-Contracts are now being made for the delivery of power from the new Raystown dam, on the Juniata, near Huntingdon, in four months. It was expected that the dam would be giving power for the generation of electrcity in the early fall, but the prolonged winter and the heavy rains of April, May and June held back the work somewhat. The dam will prodoce 1,750 horsepower in extreme drought, and 4,000 to 5,000 in the ordinary stages of water. The new dam is almost entirely owned by Huntingdon county men. Something like 100,000 tons of earth and rock were cut out in preparing for the bottom than 10,000 wagonloads of sand will have entered into the composition of the concrete used. The hauling of the cement from Huntingdon to the dam raises the cost of this commodity \$5,000.
