

FOR AND ABOUT WOMEN.

DAILY THOUGHT.

ST. VALENTINE'S LUNCHEON.
 "Tis well to be merry and wise.
 'Tis well to be honest and true,
 'Tis well to be off with the old love
 Before you are on with the new."

Valentine day suggests hearts and this can be worked out in decorations, place cards, fancy cakes, sandwiches and molded ices. Too much attention to this form is not as good as recognizing it in one or two courses which lend themselves particularly well to that design. An attractive centerpiece for a Valentine luncheon would be arranged as follows: Select pink roses as the motif of the decorative feature and shape them into two hollow hearts with a spray of fern here and there, to more strongly accentuate the color scheme.

In the center of the hearts stand a bisque cupid holding aloft a heart-shaped crown of pink roses intertwined with smilax.

The place cards would appropriately be heart-shaped valentines, with name and date on one side and a suitable sentiment on the other. In case the hostess is clever handed, instead of the valentines she can cut hearts from pink cardboard and with gold paint decorate them with tiny cupids or other symbols of the occasion.

To secure the proper effect in the dining-room, use rose pink candle shades, decorated with either tiny roses or with cupids and pierced hearts cut from crepe paper and applied on. The guests may be seated at one long table or at small tables, and the tables may be bare, if polished. In that case use doilies. If the first course consists of raw oysters or a fruit course, it may be placed before the guests are seated.

MENU

- Fruit Salpicon
- Hot Wafers
- Cream of Beet Soup
- Salted Nuts
- Olives
- Lobster Cutlets
- Birds, Heart Shaped, on Toast
- Curant Jelly
- Lattice Potatoes
- Cream Cheese and Olives on Lettuce
- Bread and Butter Hearts
- Cupid Ice Cream
- Loyal Heart Cakes
- Pink and White Kisses
- Coffee

FRUIT SALPICON.

For the fruit salpicon take six oranges, four grape fruit, one cupful of grated pineapple, four tablespoonfuls of rum and sugar syrup to taste. Mix the pulp of the oranges and grape fruit together, add the pineapple, the rum and the sugar syrup. Set aside to thoroughly chill. Serve in dainty glasses decorated with candied rose leaves. The glasses should stand on small plates. When serving the course set these small plates on larger plates before the guests come to the dining-room. These large plates remain on the table until exchanged with the hot ones holding the birds.

CREAM OF BEET SOUP.

Six cooked beets, two pints of milk, one heaping tablespoonful of flour, one heaping tablespoonful of butter, one teaspoonful of salt, one teaspoonful of pepper, and one slice of onion. Chop the beets and onion and simmer them in the milk until they are pulpy. Blend the butter and flour together, then add the beet mixture with the seasonings, stir till they boil for five minutes, then strain. Serve in cups with whipped cream on top.

LOBSTER CUTLETS.

One fine lobster or a canned lobster, two heaping tablespoonfuls of butter, half a cupful milk, one teaspoonful of lemon juice, one teaspoonful of salt, a few grains of red pepper, one egg, two tablespoonfuls of flour, one tablespoonful of cream, quarter-teaspoonful of pepper, some breadcrumbs and some fat for frying.

If fresh lobster is used, remove the meat from the shell, reserving the feelers and claws for garnishing. Chop the lobster. Blend the butter and flour together in a saucepan over the fire, then add the milk, boil two minutes, then add the cream, lemon juice, pepper, salt and red pepper; mix thoroughly and add the lobster, spread this on a plate and allow it to cool and firm, divide into twelve equal parts, form these into the shape of a mutton cutlet with a knife, beat up the egg and brush over each cutlet, then roll them in plenty of fine breadcrumbs; fry a light brown in plenty of smoking hot fat. Drain on soft paper. Stick into the thin end of each about an inch of the feeler or a piece of the stem of parsley. Dish in a ring and garnish with parsley.

BIRDS, HEART SHAPED ON TOAST.

Purchase good-sized squabs and carefully remove the legs and wings, then draw and wipe clean. Stuff the birds with bread crumbs browned in a frying pan with some butter and seasoned with a little onion and chopped parsley. Roast them and baste frequently. Cut some slices of bread a little larger than the birds, then toast them and dip them in the pan gravy. Serve the bird on the slices of toast. If one cannot procure squabs or any sort of small game an excellent substitute is made by cutting the breast from chickens without separating them down the front as usual. Serve with potatoes cut with a lattice cutter and cooked in plenty of smoking hot fat.

CREAM CHEESE SALAD.

For the salad, take two large Philadelphia cream cheeses and mash them with a wooden spoon, adding gradually one tablespoonful of French dressing, add half a cupful of chopped olives, press into a heart-shaped mold and when stiff turn out on a flat dish on which are some crisp lettuce leaves. Pour French dressing over all.

CUPID ICE CREAM.

One quart of cream, one vanilla bean, six yolks of eggs, one cupful of sugar and a little red coloring. Split the vanilla bean and put it into a saucepan with the cream, then bring slowly to boiling point. Beat up the eggs and sugar together, then

Fabric and Cord—a Comparison.

An Explanation of the Distinctive Characteristics in the Construction of These Two Types of Tires —Why the Cord Proves to Be More Resilient.

THE one sure standard by which to judge a tire is mileage. To the motorist the tire that gives the most miles of travel for the money is the best tire.

The car driver expects, of course, that his tires will be good looking and will be comfortable to ride on, but all standard makes of tires have long since adopted standards along these lines which make these points negligible when he purchases his tire equipment. So that the one question before him as he selects his tires is the question of mileage.

It is in regard to this very point of mileage that the cord tire is displaying its superiority over the fabric tire. A simple change in the method of arranging the strands of cotton which form the body of the tire carcass is accountable for the greatly increased durability given by the cord tire.

Since the day of the old solid rubber bicycle tire it has been quite natural that vehicle tires should be thought of as rubber tires because the outward appearance presents nothing but rubber. As a matter of fact, however, the modern tire can reasonably be described as a cotton tire in which the purpose of the rubber is principally to bind the cotton fabric together and to serve as a protection from the abrasive action of the road.

The so-called "fabric" tire is built up of layer upon layer of closely woven cotton fabric. The threads which go into this class of fabric are stout and tough and the finished product is a credit to American cotton mills.

But the very compactness which marks these fabrics is the real reason why fabric tires are inferior to cord tires. In the weaving process one thread is bent closely under and over other threads (See fig. 1) and this bending of the threads is the beginning of a process of breaking which becomes complete when the friction, caused by the use of the tire, is developed to a sufficient point. When the tire goes into use these cross threads begin to saw against each other and ultimately saw through, and the tires break down.

As an example of successful cord tire construction the United States Tire Co's "Royal Cord" Tire is used here. In this tire the cord fabric is in reality not fabric at all, but is a layer of separate cords, lying side by side, all running in one direction.

(See fig. 2.) It would be difficult to handle the cord fabric if it were not held together in some way, and for this reason delicate threads are woven through at intervals. These threads keep the cords together until the fabric is worked into the tire, but are so slender that they break down immediately when the use of the tire begins.

As a consequence, when the tire goes into use, there are no cross threads to set up a sawing process and cause friction.

Each layer or ply of this cord fabric is dipped in a rubber solution, so that each individual cord is completely covered with pure rubber. Each new layer that goes into the tire has its cords running diagonally across those of the layer beneath it (See fig. 3), thus giving strength to the carcass.

Careful tests made at the United States Tire Company's factories show that these cord tires are better able to stand shocks than fabric tires. Comparisons by means of the shockograph prove this conclusively.

The strength test showing the resistance against bruises and punctures also gives the verdict of superiority to the cord tire. A drop hammer weighing 100 pounds with a round head about an inch in diameter is dropped from various heights on the tire under full air pressure. This test shows that the cord tire has the strongest tire body, with the best defense against puncture.

Another feature of superiority is resiliency. The slender cords have free play in every direction and are capable of instantaneous adjustment or displacement when road obstructions are encountered. Besides, they are more buoyant, requiring less air pressure up to 20 pounds to the inch. With cord tires, 15 pound pressure to the inch is sufficient, and that reduction of 5 pounds is a big factor in increased riding comfort.

Why You Should Make a Will

To protect your loved ones.
 To safeguard your estate.
 By making a Will you can appoint the Bellefonte Trust Company as your Executor or Trustee.
 You can thus assure to your heirs the business management and financial responsibility which this institution affords.
 Your wishes can be observed in the distribution of your property, for if you do not leave a Will the law may divide up your possessions in a way that you might not desire.

How Have You Made Your Will?

Do not write your own Will. "Home-made" Wills are dangerous and often cause law-suits, because, when drawing a Will the law must be known, both as to wording and terms. Consult a lawyer today about the making of your Will and have him name the Bellefonte Trust Company to act as your Executor and Trustee.

Great Difference in Cost.
 Think of the difference in cost between taking a professionally prescribed medicine and taking Hood's Sarsaparilla. You know that ordinarily it is considerable. In times like these when everybody should be economical it is well worth saving.

Hood's Sarsaparilla affords the least expensive of all treatments for the common everyday diseases or ailments of the blood, stomach, liver or kidneys. Many physicians use the same substances as its ingredients for these diseases, and ailments, but these substances are better compounded in Hood's Sarsaparilla than they can possibly be in a prescribed medicine which is put up in a small way, with fewer facilities, and when the physician's fee is added costs a great deal more.

Hood's Sarsaparilla is prepared by skilled pharmacists in one of the largest and best equipped laboratories in the world, is wonderfully successful, and highly recommended to those who would recover health and strength with the minimum necessary outlay.

That Dose Should be Effective.
 "What are you treating me for, doctor?"
 "Loss of memory. You have owed me a bill of \$60 for two years."
Never Again.
 Miss Howles—I don't think you were really anxious to hear me sing. He (earnestly)—Indeed I was! I had never heard you before.
