolic salve should always be kept ready for use at the cow barn. Bruises and sores often occur in the best-regulated

The service of the breakfast should correspond with that of a formal luncheon, which has previously been given in detail in these columns, but will be gladly sent by "The Hostess" to any reader who is particularly interested, with an appropri-

ate menu for a formal breakfast, for June. The tables for the other guests should be arranged quite similarly to the bride's table, with the exception of the elaboration of floral decoration, and the shape of the table. These small tables should seat four or six persons, and round tables are far preferable to the square ones.

Regarding the buffet service for an afternoon wedding reception, the up-to-date manuer of arrangement is to have a table of generous proportions arranged in the centre of the dining room, covered with as handsome a cloth as one possesses, which should fall almost to the floor.

Pretty candelabra with white shades and candles, confectioner's pieces of nouget or spun sugar of appropriate design are per-missible, and effective ; cutglass dishes of olives, salted nuts, bonbons, also covered glass dishes for sandwiches, tall compotes for candied fruits, and several tall vases holding a cluster of Bride and Bridesmaid roses should make a pretty table.

Soutache is used on everything from gauze to cloth. Only the evening gown is immune from it, and it would not be safe to be too sure that it is not there. The dressmaker's ingenuity has revived for the present fussy styles all the garnitures known to the past and a host of others peculiar to this era.

One of the effective arrangements is a band about two and a half inches wide lovely gray marquisette gown has bands of this kind composed of pale blue velvet ribbon and outlined horizontally with blue

Big flat button effects of soutache put on around and around are another fancy. These are combined with braided or em-broidered designs.

An old time suggestion is seen in the binding of edges with bias bands of silk. A white chiffon gown ready for an Easter wedding was trimmed with tucked pale blue chiffon and Valenciennes lace. The bodice has one of the long mandarin arm-holes that under the arm has nothing what-ever to do with the sleeve. The sides of this armhole are apart at the waist line and this armhole are apart at the waist line and extend downward into side panels of a pol-onaise semblance. The armhole and the edges of the panels as well as the bottom of the polonaise are bound with a half-inch bias band of pale blue satin.

All sorts of little silk or cloth jackets or lacket effects, often sleeveless, to wear over lace bodices are covered all over with pat-terns traced in sontache.

the monruer's part with crape on his hat and black gloves on his hands, and thus accoutered started on his jour-Every time the train stopped he ney. walked forward to the baggage car and observed the baggage-car attendants getting fresh air at the door. Somewhere between two stations one of those attendants-I never heard them called anything but bag. gage smashers and I never cared for the term-came back into the car in which the mourner sat. Of course he saw the crape on the hat, and stopped to express his spmpathy.

"You traveling with-"' and he jerked his bead toward the baggage car ahead.

"Yes," said the mourner, sadly. "Apy relative?"

"She was my wife," answered the mourner in broken accent. The baggageman bad a kind heart.

"Well," he said, "if it's any comfort to you to know it, I can tell you one thing. She ain't in no trance."

Prizes for Ugly Girls.

An interesting showman in Milan, who has more than once organized successful beauty shows, recently struck out in a new line by arranging what might be styled an "ugly" show, whereat a number of women and girls competed for three prizes which were offered for the three ugliest competitors. And, strange to say, the show was a decided success, which goes to prove that, contrary to a common belief, there are some women sufficiently ugly to be conscious of their defect. There were fourteen competitors, and by

all accounts every one of them deserved a prize ; indeed, some one suggested that while considering to whom to award the prizes the judges had worn smoked glasses in order to save their feelings. However that may have been, the winner of the first prize—a young woman of twenty-four—was the wife of a local frame maker and the mother of five children.

In the German town of Haschmann it is an annual custom to award cash prizes to the ugliest girl of the year, also to the most crippled and to a woman of more than forty summers who has had at least two lovers at

summers who has had at least two lovers at different times, but lost them. These prizes are provided by the interest derived from a sum of money, left by a wealthy Haschmann philanthropist, and are really intended to encourage local men to marry the ugly, the crippled and the re-jected; but in this matter they do not ap-pear to be very effective, though the prize to the upliest girl generally amonnts to

to the ugliest girl generally amounts to about £15, and that to the crippled to some £12, while £10 usually falls to the woman of blighted affection.

-Hpker-I wonder why Columbus imagined the world was round? Pyker-Because it didn't give him a equare deal, I suppose.

-When a girl says she had a happy dream it either had to do with a foreign nobleman or a pearl necklace.

----Some people spend half their time seeking advice and the other half in dodging the consequences thereof.

Socialism don't mix well.

said: "Give the steward what I put in. This was an object lesson-don't play poker with strangers."- New York Tribune.

The Barbecue.

The word "barbecue" is derived from the Spanish word "barbacao" and is a native Haitian term for a wooden framework supporting meat or fish to be smoked or dried over a fire. In its popular sense it means a large social or political entertainment in the open air at which sheep or oxen are roasted whole and all the feasting is on a most liberal scale. Georgia is probably the native home of the barbecue and is called the Barbecue State. Who prepared the first barbecue is un-ALSO known. Deer, bear and other game constituted the meat roasted in the barbecues of fifty years ago .-- Cincinnati Enquirer.

The Butcher's Smock.

The butcher's smock was blue. It looked much neater than the white smocks of his friends, all smeared with dried blood. "Every butcher," said the man, "ought to wear a blue smock. Why? Because dry blood won't show on it. Dry blood turns bluish, and on a smock of this color it is invisible. I am descended from a long line of butchers, and from father to son the word has been passed down always to wear, for neatness' sake, a smock of blue."-New Orleans Times-Democrat.

Croutons.

To cut bread into dice before frying, if it is to be used as croutons, is not the most approved method. When done in this way it becomes very hard and indigestible. The bread should rather be cut into thin slices and then stamped out in circles a little larger than a quarter or cut into squares of about the same size or in oblongs two inches long and over one-half inch thick. These tossed into hot lard and taken out almost instantly in the frying basket are the most palatable.

Queer Marriages.

In southern India marriage with inanimate objects is not altogether unknown. A man who has lost two wives and wishes to marry another will go through a formal marriage ceremony with a plantain tree, which is afterward cut down. This stands for the third marriage, which is considered inauspicious, and the man feels free to make a fourth marriage with a third woman.

The Modern Version. "I want my boy to be able to earn his own living." "To earn it, Mr. Merger?" "Well, to get it."-Washington Her-

ald.
