## TO REBUILD OLD SWEDE MILL

Bellefonte, Pa., July 28, 1916.

Original Building, Which Was Burned in 1835, Figured in Revolutionary War.

The Frankford Historical society, in pursuance of its plan to save to poster. ity all possible information in regard to early landmarks and points of historic interest in that section of Pennsylvania, has succeeded in restoring to the community the plan of an old Swede mill which burned in 1853, the Philadelphia American states.

The original mill was built by the Swedes before the arrival of Penn. A fire destroyed this ancient structure in 1835, when it was replaced by another, in which the plan of the original structure was preserved as nearly as possible. The second mill also was destroyed by fire, which is still remembered by a few old residents.

It was at the original mill that Lydia Darragh overheard British officers discussing plans to deliver an overwhelming attack upon Washington and his army at Whitemarsh and carried the information to an American officer in time to enable Washington to make preparations to counteract the attack.

Every available source of information was exhausted before the society obtained the desired information as to the plan and appearance of the old mill. Four drawings were made on information supplied by old residents, and the finding of additional information resulted in the acceptance of the plan submitted by Charles W Caster, one of the oldest members o. the society, who frequented the mill. in his youth.

According to his description, it was a two and one-half story structure with an overshot wheel on the northern end, where the race entered the building. The entrance to the mill also was at this end. A large hoist with dormer roof surmounted the western side.

## ZINC'S BIG PLACE IN WAR

Important Metal Has Advanced Price Until It Costs More Than Copper.

Zinc is so essential in war time that it has risen enormously in price in the last year. Costing originally only twofifths as much as copper, it now costs decidedly more than copper despite the fact that copper itself has sharply increased in value

Zinc is a constituent of cartridge brass and shell fuses, and is used also as a covering of iron barbed-wire fencing. In 1913 the United States, Ger many and Belgium were the leading producers of zinc.

Of the three, only

Length, eleven and one-half inches. The brilliant blue of the wings and tail combined with the black crescent of the upper breast and the crested

head distinguish this species. Range: Resident in the eastern United States and southern Canada, west to the Dakotas, Colorado, and Texas.

**BLUE JAY** 

Cyanocitta cristata

Habits and economic status: The blue jay is of a dual nature. Cautious and silent in the vicinity of its nest. away from it it is bold and noisy. Sly in the commission of mischief, it is ever ready to scream "thief" at the slightest disturbance. As usual in such cases, its remarks are applicable to none more than itself, a fact neighboring nest holders know to their sorrow, for during the breeding season the jay lays heavy toll upon the eggs and young of other birds, and in doing so deprives us of the services of species more beneficial than itself. Approximately threefourths of the annual food of the blue jay is vegetable matter, the greater part of which is composed of mast. i. e., acorns, chestnuts, beechnuts, and the like. Corn is the principal cultivated crop upon which this bird feeds. but stomach analysis indicates that most of the corn taken is waste grain. neither the farmer nor the fruit grow-Such noxious insects as wood-boring er has much to fear from the whitebeetles, grasshoppers, eggs of various crowned sparrow. The little fruit it caterpillars, and scale insects constitute about one-fifth of its food.

Health Commissioner Tells Why Men Are Bald.

In the "American Magazine" Dr. Arthur R. Reynolds, former Health Commissioner of Chicago, gives the following reasons for baldness:

"The hats that men wear are the cause of their baldness above the hat line. Women also wear hats, but their

hats are fastened to their hair and do not grip the head as men's hats do. All other causes of baldness such as All other causes of baldness such as infections, seborrhea, etc., affect both sexes alike and are, in fact, more diffifectious and communicable disease which is caused by the invasion of the cult to treat locally in women than in cult to treat locally in women than in men because of their long hair. "How does the hat affect the growth of hair in man? By compressing the arteries, the veins, the lymphatics, and to some extent the nerves that upply and provide the heir state of the microscope" supply and nourish the hair. It is not because the hat is hard or soft or that the WATCHMAN Office.

Length, seven inches. The only similar sparrow, the white-throat, has a yellow spot in front of eye. Range: Breeds in Canada, the

mountains of New Mexico, Colorado, Wyoming, and Montana, and thence to the Pacific coast; winters in the southern half of the United States and in northern Mexico.

WHITE-CROWNED SPARROW

(Zonotrichia leucophrys)

Habits and economic status: This beautiful sparrow is much more numerous in the western than in the eastern states, where, indeed, it is rather rare. In the East it is shy and retiring, but it is much bolder and 125 more conspicuous in the far West and there often frequents gardens and parks. Like most of its family it is a seed eater by preference, and insects comprise very little more than 7 per cent of its diet. Caterpillars are the largest item, with some beetles, a few ants and wasps, and some bugs, among which are black olive scales. The great bulk of food, however, consists of weed seeds, which amount to 74 per cent of the whole. In California this bird is accused of eating the buds and blossoms of fruit trees, but buds or blossoms were found in only 30 out of 516 stomachs, and probably it is only under exceptional circumstances that it does any damage in this way. Evidently eats is mostly wild, and the grain 199 eaten is waste or volunteer.

Infantile Paralysis in New York. On July 10 a report on infantile paralysis in Greater New York showed the total number of cases up to that date to be 1,083, with 238 deaths. A general cleaning-up campaign was inaugurated in the city, and a large

number of arrests were made for viohats are fastened to their hair and do 16 the number of cases had increased

Austria and Germany have consider able deposits of the ore in Silesia, Hungary, Carinthia and the Tyrol. As the zinc smelting furnaces of Great Britain are not well adapted for dealing with the Broken Hill concentrates, it buys the bulk of its supplies from the United States.

Moral Advice to the Young.

pravity is all the more difficult to dispravity is all the more difficult to dis-cern because its manifestations are checked and cloaked by public order, the head is bald low down in the back as enforced by law; by the necessity where the pressure has been upon the of having a good name; and even by vessels in this region. When the ordinary polite manners. And this is head is completely bald on top the ordinary polite manners. And this is not all. People commonly suppose that in the education of the young their moral interests are furthered by representing uprightness and virtue as principles generally followed by the world. Later on, it is often to their great harm that experience teaches them something else; for the discovery that their early years were the first to deceive them is likely to have a more mischievous effect on their morality than if these persons had given them the first example of ingenuous truthfulness by saying frankly: "The world is sunk in evil, and men are not what they ought to be; but be not misled thereby, and see that you do better."-From "The Basis of Morality," by Arthur Schopenhauer.

Change for Advertising. If attractive advertising has result ed in the larger use of less meritorious products what might such a campaign mean for meat? The dairymen have projected such a defensive and aggressive campaign. How attractively are some of the cereals pictured in the advertisements, and how appetizing appear some of the fruits marketed through the citrus growers' associations. What then of the possibilities of picturing an elegantly marbled browned-to-a-queen's-taste steak or roast, or of catching the color of a properly cured ham the flavor of which will never be forgotten? Such pictorial presentation would make strong the desire for a savory, strength building steak and increase the "hankering" for ham .- Breeders' Gazette.
