One of the First Cases of Filibustering

in Congress. One of the first instances of filibustering occurred in 1805 just after the impeachment trial of the Hon. Samuel Chase, one of the associate justices of the supreme court. A quarrel arose over the payment of witnesses. The house of representatives would pass no

bill which provided for the payment of those summoned by Chase. The senate would pass no bill which did not, and a conference followed. Each refused to yield, and the bill was lost. John Randolph then attempted in

the closing hours of the session to have the witnesses for the managers of the trial paid out of the contingent fund of the house. But the Federalists were ready. They hurried from the room, and when the vote was taken the speaker announced no quorum Members were thereupon summoned from the lobby and committee rooms. Hardly were they in their seats when a message from the president was announced, and while the clerk was reading it the Federalists again left the room, so that when the resolution was a second time called up there was again no quorum. Once more the sergeant at arms went into the lobby. and once more the members came in. But an enrolled bill was reported, and while the speaker was signing it the Federalists a third time slipped out. The announcement of no quorum which followed was greeted with shouts of laughter. Randolph in a great passion desisted, and late on the evening of Sunday, March 3, 1805, the Eighth congress ended.-Baltimore American.

SCIENCE AND TEARS.

Weapon of the Heroine Coolly Analyzed by French Chemist.

One does not care to have one's tears analyzed like a patent food or medicine and to associate them with chemical substances, but we are nothing if not practical nowadays, and every shred of romance, poetry and sentiment is remorselessly wrenched from us for scientific purposes.

A French journal devoted to matters of this kind has been telling us not only of what tears are composed, but exactly the effect that is produced on brain and body when we shed them.

So henceforth when we read that the heroine's "beautiful eyes were suffused with tears," that "in a moment she was weeping passionately on his shoulder," we shall know that by a kind of shower bath arrangement a mixture of albuminoid, water and chemical substances was let loose at the back of her skull, thus dulling the nerve centers and really giving her relief.

However, it does not sound romantic. and mere man is likely to imagine that the fair one is really suffering doubly when all this happens.-Gentlewoman.

Not So Funny After All.

On one of the cruises out of Rockcrowds of visitors boarded the ship. One old grizzled farmer fell into the hands of a youngster from Montana. For the time being ventilators became the air were to hold up fog nets, the ropes were clotheslines, the engines ran by radium, and the Hartford was the fastest ship afloat.

The old man seemed deeply interested, especially in the chute for getting overboard, the legs and arms that might be adrift in action and the value for letting out whatever water might run into the ship. When he finally went over the side he was profuse in his thanks. Turning to his escort, he drew out his card, on which was engraved, "-----, Rear Admiral, U. S N., Retired," and said, "The old ship has changed since I commanded her."-Army and Navy Life.

The Whole Business.

A very young housekeeper went to market to purchase a spring chicken. After selecting one and inquiring the price she said: "Isn't 3 shillings rather high? The

poulterer in our road only charged me 2s. 9d. the other day." "With the feet on?" asked the sales-

"No. I believe, now you mention it, the feet were cut off." she replied.

with some hesitation. "I thought so," said the man at the stall, "When we sell a fowl here. ma'am, we sell it feet and all."-Lon-

don Scraps. Insect Notes.

The slow flapping of a butterfly's wing produces no sound. When the movements are rapid, a noise is produced which increases with the number of vibrations. Thus the house fly, which produces the sound of F. vior 335 times a second, and the bee. which makes a sound of A, as many as 26,400 times, or 440 times a second. A tired bee hums on E and therefore, according to theory, vibrates its wings only 330 times a second.

Experience.

Johnny-Smokin' cigarettes is dead sure ter hurt yer. Jimmy-G'on! Where did yer git dat idee? Johnny-From pop. Jimmy-Aw, he wuz jist stringin' yer. Johnny-No, he wuzn't stringin' me. He wuz strappin' me. Dat's how I know it hurts.—Philadelphia Press.

Beyond Him. "There's only one thing the armless wonder can't do with his feet," said the showman.

"What's that?" asked a spectator. "Put on his gloves," answered the showman.

HOLES IN GLASS.

The; Are Too Tiny to See, but Air Can Work Through Them.

Ordinary tumblers will hold water because the globules of water are too big to squeeze through the glass. But glass is as full of holes as a sponge. and air blows right through it because the specks of air are smaller than the

Put a bell into a big globe of glass. seal up the vessel, pump out all the air, then ring the bell inside, and you hear nothing. There is not air enough in the globe to carry a sound. But lay the globe aside for a month or so, and, no matter how carefully you have sealed up the neck, you will find that you then can hear the bell when you ring it. Air has got into that globe. Enough anyway to carry a sound has leaked in through the substance of the

The ordinary incandescent lamp is a glass globe with the air pumped out. and after a few months sufficient air leaks through to dim the light which comes from the thread of electrified charcoal inside.

We can make plenty of vessels to hold water, but nothing has been made which will hold air without any leakage. The air sneaks in through holes which are too small for the human mind to imagine.

In fact, everything leaks .- London

THE END OF THE WORLD. A Theory That It Will Come by Fire

Caused by Friction. As to the length of time the earth is

likely to last, the calculations are that it will not cease to be active for a good many millions of years, such activity not, however, necessarily supposing that life as we know it now will always be possible, the eventuality of a universal ice age being always a contingency that may occur again in the history of the globe.

It is interesting to note that in this connection a Swedish mystic called Stromberg has declared that the worl! would never know another ice age, but that it was now running out its cours. to the end. Its existence, he declared. would endure as long as fire burned in the earth's bowels-that is, until the whole mass shall have become solidified. The internal fires, he said, provided the link which maintained the earth in the sun's sphere of attraction When this attraction shall fail, the earth, according to the Swede, will cease to revolve and will fall away. only to disappear by fire caused by cooling down entirely will take some billions of years, the nervous person will note that there is really no immediate cause for alarm. - New York World.

Pepsin, Saliva and Gastric Juice. principal agent in the digestion of food, is a powerful solvent stored up in the walls of the stomach and only poured forth when its assistance is needed. When pure, this fluid land we ran into Castine, Me., where is perfectly neutral, neither acid nor alkaline, and appears to be unable to exert any action without the presence of an acid. Such acid is supplied in the gastric juice, secreted by the gastorpedo tubes, those "sticks" up in tric follicles covering the coating of the stomach. The saliva is merely for the purpose of moistening the food. thus preparing it for the action of the pepsin and gastric fluids.-New York American.

Shawls

An Indian or a Persian shawl use.l to be considered one of the finest feminine possessions in the world, and they were handed down from mother to daughter as prized heirlooms. But now if you gave a young woman even a very elegant shawl, costing possibly hundreds of dollars, as many did, she would turn up her beautiful nose at it and if she used it at all would make a portiere out of it for her cozy corner. She would never think of wearing it. even if it were the only thing she had

That Voice.

Before Marriage-"Oh, my darling. your voice is as musical to me as a vesper bell whose tones fall softly on the perfumed air. Speak again and say those words, my beloved, for I could listen to your voice until the stars are extinguished into everlasting night.'

After Marriage-"I've had enough of your clapper, old woman, and if you don't shut up I'll leave the house." -London Globe.

His Glasses.

Once that genial comedian Peter Dailey consulted an oculist about his eyes. His nose was small, and he couldn't keep on the glasses with which the oculist was trying to fi: him. "You are not used to glasses, brates its wings 21,120 times a minute, Mr. Dailey." said the oculist. "Oh. yes, I am," replied Mr. Dailey, "but not so high up!"

Wearing Apparel.

Customs Officer (to woman traveler from the continent)-I thought you said, madam, there was nothing but wearing apparel in your trunk. What about these three bottles of cognac? "Oh, those," said the lady, "are my night caps."-Tit-Bits.

Bulls.

"Ladies and gentlemen." said an irish manager to an audience of three. "as there is nobody here I'll dismiss you all. The performance of this night will not be performed, but will be re peated tomorrow evening."

Without danger danger cannot surmounted .- Publius Syruz.

We are apt to think of the dust that the simply an appoyance, and perhaps a source of disease, but the researches of scientists

dust to us in new lights. It appears that when the air is very thick and bazy it may contain dust particles to the number of from 10,000 to 20,000 in every cubic centimetre, while a cubic centimetre of very clear air may contain only

from a dozen up to a few hundred particles. The observations of the best authorities indicate that there is a relation between the quantity of dust and the temperature of the air. A great amount of dust, it is averred, increases the temperature in the daytime and checks the fall of temperature

The reason apparently is that the pres ence of dust serves as an obstruction to the free radiation of heat through the air. The sunbeams pass through very pure, clear air without lending much heat to it, and at night the heat received by the ground during the day readily escapes through the same air; but if the atmosphere is heavily laden with dust the sun's ravs are partially arrested by the particles which, becoming beated, in turn warm the air, and in like manner heat radiated from the earth at night is retained in the hazy layers of air

in contact with its surface. Without its atmosphere, which serves as
