 wrong. It is the whale! Oh, yes, the whale is a mammal, not a fish, and he can jump out of the water to a height of 25 feet with the greatest ease. This is about twice as high as the tiger, who can manage about 12½ feet to 13 feet. A dog has been known to clear 10 feet, and the horse follows next with 7 feet 8½ inches. Man's record high jump was made in 1914 by a Californian, who reached 6 feet 75-16 inches. In 1913, the tremendous height of 5 feet 5¾ inches was attained for the standing high jump, though in 1802 e man reached 6 feet, with weights, at this jump. As regards the long jump, without weights, the record, 24 feet 11¾ inches, was made in 1901, and it has now stood for nearly twenty years. The longest jump backwards, with weights, is 12 feet 11 inches, and the holder of this record also holds that of the standing long jump, without weights, with 12 feet 1½ inches. Of animals, one might expect the kangaroo to hold the record, but he can only manage 15 feet—ten less than man—though talking of long jumps, how about the grasshopper? He can jump 200 times his own length. 	We wish to annou This is an introductory ad. ing business.
