MEDICAL.

Housework is a Burden

Woman's work is a weary one at best. But with backache and other distressing kidney ills life indeed becomes a burden. Doan's Kidney Pills have made life brighter for many Bellefonte women. Read what Mrs. J. T. Gordon, 130 E. Beaver St., Bellefonte, says: "I and another member of my family, have found great benefit from the use of Doan's Kidney Pills which were procured at Parrish's Drug Store. My trouble was a dull, constant backache which kept me in misery at times. Mornings I was so sore and lame I dreaded to begin my housework, for it was a burden. Doan's Kidney Pills taken according to directions restored my kidneys to a normal condition. I have had no return of the backache or kidney disorders. Doan's surely have my gratitude for the lasting benefit they brought me." (Statement given April 12, 1914).

On October 19, 1918, Mrs. Gordon said: "I gladly confirm my previous statement for Doan's Kidney Pills, as I certainly have found them to be all that is claimed for them. Doan's cured me, for which I am very thankful." Price 60c, at all dealers. Don't simply ask for a kidney remedy, get Doan's Kidney Pills—the same that Mrs. Gordon had. Early Hatched Chicks Give Better Returns.

Given the same feed, care and management, chicks hatched the first part of March will weigh more when they are four months of age than those hatched the first of May when they are four months old. The rate of growth of a chick is greater during the first four weeks of its life than at any other time. It never pays to hatch in the summer. The chicks should be hatched early enough so that they have a good start before hot weather sets in.

A second reason for hatching early is that the pullets will begin to lay in the fall when egg prices are highest. May and June hatched chickens usually do not lay heavily until egg prices begin to drop during the spring, say poultry specialists at The Pennsylvania State College.

Because early broilers bring a high price is another good reason why it pays to hatch early. By hatching in March and April the farmer is enabled to give his full time to other spring work.

For the egg breeds, such as Leghorns, Anconas, and the like, the chicks should be hatched not later than April 20th under Pennsylvania conditions. Probably the best time would be from April 1st to the 15th. In the case of heavier breeds such as the Rock, Wyandottes and Reds, the chicks should be hatched during the latter part of March and the first week in April.

The reasons for early hatching may be summed up as follows: Early hatched chicks grow rapidly and have more vigor; they are less liable to die

from lice and disease; they have a longer growing season; the pullets lay when the hens are moulting; they mature by early fall and thus lay high-priced eggs. Give early hatching a trial this year.
