Curious Facts About Oysters.

An oyster is wonderfully prolific, producing 30,000,000 young in one year. If they and their offspring all survived, they would, within a few years multiply so greatly as to fill up our great bays and sounds, like Long Island Sound, Peconic, Gardiners, Narragansett, Great South and Chesapeake bays, so that navigation would be prevented. The oyster shells would form solid land, as do the houses of the coral insects; but, instead of increasing, the destruction of the young oysters by their enemies is so great, together with the depletion of the natural beds by the demand for this delicious food by mankind, that, far from increasing, the supply has greatly depleted, and in many cases has threatened to become extinct. This was especially true in Great Britain and some places on the Atlantic Coast.

The sale of Joe Beckenbaugh was fairly well attended and things brought very good prices. Buffalo John bought the property.

Rev. Maneval preached his last sermon for the conference year at Rebersburg Sunday last. The Lord's supper was commemorated.

Henry Showers and wife have made frequent trips to Sugar valley to assist in caring for their son Ammon and family, who are all sick.

H. H. Stover is arranging his machinery for the manufacture of ice cream and will be in a position to cater to the people in anything that has a tendency to keep them cool during the warm summer days. He will make some improvements on his studio by spring and with his new photographic outfit will be in position to put out good work.

It seems that our Dutchman is adverse to shoveling snow, and does not take pride in having the walk in front of his home in passable condition. To teach him the necessity of a clean-up process, some busy lads last week shoveled a lot of snow up against his gate, and in order for him to get out of the yard, he was compelled to climb over the fence and clean up. We trust the first lesson will be sufficient for the "German."

A would-be wag entered a men's furnishing store and said: "Do you keep all kinds of ties here?" "Yes sir," replied the clerk.

"Then let me have a pigsty," said the witty one.

"Certainly, sir," answered the ready salesman. "Just bend down your head and I'll take your measure."

They couldn't be built now for twice \$71,000

When the talk turns from politics to railroads, and the traveler with the cocksure air breaks in with, "There's an awful lot of 'water' in the railroads," here are some hard-pan facts to give him:

American railroads have cost \$80,900 a mile—roadbed, structures, stations, yards, terminals, freight and passenger trains—everything from the great city terminals to the last spike.

A good concrete-and-asphalt highway costs \$36,000 a mile—just a bare road, not counting the cost of culverts, bridges, etc.

Our railroads couldn't be duplicated today for \$150,000 a mile.

They are capitalized for only \$71,000 a mile—much less than their actual value. Seventy-one thousand dollars today will buy one locomotive.

English railways are capitalized at \$274,000 a mile; the French at \$155,000; German \$132,000; even in Canada (still in pioneer development) they are capitalized at \$67,000 a mile. The average for all foreign countries is \$100,000.

Low capitalization and high operating efficiency have enabled American Railroads to pay the highest wages while charging the lowest rates.
